Overview

ABSTRACT

The Labour Force Survey is a survey that collects data on the main characteristics of labour force, which are used to estimate the total labour force in our country. The main aim of the survey is estimating the labour force volume, i.e. employed and unemployed population, where employment relates to work in both formal and informal section. Additionally, LFS deals with characteristics of employment (professional status of the employed persons, their activity, occupation, rights realized at work...) and unemployment (acquired education, duration of job seeking, previous working experience...), as well as characteristics of inactive population - their education, age, income source and readiness for involvement in labour market. The survey was conducted in April and October 2011 on the territory of the Republic of Serbia. The period of observation for October anticipated the time from 24 - 30 October 2011.

Sampling

Sampling Procedure

Frame for sample selection for the first stage is the list of enumeration areas with 20 or more households and for the second stage the frame is made of the lists of households for the selected enumeration areas. The sample was reduced by 1% in relation to the basic set. Sample size. For 2011 survey the sample included 18616 households. The anticipated sample size is increased for 1432 households in relation to 2010. The sample was increased in order to reduce the effect of non-responsiveness, which is considerably influenced by the repeated interviewing of households. The number of enumeration areas selected for the sample remained unchanged, i.e. 2148. In enumeration areas that are the first time selected for the sample in 2011 we selected 10 households in each, and in the repeated enumeration areas we selected 8 households in each. The sample size for biannual surveys equalled 1074 enumeration areas, i.e. 9308 households.

Weighting

The basic weight resulting from the applied sampling design was corrected to allow for non-response.

Questionnaires

Overview

Data source for the Survey are statements of persons responding to interviewers, while the sources for administrative data are the records that the personnel departments of reporting units keep pursuant to the Act on labour records.

Data Collection Notes

Method of collection is different: in the Labour Force Survey the data are collected from the persons, i.e. members of the households selected for the sample, while the data from administrative sources are collected from the reports by enterprises, institutions, cooperatives or other organizations.

Questionnaires

Data source for the Survey are statements of persons responding to interviewers, while the sources for administrative data are the records that the personnel departments of reporting units keep pursuant to the Act on labour records.

Data Processing

Other Processing

In coding and processing the data collected by this survey, the following classifications were used:

1. Classification of activities, which is comparable to the UN classification of activities, ISIC - rev. 4 and the EU classification NACE, rev. 2;
2. Classification of occupations, which is comparable to the International standard classification of occupations, ISCO - 88;
3. List of schools, which is comparable to the international degrees of education and qualification, ICSED - 1997;
4. Classification of positions of employed persons, which is comparable to the international classification of employment positions, ICSE.

Data Appraisal

Estimates of Sampling Error

Sampling errors are published for the main population features only (tables A and B). Along with coefficient of variation (CV), as relative measures of estimation reliability (%), provided are also 95% intervals of confidence for the parameters.
