Improving the garment sector in Lao PDR: Compliance through inspection and dialogue -
Independent final evaluation

Quick Facts

Countries: Lao PDR
Final Evaluation: June 2017
Mode of Evaluation: Independent
Administrative Office: CO-Bangkok
Technical Office: LAB/ADMIN
Evaluation Manager: Anandon Menon
Evaluation Consultant: Chris Morris
Project End: August 2017
Project Code: LAO/13/01/IDA
Donor & Project Budget: IDA, $1,350,000
Keywords: Labour inspection, Labour administration, Workplace Compliance, Supply chains, Garment sector, Strategic Compliance, social dialogue, working conditions

Background & Context

Summary of the project purpose, logic and structure

The project aimed to improve working conditions, productivity and competitiveness in the Lao garment manufacturing sector by strengthening the labour inspection system to ensure compliance with national labour laws in line with international standards. It worked with the Ministry of Labour and Social Welfare (MoLSW) to strengthen the capacities of the Labour Management Department (LMD) to improve labour inspection in Lao PDR. The project also worked to improve knowledge of rights and responsibilities, and improve working conditions in garment factories through work improvement committees (WICs) and work improvement plans (WIPs), with the goal of improving competitiveness and productivity.

The project is funded by a multi-donor fund through the 2nd stage of the Trade Development Facility, administered by the National Implementation Unit (NIU) of the Ministry of Industry and Commerce, and available to Lao PDR through the International Development Association (IDA) of the World Bank. The development objective of the project was: “To improve compliance and working conditions and to increase competitiveness of the Lao garment industry.” The project had three immediate objectives:

- Immediate Objective 1: The capacity of the labour inspection system in Lao PDR is improved so that it can effectively undertake labour inspection functions for the benefit of workers and employers in the garment sector.
• Immediate Objective 2: Workers and employers in the garment sector are aware of their rights and obligations and understand how to achieve compliance.

• Immediate Objective 3: Factories improve working conditions and productivity through workplace cooperation using the Project advisory and training services.

Methodology of evaluation

The evaluation used a mainly qualitative methodology, combining a desk review of secondary data with skype calls, semi-structured interviews, and a short stakeholder rating survey. The evaluation was conducted by an external evaluator who had no prior connections to the project. A field visit of 5 days to Laos allowed for data collection from various stakeholders including MoLSW, the core group of Labour Inspectors, the Association of Lao Garment Industry (ALGI), Lao National Chamber of Commerce and Industry (LNCCI), the Lao Federation of Trade Unions (LFTU), the Garment Skills Development Centre (GSDC), employees at garment factories, donors, and various consultants and staff who had worked on the project. A stakeholder de-brief to present initial findings and discuss recommendations was held at the end of the evaluation mission.

Main Findings & Conclusions

Relevance

The project was found to be relevant to the needs of the stakeholders in Lao PDR. The project was initially designed to address issues of competitiveness within the garment industry through strengthening the capacities of the labour inspectorate to support the factories to improve working conditions, and worker and management knowledge of labour rights and obligations. The project has evolved to focus on strengthening the labour inspector system as a whole through using the garment factories as pilots for new policies, procedures and training. The strengthening of the labour inspectorate is very relevant to the needs of country as a whole, not just the garment industry. It aligns with Lao PDR’s strategic plans and its attempts to align with various international labour standards and the Sustainable Development Goals (SDGs). The project has responded effectively to the needs of the LMD, and to a lesser extent to the garment industry and its workers. The project has not been particularly effective at mainstreaming gender and thus responding to the specific needs of women who work in the industry, the majority of whom are under 25, poorly educated, and new to the capital.

The project aligned with ILO’s strategic priorities. It supported targets with the Lao PDR Decent Country Work Programme (DCWP), the Programme and Budget Outcomes for 2018-19, and various ILO conventions, in particular C.81.

Effectiveness

The project has achieved most but not all of its I.O.s, and questions remain about the long-term impact and sustainability of the gains made by the project. The project has strengthened the capacity of the LMD and improved the functioning of the labour inspectorate. Improvements in knowledge of labour rights and obligations have been made in the pilot factories, and there is evidence of at least some improvement in working conditions in many of the pilot factories. However, the scope of the gains in the factories is less than the original ambition of the project, as the project did not expand the number of pilot factories after the first year. The gains in knowledge and working conditions vary between factories, and it is not clear how well project gains have been disseminated among factory floor workers. It is not possible to identify whether productivity has improved or not as a result of the project.

The project has had the support of the tripartite constituents but would have been supported by better pro-activity from the LFTU, ALGI, and the LNCCI. Ownership of the project since the mid-term has improved, particularly from LFTU as they have become involved in more activities, but there is still a tendency
to see the project as owned by ILO and MoLSW, rather than a coordinated effort of all the parties. Progress towards achievements was often dependent upon government processes, and the volume of responsibilities of some key MoLSW staff delayed responses to requests and activities at times during the project.

Efficiency

The project budget was $1.3 million. The project will not utilize all of the budget. The project has used project resources in an efficient manner, with the exception of the purchase of a vehicle which has not been used due to a lack of budget for a driver. The distribution of resources between I.O.s is justified, and the project has been able to leverage the support of technical expertise in Bangkok effectively.

A judgement on the overall value for money of the project depends upon the actions taken to ensure sustainability by the project partners in the coming months. If the gains can be sustained, particularly by institutionalizing the policy changes in the LMD, then the impacts of the project should spread to sectors and workers beyond the immediate beneficiaries, and the value for money of the project should increase. However, if the necessary steps are not taken and so the impact is not felt beyond the short-term impacts during the project itself, it would be hard to justify the donor’s investment.

ILO should also consider if there are ways they can reduce the cost of expatriate staff for smaller projects. The cost of the CTA took up 36% of the budget. Whilst very effective, and needed for the project, it is a high cost, particularly compared to the cost of national staff. Cost-sharing expatriate positions by more than one project could address this issue.

Impact

The evaluation found the project had made a positive contribution to policy changes and updated labour inspectorate practices within I.O.1. The approval of Ministerial Decision 4277, the development of the labour inspection checklist and the requirement for its use to be mandatory during labour inspections, and the development of a labour inspection manual covering 7 key areas of labour inspection, have been good developments in the goal of establishing a functioning labour inspectorate that supports Lao PDR’s compliance with international standards and norms. The impact on the ground is yet to be felt significantly because the development and approval of the policy and guidelines took time.

Sustainability

The sustainability of the project, and by extension the overall judgement on success, will be dependent upon actions taken by the tripartite constituents, with the support of ILO, in the next few months and years. The major impact of the project has been in the LMD. The project has supported the development of policy and practical changes which give the possibility of a strong and effective labour inspectorate developing in the coming years. The changes could allow for the inspectorate to reach not just the garment industry, but also other key industries in Lao PDR, such as construction, mining, agricultural, and tourism. However, to achieve this, MoLSW needs to ensure their strategic plan is finalized, provincial inspectorate plans which complement the national plan are developed and implemented, a suitable budget for the LMD is secured, the information management system is finalized and operationalized, and clear lines of reporting for the Labour Inspectors are finalized in a manner which provides mentoring, back-up, and management. The Government of Lao PDR will need to support regulatory enforcement as well. This is a challenge which impacts the ability of the Labour Inspectors to take enforcement action. If this is addressed and the above actions are taken, then the policies and tools put in place by the project should prove sustainable.

ALGI and LNCCI have also been involved in training during the project, and their awareness of labour
inspection and labour law has increased. However, more pro-activity by the garment sector is needed to take on tasks necessary for compliance which should be the responsibility of the garment sector and not the Labour Inspectors.

**Gender Concerns**

Although some gains have been made during the project, awareness of gender equality and issues such as sexual harassment remain low. Project participants have received training on gender equality, and the labour inspection checklist contains sections on gender and other forms of discrimination, which is a positive development. However, the evaluation gave a clear impression that stakeholders do not consider these issues to be particularly serious or widespread, despite the factory survey consultant being privately told of a number of serious issues.

The project did not mainstream gender in the manner laid out in the PRODOC. The needs assessment at the start of the project makes only fleeting references to gender concerns, and the project has not supported the factories in developing policies on sexual harassment.

Given the low baseline the project started at, the gains that have been made should be welcomed. It is also not surprising that intentions such as helping factories develop policies on sexual harassment could not be completed. Simply ensuring that training could be given to factory employees is a start. However, it would be wrong to say the project did all it could have on gender issues. For future projects, it would be advisable to have gender mainstreaming issues as a specific output or outcome of the project, and also to identify a women’s organization as an implementing partner either during the design or early stages of implementation of the project.

---

**Recommendations**

1. Ensure the provinces develop plans for labour inspections which complement the national labour inspection plan
2. Identify who will mentor and manage the Labour Inspectors after the project has ended. Clarify reporting lines.
3. Finalized the database and develop standard operation procedures listing responsibilities, including what analysis will take place.
4. Identify ways to strengthen the capacity of the Labour Inspectors to conduct training.
5. Be more flexible on visits (especially visits which include training.) Schedule at times which are easiest for workers to attend.
6. Authorise other partners to support Labour Inspections. LFTU, ALGI, and LNCCI all have something to offer the labour inspection process.
7. Strengthen presence of LFTU in factories by ensuring LFTU lead training, promote collective bargaining, and support the separation of management from Union leaders.
8. Identify who will lead the WIC process.
9. Support in developing case studies of emerging good practices to help sell the project to new stakeholders
10. Try to include support for Labour Inspection in new project in different sectors. There are synergies to other work; rural development, OSH, women’s empowerment.
11. Consider a specific objective on gender equality. Conduct a stakeholder analysis at the start/design stage of projects to identify women’s groups that could be an implementing partner for the project.
12. Review how ILO can provide more continuity for projects and staff for stand-alone project, considering the lack of a country office.
13. If vehicles are included in a project, ensure either budgeted for a driver or driving requirement included in TORs. Review process of handing over vehicles in similar situations.
