Overview

ABSTRACT
The QLFS sample covers the non-institutional population except for workers' hostels. However, persons living in private dwelling units within institutions are also enumerated. For example, within a school compound, one would enumerate the schoolmaster's house and teachers' accommodation because these are private dwellings. Students living in a dormitory on the school compound would, however, be excluded. The Labour Force Survey frame has been developed as a general-purpose household survey frame that can be used by all other household surveys irrespective of the sample size requirement of the survey. The sample size for the QLFS is roughly 30 000 dwellings.

Sampling

Sampling Procedure

The QLFS frame has been developed as a general purpose household survey frame that can be used by all other household surveys irrespective of the sample size requirement of the survey. The sample size for the QLFS is roughly 30 000 dwellings per quarter. The sample is based on information collected during the 2001 Population Census conducted by Stats SA. In preparation for the 2001 Census, the country was divided into 80 787 enumeration areas (EAs). Stats SA's household-based surveys use a Master Sample of Primary Sampling Units (PSUs) which comprises of EAs that are drawn from across the country.

The sample is designed to be representative at the provincial level and within provinces at the metro/non-metro level. Within the metros, the sample is further distributed by geography type. The four geography types are: urban formal, urban informal, farms and tribal. This implies, for example, that within a metropolitan area the sample is representative at the different geography types that may exist within that metro. The current sample size is 3 080 PSUs. It is divided equally into four sub-groups or panels called rotation groups. The rotation groups are designed in such a way that each of these groups has the same distribution pattern as that which is observed in the whole sample. They are numbered from one to four and these numbers also correspond to the quarters of the year in which the sample will be rotated for the particular group.

Response Rate

Response rate by province
Province Jan-March 2009
Percentages (%)
Western Cape 84,5
Eastern Cape 96,9
Northern Cape 89,7
Free State 94,5
KwaZulu-Natal 95,7
North West 95,2
Gauteng 88,2
Mpumalanga 97,2
Limpopo 98,6
The response rate in South africa for the Quarterly labor Force survey from january to march 2009 is equal to 93.1%.

Weighting

Stats SA updated the QLFS results (2008-2013) to reflect the new population benchmarks from Census 2011. Although the weighting changes are not clearly documented by Stats SA, users are advised to remain aware of these slight calibration differences between the previous version and the current (revised) data version when employing weights.

Questionnaires

Overview

The questions in the LFS that have not been included in the core QLFS questionnaire are currently under review and may be included as an annual supplement, subject to stakeholder consultations.
Contents of the QLFS questionnaire
Section Number of questions Details of each section
Section 1 7 Biographical information (marital status, language, migration, education, training, literacy, etc.
Section 2 8 Economic activities
Section 3 19 Unemployment and economic inactivity
Section 4 25 Main work activities in the last week
All sections 59 Comprehensive coverage of all aspects of the labour market

Data Collection Notes

The Quarterly Labour Force Survey collects data on the labour market activities of individuals aged 15 years and above who live in South Africa.

Questionnaires

The questions in the LFS that have not been included in the core QLFS questionnaire are currently under review and may be included as an annual supplement, subject to stakeholder consultations.

Data Processing

Other Processing

Non-sampling errors include biases from inaccurate reporting, processing, and tabulation, etc., as well as errors from non-response and incomplete reporting. These types of errors cannot be measured readily. However, to the extent possible, non-sampling errors can be minimised through the procedures used for data collection, editing, quality control, and non-response adjustment.

Data Appraisal

Estimates of Sampling Error

The variances of the survey estimates are used to measure sampling errors. This measure is easier to interpret since it provides an indication of sampling error using the same scale as the estimate, whereas the variance is based on squared differences.
