PAK\_2013\_LFS\_v01\_M\_ILO

## Overview

---

### ABSTRACT

The major aim of the survey is to collect a set of comprehensive statistics on the various dimensions of country's civilian labour force as a means to pave the way for skill development, planning, employment generation, assessing the role and importance of the informal sector and, sizing up the volume, characteristics and contours of employment. The broad objectives of the survey are as follows:

- To collect data on the socio-demographic characteristics of the total population i.e. age, sex, marital status, level of education, current enrolment and migration etc;
- To acquire current information on the dimensions of national labour force; i.e. number of persons employed, unemployed, and underemployed or out of labour market;
- To gather descriptive facts on the engagement in major occupational trades and the nature of work undertaken by the institutions/organizations;
- To profile statistics on employment status of the individuals, i.e. whether they are employers, own account workers, contributing family workers or paid employees (regular/casual);
- To classify non-agricultural enterprises employing household member(s) as formal and informal;
- To quantify the hours worked at main/subsidiary occupations;
- To provide data on wages and mode of payment for paid employees;
- To make an assessment of occupational health and safety of employed persons by causes, type of treatment, conditions that caused the accident/injury and time of recovery; and

### KIND OF DATA

Sample survey data [ssd]

### UNITS OF ANALYSIS

- Household
- Individuals/ persons aged 10 years and above

## Scope

---

### NOTES

The Labour Force Survey provides data on (a) age, sex, marital status, literacy, level of education and migration of the population, (b) dimensions of country's labour force,

such as (i) employed labour force classified by, industry, formal & informal sectors, occupation, employment status, hours worked and level of education,

(ii) occupational safety and health information of the employed persons, and (iii) unemployed labour by level of education and previous experience.

### TOPICS

Topic	Vocabulary	URI
Household identification (including geographic area identification)	ILO	
Unemployment	ILO	
Underemployment	ILO	
Field operations	ILO	
Household composition and demographic (status, gender, sex, literacy, education,..)	ILO	
Current activity of all household members (10 years and over)	ILO	
Occupational injuries (all employed persons)	ILO	
Employment	ILO	

## Coverage

### GEOGRAPHIC COVERAGE

National coverage

The survey covers all urban and rural areas of the four provinces of Pakistan defined as such by 1998 Population Census, excluding Federally Administered Tribal Areas (FATA) and military restricted areas.

The population of excluded areas constitutes about 2% of the total population.

All sample enumeration blocks in urban areas and mouzas/dehs/villages in rural areas were enumerated except 737 households due to non contact and refusal cases in urban and rural areas.

However, the number of sample households (40,747) enumerated as compared to total sample size (41,484) is high as response rate is (98.2%).

### UNIVERSE

The universe for Labour Force Survey consists of all urban and rural areas of the four provinces of Pakistan defined as such by 1998 Population Census excluding FATA and military restricted areas.

The population of excluded areas constitutes about 2% of the total population. The following groups were also excluded non-settled population, persons living in institutions and foreigners.

# Sampling

## Sampling Procedure

---

**Sample Design:** A stratified two-stage sample design is adopted for the survey.

**Sampling Frame:** Pakistan Bureau of Statistics (PBS) has developed its own sampling frame for urban areas. Each city/town is divided into enumeration blocks. Each enumeration block is comprised of 200 to 250 households on the average with well-defined boundaries and maps. The list of enumeration blocks as updated from field on the prescribed proforma by Quick Count technique in 2013 for urban and the list of villages/mouzas/dehs or its part (block), updated during House Listing in 2011 for conduct of Population Census are taken as sampling frames.

Enumeration blocks & villages are considered as Primary Sampling Units (PSUs) for urban and rural domains respectively.

### Stratification Plan

**Urban Domain:** Large cities Karachi, Lahore, Gujranwala, Faisalabad, Rawalpindi, Multan, Sialkot, Sargodha, Bahawalpur, Hyderabad, Sukkur, Peshawar, Quetta and Islamabad are considered as large cities. Each of these cities constitutes a separate stratum, further sub-stratified according to low, middle and high income groups based on the information collected in respect of each enumeration block at the time of demarcation/ updating of urban area sampling frame.

**Remaining Urban Areas:** In all the four provinces after excluding the population of large cities from the population of an administrative division, the remaining urban population is grouped together to form a stratum.

**Rural Domain:** Each administrative district in the Punjab, Sindh and Khyber Pakhtunkhwa (KP) is considered an independent stratum whereas in Balochistan, each administrative division constitutes a stratum.

**Selection of primary sampling units (PSUs):** Enumeration blocks in urban domain and mouzas/dehs/villages in rural are taken as Primary Sampling Units (PSUs). In the urban domain, sample PSUs from each ultimate stratum/sub-stratum are selected with probability proportional to size (PPS) method of sampling scheme. In urban domain, the number of households in an enumeration block by Quick Count technique in 2013 and village or its part (block), updated during House listing in 2011 for conduct of Population Census are taken as sampling frames for rural domain is considered as measure of size.

**Selection of secondary sampling units (SSUs):** The listed households of sample PSUs are taken as Secondary Sampling Units (SSUs). A specified number of households i.e. 12 from each urban sample PSU, 16 from rural sample PSU are selected with equal probability using systematic sampling technique with a random start.

**Sample Size and Its Allocation:** A sample of 41,484 households is considered appropriate to provide reliable estimates of key labour force characteristics at National/Provincial level. The entire sample of households (SSUs) is drawn from 2887 Primary Sampling Units (PSUs) out of which 1710 are rural and 1177 are urban. The overall sample has been distributed evenly over four quarters independently. As urban population is more heterogeneous therefore, a higher proportion of sample size is allocated to urban domain. To produce reliable estimates, a higher proportion of sample is assigned to Khyber Pakhtunkhwa and Balochistan in consideration to their smallness. After fixing the sample size at provincial level, further distribution of sample PSUs to different strata in rural and urban domains in each province is made proportionately

# Questionnaires

## Overview

---

The questionnaire consisted of 10 sections.

To keep current with best practices, the questionnaire was revised in 1990 to include probing questions on marginal economics activities, likely to be carried out mostly by women and tend to go unrecorded with conventional questions. The questionnaire was further improved in 1995 to reckon with the size and composition of migration and informal sector. The scope of the survey was extended in 2001-02 to take the stock of occupational safety and health of employed persons. The questionnaire was further articulated for undertaking 1st quaterly LFS 2005-06. This practice has since been continuing.

## Data Collection

### Data Collection Dates

Start	End	Cycle
2013-07	2014-06	N/A

### Data Collection Mode

Face-to-face [f2f]

### Data Collection Notes

#### Field Operation

FBS is the national statistical organization responsible for collection, processing, compilation and dissemination of statistics. It has 34 Regional/Field Offices located all over Pakistan. These offices are equipped and manned with regular and trained field staff for the collection of data from the field.

#### Method of Data Collection

Data are collected by direct interview method. Generally, the head of household is chosen to provide information about all members of the household. In case of his non-availability at the time of interview, some other informed member of the household down the line is interviewed.

The total sample for the year is evenly distributed for enumeration on quarterly basis to offset the effect of seasonal variations. The information collected however relates to the week preceding the date of enumeration.

### Questionnaires

The questionnaire consisted of 10 sections.

To keep current with best practices, the questionnaire was revised in 1990 to include probing questions on marginal economics activities, likely to be carried out mostly by women and tend to go unrecorded with conventional questions. The questionnaire was further improved in 1995 to reckon with the size and composition of migration and informal sector. The scope of the survey was extended in 2001-02 to take the stock of occupational safety and health of employed persons. The questionnaire was further articulated for undertaking 1st quarterly LFS 2005-06. This practice has since been continuing.

### Data Collectors

Name	Abbreviation	Affiliation
Federal Bureau of Statistics	FBS	Government of Pakistan

### Supervision

It has 34 Regional/Field Offices located all over Pakistan that are equipped and manned with regular and trained field staff for the collection of data from the field.

For quality control, supervisors from Regional/Field Offices and headquarter, make frequent field visits to keep the collection process on track.

Soon after data collection, the supervisors edit, check and clean the filled-in questionnaires manually for consistency and completeness and refer back to field where necessary.

## **Data Processing**

### **Data Editing**

---

Editing is done at headquarter by the subject matter section. Computer edit checks are applied to get even with errors identified at the stage of data entry.

The relevant numerical techniques were used to eliminate erroneous data resulting from mistakes made during coding. The survey records are further edited through serie of computer processing stages.
