Overview

ABSTRACT

The main objective of the survey is to update and expand the labour force statistical baseline, fully capture and analyse the employment pattern. The survey results will provide an importance reference for policy and decision makers, business entrepreneurs, analysts and government officers to develop as well as monitor and assess the implementation of government policies and programmes on employment promotion and poverty and unemployment reduction and support the effective labour market. Accordingly, the survey aims at collecting the comprehensive set of data from households to estimate employment and unemployment characteristics which capture the seasonal variability, location, social and economic activities in accordance with the definition and methodology of ILO.

Scope

NOTES

- Personal characteristics
- Education and training
- Current activities
- Availability for more work
- Unemployment
- Usually active population
- Past employment record

UNIVERSE

The survey was designed to interview a representative national sample of about 7008 households from Ulaanbaatar and urban and rural areas of 4 regions that was deemed sufficient to collect reliable data on employment and unemployment and child labour. At this level of disaggregation the sample would be sufficient to produce estimates of high levels of precision in respect of selected employment characteristics.
