Including interactive CD-Rom  
Trilingual E/F/S

This valuable wide-ranging reference tool meets the ever-increasing demand for timely, accurate and accessible information on the rapidly changing world of work. Now in its 10th year, the **Key Indicators of the Labour Market (KILM)** offers the general user instant and uncomplicated access to data and analysis on the world's labour markets.

Harvesting vast information from international data repositories and regional and national statistical sources, this important reference tool offers data for over 200 countries for the years 1980 through to the latest available subsequent year. The **KILM** is a collection of 20 "key" indicators of the labour market that touch on employment and variables relating to employment (status, sector, hours, etc.), the lack of work and the characteristics of jobseekers, education, wages and compensation costs, labour productivity and working poverty. Taken together, the indicators give a strong foundation from which to begin addressing key questions related to productive employment and decent work.

With three formats available – publication, interactive software (CD-ROM) and online database – accessing the country-level data for the 20 key labour market indicators as well as the descriptive text explaining the indicators' use, definitions and basic trends is easier than ever. Also available in the **KILM** manuscripts are the latest world and regional estimates of labour force participation rates, employment-to-population ratios, status in employment, employment by sector, unemployment and youth unemployment rates, inactivity rates, employment elasticities and working poverty.

This edition also looks specifically at the current economic crisis.
