**Work for a brighter future: Global commission on the future of work**

New forces are transforming the world of work. The transitions involved call for decisive action. Technological advances – artificial intelligence, automation and robotics – will create new jobs, but those who lose their jobs in this transition may be the least equipped to seize the new opportunities.

Today’s skills will not match the jobs of tomorrow and newly acquired skills may quickly become obsolete countries.

**World employment social outlook: Trends 2019**

The report assesses the impact of both new and long-standing challenges on global labour market trends. Its analysis should also be useful in considering the recommendations in the Report of the Global Commission on the Future of Work (ILO, 2019) and its call for a new focus on the changing nature of employment and its place in economy and society, as part of a “human-centred agenda for the future of work”.

**Safety and working conditions in small-scale mining: The case of selected small-scale metallic mines in the Philippines**

The study examines the existing policies and regulations that govern mine safety and the working conditions of those engaged in the small-scale mining. Based on the findings of this study, it is recommended that safety and health policies and programmes should be formulated in consideration with the context within which the small-scale miners are situated.

**A descriptive study on safety and working conditions in selected large-scale surface mines in the Philippines**

The report presents a

The study seeks to examine policies and regulations that govern mine safety and analyze the working conditions of those engaged in the industry. Using qualitative data, the research results underscore that both employers and workers have duties and responsibilities to undertake to ensure safe and healthy workplaces.

Worker-paid migration costs in the Viet Nam-Malaysia corridor

The study seeks to shed light on the migrant worker-paid migration costs in an important migration corridor: Viet Nam to Malaysia. Viet Nam was selected for two reasons: First, high recruitment fees for Vietnamese workers have been reported in several migration corridors, including those to Taiwan (China) and the Republic of Korea and Malaysia, with studies finding that Vietnamese workers may be charged higher recruitment fees than workers of other nationalities for jobs in the same sector (Verité, 2014).

Social protection for migrant workers in ASEAN: Developments, challenges and prospects

This report provides an overview of the developments, challenges, and prospects of social protection for migrant workers in ASEAN. Based on extensive analysis of national and regional legal and policy measures, and a review of relevant international and human rights standards, unilateral standards, and bilateral and multilateral arrangements, it emphasizes the need for a comprehensive network of intra-ASEAN social security agreements.
