Overview

ABSTRACT

The employment/unemployment data are required at very short intervals to monitor the program made in the employment generating policies of the government. To satisfy this need, Sri Lanka Labour Force Survey was designed as a quarterly basis survey to measure the levels and trends of employment, unemployment and labour force in Sri Lanka. Thus the survey is repeated four times each year since the first quarter of 1990.

Key objectives of the survey

- To study the economically active / inactive population
- To analyze employment by major industry group and employment status
- To determine unemployment rates by level of education and by age group
- To study the informal sector employment
- To determine the underemployment rates by sector and by major industries

KIND OF DATA

Sample survey data [ssd]

UNITS OF ANALYSIS

Individuals from the population aged 10 years or more

Scope

NOTES

The scope of LFS 2011 includes the following key sections :

1. Identification Information
2. Control Data
3. Personal Information
4. Information on Labour Force Identification and Personal Information are as follows:-

Identification Information - Address, Province, District, D.S. Division, G. N. Division, Sector, Name of MC/UC/PS - Name of Ward/Village/Estate, Census Block Number, Sample Reference Number - Survey Quarter, Number of households, Name of the Head of the household - Identifications of Interviewers & Supervising Officers Personal Information - Relationship to Head

of Household, Gender, Age, Ethnic Group, Religion, Marital Status - Educational Attainment, Attendance at Schooling or other Educational Institution - Professional / Technical Training, Persons who are working abroad

Sampling

Sampling Procedure

Sampling plan and the sampling frame

Two stage stratified sampling procedure is adopted to select a sample of 17,620 housing units to be enumerated at the survey. The master sampling frame prepared for 2001 - Census of Population and Housing is used as the sampling frame for the sample selection of LFS in 2011. This main frame was updated after the Tsunami incident in 2007 using quick count method.

Sample size

At the beginning the sample size was 2,000 housing units per quarter in areas other than North and East, and the sample size was increased to 4,000 housing units per quarter in 1996 and continued thereafter. However, in 1992 and 1997, an annual sample of 20,000 housing units was selected to give reliable estimates by district level. In 2004 again 20,000 housing units were selected for the survey. However, in order to provide district level estimates precisely, it was decided to use 20,000 - 25,000 housing units as the annual sample from 2006. As such, in 2011, the annual sample of 17,620 housing units were selected.

Sample Allocation

In 2011, 1,762 Primary sampling Units (PSU's) are allocated to each district and to each sector by using the Neymann allocation method which considers the variance of unemployment rate as usually. The allocated sample for each district then equally distributed among 9 months. Table 2.1 on page 3 of the LFS Annual Report 2011 gives the sample distributions by district for year 2011.

Selection of Primary Sampling Units (PSU)

Primary sampling units are the census blocks prepared at the Census of Population and Housing - 2001. The sample frame, which was updated after Tsunami has been used for the selection of primary sampling units.

Selection of Secondary Sampling Units (SSU)

Secondary Sampling Units are the housing units in the selected 1,762 primary sampling units (census blocks). From each selected primary sampling unit 10 housing units (SSU) are selected for the survey using random sampling method.

Deviations from Sample Design

In 2009, the field work of the survey for the year 2011 was done in all twelve months in 2011. Even though it was planned to conduct the labour force survey in Northern and Eastern provinces, the survey could not be conducted properly in Northern province due to the prevailing conditions. In year 2011 the survey was carried out in Eastern province successfully as in 2009. Therefore, this report is based on an annual sample of 20,250 housing units, excluding only Northern province providing national, provincial and district level estimates with a stipulated standard errors of labour force characteristics as reported in the relevant reference periods of each 12 months of the year 2011. This survey covers persons living in housing units only and, it excludes the institutional population.

Questionnaires

Overview

Survey Schedule Current survey concepts and methods are very similar to those introduced at the beginning of the survey in 1990. However, some changes have been made over the years to improve the accuracy and usefulness of the data. Beginning in January 2006, some significant improvements were made to the labour force survey schedule in order to fulfill the requirements of its users and also to provide additional information for the planning purposes. This was done after carefully reviewing of the LFS schedule with the technical assistance provided by the Economic and Social Commission for Asia and the Pacific (ESCAP) Adviser. The revision was made focusing on literacy, household economic activities, informal sector employment and underemployment etc. This revised version of the questionnaire has been using since first quarter, 2006.

Data Collection Notes

The field work of the survey for the year 2011 was done in 9 months from January to October 2011. Listing operation was also staggered over a period of 9 months starting from November 2010 to August 2011. For each primary sampling unit, updating was done, about two months prior to the scheduled interviewing. As such, for example, the census blocks which were surveyed in January, were updated in November.

Statistical officers of the DCS were involved in the listing operation prior to the survey and also in the survey data collection operation. Each statistical officer is responsible to carry out all statistical activities in a Divisional Secretariat to which she/he is attached. These officers were given training before they were entrusted with the survey operations. A Deputy Director/Senior Statistician/Statistician is attached to each District Secretariat as the in charge of statistical activities in that district

Supervision

Regular field supervisions were carried out throughout the year to check the concepts and definitions are being used by the enumerator accurately.

Data Processing

Other Processing

Data was processed by district -wise batches and stored in separate files. Data processing included the following steps.

1. Counting and accepting the filled questionnaires by the DP Division
2. Do a visual check for completeness
3. Preliminary editing and marking codes
4. Entry of data
5. Run edit program for each District batch
6. Produce error report and return to the Survey office
7. Correction of errors on the report
8. Change incorrect data using the corrected error report
9. Re-run the edit program and repeat the error correction procedure
10. Produce final report on clean data with a backup of clean data. After all batches are processed, all data files were combined together and then the following steps are completed for all data files:
 - 11) Re-coding of variables needed for analysis
 - 12) Adding of sample weights
 - 13) Tabulations

Data Appraisal

Estimates of Sampling Error

The estimation procedure is given in the section 2.6 in the Annual Report. The Annual Report is attached in the External Resources Section.

Other forms of Data Appraisal

The adjustments for non-response is given in the section 2.7 in the Annual Report. The Annual Report is attached in the External Resources Section.
