Overview

ABSTRACT

The Labour Force Survey is a survey that collects data on the main characteristics of labour force, which are used to estimate the total labour force in our country. The main aim of the survey is estimating the labour force volume, i.e. employed and unemployed population, where employment relates to work in both formal and informal section. Additionally, LFS deals with characteristics of employment (professional status of the employed persons, their activity, occupation, rights realized at work...) and unemployment (acquired education, duration of job seeking, previous working experience...), as well as characteristics of inactive population - their education, age, income source and readiness for involvement in labour market. In 2008 the LFS was conducted twice: in October and in April. In April, the period of observation was from 7 - 13 April 2008.

Sampling

Sampling Procedure

Frame for sample selection for the first stage is the list of enumeration districts with 20 or more households and for the second stage the frame is made of the lists of households for the selected enumeration districts. The sample was reduced by 1% in relation to the basic set.

Sample size. For 2008 survey the sample included 17184 households. 2184 enumeration districts were selected for the sample, and 8 households from each enumeration district. The sample size for semiannual survey anticipated 1074 enumeration districts, i.e. 8592 households. The sample size was determined in accordance with the expected precision of assessments, funds available and the rate of nonresponsiveness that is expected to be about 25%. Sample selection. The first stage units (enumeration districts) are selected systematically with probability in proportion to the number of population aged 15 and over, according to 2002 Census. Within each stratum enumeration districts are sorted according to municipality they belong to and ordinal number in municipality. This systematic selection provides for high level of implicit geographic stratification and ensures effective sample distribution. The second stage units (households) are selected with equal probability (simple random selection).

Deviations from Sample Design

The sample is designed so that the survey can be implemented several times in a year (semiannually, quarterly or all year round).

Weighting

The basic weight resulting from the applied sampling design was corrected to allow for non-response.

Questionnaires

Overview

The period of observation of activity for the Survey is the week preceding the interview, while the respective period for administrative data collection is the last day of the respective month; In 2008 the revised the questionnaire and the methodological guidelines for the LFS in accordance with the latest recommendations by Eurostat, due to the requirements to conduct Labor Force Survey twice (in April and October) in 2008.

Data Collection Notes

The method of collection is different: in the Labor Force Survey the data are collected from the persons, i.e. members of the households selected for sample, while the data from administrative sources are collected from the reports by enterprises, institutions, cooperatives or other organizations;

Questionnaires

The period of observation of activity for the Survey is the week preceding the interview, while the respective period for administrative data collection is the last day of the respective month; In 2008 the revised the questionnaire and the methodological guidelines for the LFS in accordance with the latest recommendations by Eurostat, due to the requirements to conduct Labor Force Survey twice (in April and October) in 2008.

Data Processing

Other Processing

In coding and processing the data collected by this survey, the following classifications were used:

1. Classification of activities, which is comparable to the UN classification of activities, ISIC - rev. 3 and the EU classification, NACE, rev. 1;
2. Classification of occupations, which is comparable to the International standard classification of occupations, ISCO - 88;
3. List of schools, which is comparable to the international degrees of education and qualification, ICSED - 1997;
4. Classification of positions of employed persons, which is comparable to the international classification of employment positions, ICSE.

Data Appraisal

Estimates of Sampling Error

Sampling errors were published for the main population features only (tables A and B). Along with coefficient of variation (CV) as relative measures of assessment of trustworthiness, expressed in percentage, provided were also 95% intervals of confidence for the parameters.
