

What is it?

i-eval AI Assistant is an AI-powered chatbot that marks a transformative step in how we access, analyse and use evaluative knowledge. It is a user-friendly tool that is embedded in *i-eval* Discovery - ILO's public dashboard holding over 1700 evaluation reports, nearly 3000 lessons learned, 1600 good practices and over 3000 recommendations. The tool was developed in close collaboration between EVAL and INFOTEC.

The benefits

i-eval AI Assistant moves us beyond reading and analysing hundreds of evaluation reports to receiving on-demand, needs-based, quality-oriented and source-cited evaluative insights. This will help ILO develop stronger project designs, implement responsive projects on the ground, inform decision-making at all levels, and more – all in a fraction amount of the time. Using evaluative evidence has never been easier!

i-eval AI Assistant

In less than 20 seconds, receive coherent and intelligent content based on evaluative evidence that can easily be applied to project design, implementation, strategies, policies, decision making, communications – and more!

Who should use it?

ILO staff who are responsible for:

- designing or improving new or existing projects
- implementing projects and are keen to use evaluative evidence from similar projects
- preparing briefs or speeches on the ILO's work in the field and what we have learned
- shaping policy and thematic topics and want to complement their research with evaluative evidence.

Rollout

We are inviting 300 ILO staff to test the pilot phase before wider deployment. To be among the first to join the roll-out group, please contact eval@ilo.org

What we ask of you

- Explore *i-eval* AI Assistant - ask prompts based on your needs
- Use the information to help inform your work
- Provide your feedback
