

**Worksheet 1**

You have seen how it is possible to describe the separate ship operation activities for various types of container terminal operation: LoLo (discharge and loading), StoRo and RoRo (discharge only so far). Using the same approach, describe the sequences of activities for loading operations to a RoRo/StoRo vessel, using the following four equipment systems:

(a) Lift-trucks only (in a StoRo operation) :

(b) Lift-trucks (for stowing containers) and tractor-trailers (for quay transfer) in a StoRo operation :

(c) Lift-trucks (for the ship operation) and straddle carriers (for quay transfer) in a StoRo operation :

(d) Tractor-chassis, in a RoRo operation :
