

Sustainable Development of Forestry and Corporate Social Responsibility

Speaker: Zhou Xiongzhi, Managing Director of EverFirst Wisefund (Beijing)
Technology Co., Ltd.

Abstract of Speech

I. Opening Part

A brief introduction to EverFirst Wisefund Technology Co., Ltd. (Everfirst), its mission, its corporate social responsibility and its environmentally friendly and energy saving products and technologies for the sustainable development of the forestry.

II. Everfirst's Concept and Practices for Sustainable Development, Green Products and Green Job Opportunities.

1. Raw materials' sustainability. Processing and utilization technology on fast-growing planted woods, branch knot wood and remains can help work out the issue of raw materials for the industry in China and also protect the environment.

The data are as follows: 88 million m³ annual outputs of artificial plank and 120 million m³ wood consumption; 53 million hectares forest plantations in China, nearly 40% of forest plantations worldwide and the first in the world.

2. Protection of Manufacturing Environment. To solve poisonous gas, dust and noise in the manufacturing process, thus benefitting 2 million workers. To improve manufacturing efficiency and worker's income

3. Environmentally friendly products

Annually, Everfirst's 10 million m³ artificial planks reach the state environmental protection standards, reducing the emission of 2,000 tons of poisonous gases like formaldehyde while improving the working environment of furniture manufacturing and decoration industries and benefitting hundreds of millions of end-users.

4. To enhance the competitiveness of enterprises of artificial planks for future operations against economic crisis so as to guarantee the worker's employment opportunities.
