

**Global Dialogue Forum on the Adaptability of
Companies to Deal with Fluctuating Demands
and the Incidence of Temporary and Other Forms of
Employment in Electronics**

Geneva
9–11 December 2014

Proposed points for discussion

1. How do enterprises adapt to fluctuating demands, which may be caused, among other things, by technological innovation, shorter product cycles and fast-changing customer demands?
2. Adaptation to fluctuating demands often manifests itself in high incidence of temporary and other forms of employment. What are the effects of this situation on the enterprises? What are the effects of this situation on the workers?
3. What solutions could be identified to address the issues surrounding the use of temporary and other forms of employment to enterprises and workers and how could decent work be promoted, contributing to a more sustainable industry?
4. Recommendations for future actions by the International Labour Organization constituents and the International Labour Office with regard to the sector.
