## Introduction

Your role as a Data Coder is critical in the successful dissemination of accurate and timely data. Your job is to convert answers to specific responses given by the interviewee into numeric codes. These codes enable us to analyze and report more easily and precisely on the data we have collected.

Before the questionnaire reaches you, it will have passed through the hands of the enumerator in the field who will have spent considerable time and effort collecting the responses from the interviewee. It will then have been checked by a Field Supervisor, a Zone Supervisor and a District or Assistant District Supervisor, and perhaps an Editor.

Your's is the final act before the questionnaire is scanned into a database and analyzed. It is very important that after all the hard work which has gone into collecting and editing this data, that you diligently perform your job.

Your's is a highly specialized job, and this workshop is specifically designed to give you the knowledge and information necessary for you to perform well as a Data Coder. You should be aware of the other people in your office, and in neighbouring offices, as these people will be a good source of support, and you should foster an environment of knowledge sharing and problem solving.

## How to Record Codes in the Questionnaire

To record the code in the questionnaire you will write clearly and legibly in 2B pencil only, the numbers in the grey boxes. These grey boxes indicate that they are to be completed by you the coder (in section 9 of the Person questionnaire, the enumerator may also fill in the code if it is one of the five countries listed). In addition to writing the numbers, for certain questions you will also be required to shade in bubbles which relate to those numbers. In the example below, the code being entered is 123. Because there are four boxes for the code, and only 3 numbers to enter, you leave the first box empty. You then write the numbers clearly in the other boxes, and shade the appropriate bubbles in the row.

## Economic Activity Codes: ISIC and BCEA

The following table lists the description of many economic activities, and the corresponding two numeric codes that we use to analyze this data. The code on the left, in the first column, is the International Standard Industrial Classification of All Economic Activities (ISIC) version 4, which is a United Nations system of classification. The column on the right lists the BCEA code, which is the Belize Classification of Economic Activity, which as the name suggests is specific to Belize.
