### VERSION DESCRIPTION

Version 01

## Overview

---

### ABSTRACT

The LFS is a twice-yearly rotating panel household survey, specifically designed to measure the dynamics of employment and unemployment in South Africa. It measures a variety of issues related to the labour market, including unemployment rates (official and expanded), according to standard definitions of the International Labour Organisation (ILO). All editions of the LFS have been updated (some more than once) since their release. These version changes are detailed in a document available from DataFirst (in the "external documents" section titled "LFS 2000-2008 Collated Version Notes on the South African LFS").

### KIND OF DATA

Sample survey data [ssd]

### UNITS OF ANALYSIS

- Individuals
- Households

## Scope

---

### NOTES

The scope of this study includes:

- Demographics
- Education
- Economic activity
- Work for pay
- Business ownership
- Unemployment, employers
- Main work activity in the past week
- Wages
- Salary
- Employment

### TOPICS

Topic	Vocabulary	URI
Economic Policy	ILO	
Education	ILO	
Migration & Remittances	ILO	
Wages	ILO	
Household Income	ILO	
Employment	ILO	
Unemployment	ILO	
Informal Work	ILO	
Other Work Activities	ILO	
Gender	ILO	

## Coverage

---

### GEOGRAPHIC COVERAGE

National coverage

### GEOGRAPHIC UNIT

Province (variable name: "Prov")

District Council/metro (variable name: "DC")

### UNIVERSE

The LFS sample covers the non-institutional population except for workers' hostels. However, persons living in private dwelling units within institutions are also enumerated. For example, within a school compound, one would enumerate the schoolmaster's house and teachers' accommodation because these are private dwellings. Students living in a dormitory on the school compound would, however, be excluded.

# Sampling

## Sampling Procedure

---

Statistics South Africa uses a rotating panel methodology for the labour force survey. The rotating panel methodology involves visiting the same dwelling units on a number of occasions (in this instance, five at most). After the panel is established, a proportion of the dwelling units is replaced each round (in this instance, 20%). New dwelling units are added to the sample to replace those that are taken out.

Enumeration Areas (EAs) that had a household count of less than twenty-five were omitted from the census 2001 frame that was used to draw the sample of Primary Sampling Units (PSUs) for the new Master Sample. Other omissions from the Master Sample frame included all institution EAs except workers, hostels, convents and monasteries. EAs from census 2001 were pooled in two stages, before and after sampling. Before sampling the criterion that was used to pool EAs was that they should contain a minimum of one hundred households. However, during listing it was discovered that there were discrepancies between the information on the database and what was on the ground.

Therefore, in the second stage of pooling, EAs that were found to have less than sixty dwelling units during listing were pooled. The Master Sample is a multi-stage stratified sample. The overall sample size of PSUs was 3000. The explicit strata were the 53 district councils/metros (DCs). The 3000 PSUs were allocated to these DCs using the power allocation method. The PSUs were then sampled using probability proportional to size principles. The measure of size used was the number of households in a PSU as calculated in the census. The sampled PSUs were listed with the dwelling unit as the listing unit. From these listings systematic samples of dwelling units per PSU were drawn. These samples of dwelling units form clusters. The size of the clusters differs depending on the specific survey requirements. The LFS uses one of the clusters that contain ten dwelling units.

## Deviations from Sample Design

---

This is a two-stage complex sample of dwelling units as follows:

### 4.1 Primary sampling unit (PSU)

- Census 2001 Enumeration Areas (EAs) were pooled to form Primary Sampling Units (PSUs). A maximum of four (4) EAs were pooled to form a PSU, due to logistical reasons.
- 3000 PSUs were drawn using PPS (probability proportional to size) sampling. Census 2001 household count per EA is used as measure of size.

### 4.2 Dwelling unit (DU)

- The sampled PSUs were listed with the dwelling unit as the listing unit. From these listings systematic samples of ten (10) dwelling units per PSU were drawn.

### 4.3 Households

- All households at a selected dwelling unit were enumerated.

### 4.4 Person

- All household members were enumerated.

## Response Rate

---

The response rate of the LFS-september 2006 is 94.9%.

## Weighting

---

The initial weights (household weights), based on the sample design, were equal to the inverse of the probability of selection. The initial weight for each member of the household was the same as the weight for the household itself. Further adjustment factors were then calculated within PSUs to account for non-response. To adjust for under-enumeration and to align survey estimates with independent population estimates, the weights were calibrated against Person benchmarks. A software package called CALMAR was used to perform this calibration. Using an iterative procedure, CALMAR adjusted the weights so

that Person estimates conformed as closely as possible to external Person benchmarks. Gender, race and age group parameters were used for the Person cross-classification of the population.

# Questionnaires

## Overview

---

Section Number Details of each section  
of questions

Flap 7 Demographic information (name, age, sex, population group.)// particulars of each person in the household

- section 1 19 Biographical information (marital status, language, migration, education, training, literacy, etc.
- Section 2 7 Activities related to work in the past seven days.
- Section 3 17 Unemployment and non-economic activities
- Section 4 35 Main work activities in the past seven days
- Section 5 8 Job creation and expanded public works programme activities in the past six months
- Section 6 5 Agricultural activities, uncompensated activities in the past 12 months

All sections 98 Comprehensive coverage of all aspects of the labour market

## Data Collection

### Data Collection Dates

Start	End	Cycle
2006	2006	N/A

### Time Periods

Start	End	Cycle
2006-09		A month

### Data Collection Mode

Face-to-face [f2f]

### Data Collection Notes

Details about the questions included in the LFS questionnaire administered by field-staff are presented below. As you can see in the section of the LFS questionnaire has six sections (excluding the Flap), each of which focuses on a particular area of relevance to labour market issues and associated concerns. In total, the questionnaire contains 98 questions.

### Questionnaires

Section Number Details of each section  
of questions

Flap 7 Demographic information (name, age, sex, population group.)/ particulars of each person in the household

- section 1 19 Biographical information (marital status, language, migration, education, training, literacy, etc.

All sections 98 Comprehensive coverage of all aspects of the labour market

## **Data Processing**

### **Other Processing**

---

Users may apply or process this data, provided Statistics South Africa (Stats SA) is acknowledged as the original source of the data; that it is specified that the application and/or analysis is the result of the user's independent processing of the data; and that neither the basic data nor any reprocessed version or application thereof may be sold or offered for sale in any form whatsoever without prior permission from Stats SA.

## Data Appraisal

### Estimates of Sampling Error

Most surveys are designed so that the key statistics can precisely be estimated from the sample and the sampling error from those estimates can be computed from the survey itself. This implies that the sample surveys are large enough that the estimates satisfy the requirements of large-sample statistical theory developed for sample surveys. Sampling error is generally reported internationally by estimating the standard error (SE), which is a method which measures the extent to which an estimate might have varied by chance as a result of a sample being used instead of the using the whole population. The estimation of standard errors for all variables and indicators are very time consuming, thus the latter is generally compiled and reported only for certain key indicators at a national level. As a result please note that small subgroups with small sample sizes may show larger variance, therefore small subgroups should not be compared over time as it would not provide reliable estimates.
