General information

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data; and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.

General Household Survey 2012

The General Household Survey (GHS) 2012 data are in two files. The files are flat, ASCII, fixed field files, with one line of given length per record. This format was chosen to make the data usable with as many statistical programs as possible, and thus accessible to as wide a range of people.

Users can also access, explore and download the microdata in various formats, i.e. SAS, SPSS, Stata, etc. Users can also access the metadata from StatsOnline at www.statssa.gov.za. Go to the 'Tools' option at the bottom of the screen and click on 'Datasets'.

Other important information for users is found in the:

- Questionnaire
- Code lists (occupation, industry and district council)
- Relevant publications
- Website (www.statssa.gov.za)

Data files

The files and the corresponding sections of the questionnaire are as follows:

Person: Data from Flap and Sections 1 and 2
House: Data from Sections 3 and 4

The files also contain some derived variables.

The information in each file contains the following:

- Nature of records in the file and population covered
- Description of variables

Description of variables

The description of the variables comprises the following information:

Descriptive name: This is a short English description plus the variable name in the original file used by Stats SA to construct the ASCII file.

Position of the variable: The position of the data within the record, recorded in the format (@xxx y). '@xxx' indicates that the data begin at position (i.e. column) xxx and 'y' indicates that it is y digits wide. Most of the data variables are numeric and few character variables. All data are right justified.

Source: This is either the question in the questionnaire or, for derived variables, the method of derivation. Derived variables are usually found towards the end of a file.

Valid range: The range of valid values for the variable. For continuous variables this reflects the upper and lower limits as found in the data.

Not applicable: The code for 'not applicable' is provided for each variable. These are now numeric.

Missing value: A code for 'missing/unspecified' values is given for each variable.

Notes: Specific observations to be noted by users.

Most questions in the GHS questionnaire are pre-coded, i.e. there are a set number of choices from which one or more must be selected. For open-ended 'write-in' questions, the description will state that post-coding occurred and explain how this was done. Most variables have been pre-coded from the questionnaire and are not repeated in the variable description. Where the coding is not apparent, the description either provides the codes or indicates where code lists are to be found.

Linking files

The data from different files can be linked on the basis of a record identifier. The record identifier is the first field/s in each file. Each record contains a number (UqNr), which constitutes a unique household identifier. All records with a given unique household identifier, no matter which file they are in, belong to the same household. For individuals, a further two digits constitute the Person number (PersonNr). When these are added to the unique household identifier, a unique individual identifier is created. Again, these can be used to link records from the 'Person' and 'House' files.

Methodology

Target population

The target population of the survey consists of all private households in all nine provinces of South Africa and residents in workers' hostels. The survey does not cover other collective living quarters such as students' hostels, old-age homes, hospitals, prisons and military barracks, and is therefore only representative of non-institutionalised and non-military persons or households in South Africa.

Sample design

The sample design for the GHS 2012 was based on a master sample (MS) that was originally designed for the Quarterly Labour Force Survey (QLFS) and was used for the first time for the GHS in 2008. This master sample is shared by the QLFS, GHS, Living Conditions Survey (LCS), Domestic Tourism Survey (DTS) and the Income and Expenditure Survey (IES).

The master sample used a two-stage, stratified design with probability-proportional-to-size (PPS) sampling of primary sampling units (PSUs) from within strata, and systematic sampling of dwelling units (DUs) from the sampled PSUs. A self-weighting design at provincial level was used and MS stratification was divided into two levels. Primary stratification was defined by metropolitan and non-metropolitan geographic area type. During secondary stratification, the Census 2001 data were summarised at PSU level. The following variables were used for secondary stratification; household size, education, occupancy status, gender, industry and income.

Census enumeration areas (EAs) as delineated for Census 2001 formed the basis of the PSUs. The following additional rules were used:

- Where possible, PSU sizes were kept between 100 and 500 DUs;
- EAs with fewer than 25 DUs were excluded;
- EAs with between 26 and 99 DUs were pooled to form larger PSUs and the criteria used was *same settlement type*;
- Virtual splits were applied to large PSUs: 500 to 999 split into two; 1 000 to 1 499 split into three; and 1 500 plus split into four PSUs; and
- Informal PSUs were segmented.

A randomised-probability-proportional-to-size (RPPS) systematic sample of PSUs was drawn in each stratum, with the measure of size being the number of households in the PSU. Altogether approximately 3 080 PSUs were selected. In each selected PSU a systematic sample of dwelling units was drawn. The number of DUs selected per PSU varies from PSU to PSU and depends on the Inverse Sampling Ratios (ISR) of each PSU.

Allocating sample sizes to strata¹

The randomised PPS systematic sampling method is described below. This procedure was applied independently within each design stratum.

Let N be the total number of PSUs in the stratum, and the number of PSUs to be selected from the stratum is denoted by n . Also, let x_i denote the size measure of the PSU i within the stratum, where $i = 1, 2, 3, \dots, N$. Then, the method for selecting the sample of n PSUs with the Randomised PPS systematic sampling method can be described as follows:

¹ Source: Sample Selection and Rotation for the Redesigned South African Labour Force Survey, by G. Hussain Choudhry, 2007.

Step 1: Randomise the PSUs within the stratum

The list of N PSUs within the stratum can be randomised by generating uniform random between 0 and 1, and then by sorting the N PSUs in ascending or descending order of these random numbers. Once the PSUs have been randomised, we can generate permanent sequence numbers for the PSUs.

Step 2: Define normalised measures of size for the PSUs

We denote by x_i the measure of size (MOS) of PSU i within the design stratum. Then, the measure of

size for the stratum is given by $X = \sum_{i=1}^N x_i$. We define the normalised size measure p_i of PSU i as $p_i = \frac{x_i}{X}$; $i = 1, 2, 3, \dots, N$, where N is the total number of PSUs in the design stratum. Then, p_i

is the relative size of the PSU i in the stratum, and $\sum_{i=1}^N p_i = 1$ for all strata. It should be noted that the value of $n \times p_i$, which is the selection probability of PSU i must be less than one.

Step 3: Obtain inverse sampling rates (ISRs)

Let R be the stratum inverse sampling rate (ISR). The stratum ISR is the same as the corresponding provincial ISR because of the proportional allocation within the province. It should also be noted that the proportional allocation within the province also results in a self-weighting design.

Then, the PSU inverse sampling rates (ISRs) are obtained as follows:

First, define N real numbers $Z_i = n \times p_i \times R$; $i = 1, 2, 3, \dots, N$. It is easy to verify that

$\sum_{i=1}^N Z_i = n \times R$. Next, round the N real numbers Z_i ; $i = 1, 2, 3, \dots, N$ to integer values R_i ; $i = 1, 2, 3, \dots, N$ such that each R_i is as close as possible to the corresponding Z_i value and the R_i values add up to $n \times R$ within the stratum. In other words, the sum of the absolute differences between the R_i and the corresponding Z_i values is minimised subject to the constraint that the R_i values add up to $n \times R$ within the stratum. Drew, Choudhry and Gray (1978) provide a simple algorithm to obtain the integer R_i values as follows:

Let " d " be the difference between the value $n \times R$ and the sum $S = \sum_{i=1}^N [Z_i]$, where $[\]$ is the integer function, then R_i values can be obtained by rounding up the " d " Z_i values with the largest fraction parts, and by rounding down the remaining $(N - d)$ of them. It should be noted that the integer sizes R_i ; $i = 1, 2, 3, \dots, N$ are also the PSU inverse sampling rates (ISRs) for systematic sampling of dwelling units.

Step 4: Obtain cumulative ISR values

We denote by C_j ; $j = 1, 2, 3, \dots, N$ the cumulative ISRs of the PSUs within the stratum. It should be noted that the PSUs within the stratum have been sorted according to the sequence numbers that were assigned after the randomisation. Then, the cumulative ISRs are defined as follows:

$$C_1 = R_1,$$

$$C_j = C_{(j-1)} + R_j; \quad j = 2, 3, \dots, N.$$

It should be noted that the value C_s will be equal to $n \times R$, which is also the total number of systematic samples of dwelling units that can be selected from the stratum.

Step 5: Generate an integer random number r between 1 and R , and compute n integers r_1, r_2, \dots, r_n as follows:

$$r_1 = r$$

$$r_2 = r_1 + R$$

$$r_3 = r_2 + R$$

.

.

$$r_i = r_{(i-1)} + R$$

.

.

$$r_n = r_{(n-1)} + R.$$

Step 6: Select n PSUs out of the N PSUs in the stratum with the labels (sequence numbers) number i_1, i_2, \dots, i_n such that:

$$C_{i_{i-1}} < r_1 \leq C_{i_i}$$

$$C_{i_{i-1}} < r_2 \leq C_{i_i}$$

.

.

$$C_{i_{i-1}} < r_n \leq C_{i_n}.$$

Then, the n PSUs with the labels i_1, i_2, \dots, i_n would get selected with probabilities proportional to size, and the selection probability of the PSU i will be given by R_i / R .

Weighting ²

The sampling weights for the data collected from the sampled households were constructed so that the responses could be properly expanded to represent the entire civilian population of South Africa. The design weights, which are the inverse sampling rate (ISR) for the province, are assigned to each of the households in a province. These were adjusted for four factors: Informal PSUs, Growth PSUs, Sample Stabilisation, and Non-responding Units.

Mid-year population estimates produced by the Demographic Analysis division were used for benchmarking. The final survey weights were constructed using regression estimation to calibrate to national level population estimates cross-classified by 5-year age groups, gender and race, and provincial population estimates by broad age groups. The 5-year age groups are: 0–4, 5–9, 10–14, 15–19, 20–24, 25–29, 30–34, 35–39, 40–44, 45–49, 50–54, 55–59, 60–64; and 65 and older. The provincial level age groups are 0–14, 15–34, 35–64; and 65 years and older. The calibrated weights were constructed in such away that all persons in a household would have the same final weight.

² Source: Sampling and Weighting System for the Redesigned South African Labour Force Survey, by G. Hussain Choudhry, 2007

The Statistics Canada software StatMx was used for constructing calibration weights. The population controls at national and provincial levels were used for the cells defined by cross-classification of Age by Gender by Race. Records for which the age, population group or sex had item non-response could not be weighted and were therefore excluded from the dataset. No imputation was done to retain these records.

Sampling and the interpretation of the data

Caution must be exercised when interpreting the results of the GHS at low levels of disaggregation. The sample and reporting are based on the provincial boundaries as defined in December/January 2006. These new boundaries resulted in minor changes to the boundaries of some provinces, especially Gauteng, North West, Mpumalanga/Limpopo, Eastern and Western Cape. In previous reports the sample was based on the provincial boundaries as defined in 2001, and there will therefore be slight comparative differences in terms of provincial boundary definitions.

Coverage

The target population is private households in all nine provinces of South Africa, and residents in workers' hostels. The survey does not cover other collective living quarters such as students' hostels, old-age homes, hospitals, prisons and military barracks.

Definitions of terms

Key word	Definition
Demographics	
Married	Having a husband or wife. This can include marriage according to traditional/customary law or a civil/religious marriage.
Living together as a married couple	Two persons who live together in the same household as a married couple, but who are not married to each other; a cohabiting couple.
Partner	One of two people living together as a married couple. Relationship of each to the other in a cohabiting couple.
Divorced	Marital status where a person's marriage has been legally dissolved and he/she has not remarried.
Separated	Situation where a married couple has parted without divorcing, thus allowing for reuniting if they wish at some time in the future. This is not a legal marital status under South African law, and is therefore self-defined.
Separated, legally	Situation where a married couple have entered a court or written agreement describing the terms under which they will live apart while remaining married. Legal separation is a possible step towards divorce, but also allows for the couple to reunite.
Widow	Woman whose husband has died and who has not married again. See marital status.
Widowed	Marital status of a person whose spouse has died and who has not married again.
Foster care	A system by which a certified adult act as stand-in 'parent' and temporarily cares for a minor child or a young person who has been removed from the custody of their birth parent(s) or other custodial adult by the state authority. This is different from adoption in that adoption is the permanent removal of the child, whilst foster care is usually not permanent.
Foster parent	A foster parent is an individual who has <i>foster care</i> of a child by order of a state authority.
Education	
Early childhood development (ECD)	Early childhood development (ECD) means the process of emotional, cognitive, sensory, spiritual, moral, physical, social and communication development of children from birth to school-going age. In South Africa this usually refers to the age group 0–4 years provided that the child does not become 5 before 30 June of that year.
Early childhood development services	Early childhood development services are services aimed at promoting early childhood development. It is provided by a person other than the child's parent or caregiver on a regular basis to children up to school-going age.
Educational institution	Any registered institution whose sole or main purpose is the provision of education, including pre-school, tertiary, adult education, etc.

Extra-mural activities	These activities are offered by many schools after school hours. This can include sport activities but also cultural activities such as chess, drama, computer studies, etc.
Diploma	A diploma is a certificate or deed issued by an educational institution to testify that the recipient has successfully completed a particular course of study. For the purpose of this questionnaire, all references to diplomas and certificates only refer to courses that lasted six months or longer. Any certificates or diplomas related to courses that lasted less than six months should not be included as responses to questions related to the highest level of education or attendance of education institutions.
Corporal punishment and physical violence	<p>Corporal punishment is the deliberate infliction of pain intended to punish a person or change his/her behaviour. Corporal punishment therefore involves the use of physical violence. The difference between corporal punishment and physical violence within school context is that:</p> <ol style="list-style-type: none"> 1) Corporal punishment is applied on the buttocks or hands with a cane or other instrument. Physical violence can be applied anywhere on the body. 2) The child has to know what kind of behaviour will lead to corporal punishment and the reason for punishment is clearly explained to the child before and after its application. Physical violence on the other hand is usually random, uncontrolled, and unpredictable and is usually administered in anger.
Health and general functioning	
Disability	A physical or mental handicap which has lasted for six months or more, or is expected to last at least six months, and which prevents the person from carrying out daily activities independently or from participating fully in educational, economic or social activities. Disability is a lack of ability relative to a personal or group standard. It includes mental disability, physical disability or impairment of the senses (hearing, seeing, walking, smelling, touching). The disability can be the result of a defect at birth, a chronic illness or an accident.
Depression and other mental illnesses	Depression means that someone is feeling depressed, sad, helpless, and hopeless. Other mental illnesses could include schizophrenia, bipolar disorder, neurosis, psychosis, etc.
Chronic illness	A chronic illness is permanent or lasts at least three months or longer.
Grants	
Grant	A grant is financial assistance provided by the government, a public fund or private institution to a person or organisation for a specific purpose. The money does not need to be paid back.
Old-age grant	Financial assistance provided by the government to elderly people who comply with the means test. Currently a grant of R1 200 is paid to men and women aged 60 to 74 years, while R1 220 is paid to men and women aged 75 years and above.
Pension	A pension is a steady income received by a person, usually after retirement, from a former employer, pension fund or other retirement provider.

Disability grant	<p>Government grant received by adults who are certified to have a mental or physical disability, which lasts six months or longer and renders them unfit to work.</p> <p>Age cut-offs are for men and women 18 to 59 years old. To qualify for this grant, a person must submit a medical or assessment report confirming disability. Note that even people with diseases such as AIDS, cancer, etc. who have been proven through a medical assessment as unable to work for a certain period, qualify for a disability grant.</p> <p>Value: R1 200 per month.</p>
Permanent disability grant	<p>A government grant received when the disability will continue for longer than a year.</p>
Temporary disability grant	<p>A government grant received when the disability will continue for a period of not less than six months, and not longer than twelve months.</p>
Child support grant	<p>Government grant received on behalf of a child of a specific age as determined by legislation, in underprivileged families. Currently given to children (0–17 years old) in underprivileged families. Value: R280 per month.</p>
Care dependency grant	<p>A monthly grant from government to parent/guardian/foster parent of a child with a disability and in need of full-time special care. Children aged 0–17 years qualify.</p> <p>Value: R1 200 per month.</p>
Foster care grant	<p>A foster child is a child who has been placed in the custody of foster parents as a result of being:</p> <ul style="list-style-type: none"> • orphaned • abandoned • at risk • abused • neglected <p>The grant is given to someone who cares for a child who is not their own by birth. To become a legal foster parent, one can apply at a Children's Court. The application is done through a social worker from the Department of Social Development or a Child Welfare Society. Grant payments stop when the child reaches 18 years. If the child continues to stay with the foster parent and is, for example, studying, the grant can be paid out until the age of 21 years.</p> <p>Value: R770 per month.</p>
Child	<p>A person under the age of 18 years.</p>
Grant in aid	<p>An additional grant awarded to persons who are in receipt of an old-age grant, disability grant or war veteran's grant, and who need full-time care from someone else. A grant in aid cannot stand alone.</p> <p>Value: R250 per month.</p>
Social relief	<p>Temporary and immediate provision of material assistance to a person who is in need. This could be as a result of losing his/her possessions through a natural disaster or for any other reason.</p>

War veteran's grant	A grant received by a person 60 years or older; who served the country in one of the officially listed wars, and is unable to maintain themselves due to physical/mental disability. Value: R1 220 per month. Beneficiaries who are disabled and cannot look after themselves can also apply for a Grant in aid.
General household information	
Dwelling unit	A dwelling unit is any structure or part of a structure or group of structures occupied, or intended for occupation by one household. Examples of each are a house, a flat, and a group of dwellings. (An arrangement where a group of structures, huts or rondavels make up a dwelling unit is common in some rural areas.) A structure which is vacant and/or under construction, but which can be lived in at the time of the survey, counts as a dwelling unit. In Section 3 of the questionnaire there are some questions related to the dwelling. Please note that these questions refer to the structure occupied by the household.
Formal dwelling	A structure built according to approved plans, i.e. house on a separate stand, flat or apartment, townhouse, room in backyard, rooms or flatlet elsewhere.
Informal dwelling	A makeshift structure not erected according to approved architectural plans, for example shacks or shanties in informal settlements, serviced stands or proclaimed townships. They can also be in the backyards of other dwelling types. Informal dwellings are also referred to as a shack or shanty.
Traditional dwelling	A dwelling made of clay, mud, reeds or other locally available materials. This is a general term that includes huts, rondavels, etc. Such dwellings can be found as single units or in clusters. Rondavels constructed with concrete blocks or stone walls should not be considered traditional.
Cluster house	A cluster house is a freestanding property with no dwelling walls shared. They are in a complex with a common boundary wall, may or may not have security, and may or may not be on shared property.
Townhouse	Townhouses share a dwelling wall with at least one neighbour. They are in a complex (with or without security). There are usually several similarly looking units within the same enclosed terrain with 2 to 6 units sharing a common roof. There is some communal property (e.g. parking, garden, pool, etc.). A townhouse might be one storey (simplex), or more (duplex). Townhouses might also have separate dwelling units on top of each other (stacked units). Dwellings in a townhouse block usually have their own entrances and do not share a common entrance or foyer to their dwellings as is the case with an apartment.
Semi-detached house	Semi-detached houses share a dwelling wall with at least one of its neighbours. Semi-detached houses are not in a (security) complex. Semi-detached houses do not have communal property (such as parking, pool, etc.). Typically, semi-detached houses are found in older suburbs, having been built before the 1970s.
Market value	The market value represents the value that the house could possibly fetch if it was sold. This is partly based on what other houses in the same neighbourhood that look similar have been sold for or advertised for recently.

Municipal value	The municipality gives a value to properties which is used to calculate the property tax that the house owner needs to pay.
Apartment building or block of flats	A structure, usually multi-storey, consisting of a number of dwellings sharing the same residential address and usually sharing a common entrance, foyer or staircase.
Apartment or flat	An apartment building is made up of several apartments or flats. There are usually several on each floor and they share at least one wall with an adjoining unit. It is usually not situated in a complex.
Wattle and daub	This is a traditional construction method that is used in rural areas. The house wall consists of wooden sticks or poles that are covered with mud or a mixture of mud and clay.
RDP	The Reconstruction and Development Programme (RDP) was designed to improve the standard of living for the majority of the population by providing low-cost housing, basic services, education, and health care. After the RDP department was disbanded, the primary responsibility for its execution was shifted to each of the sectoral departments dealing with its subcomponents. In the case of housing, the Department of Housing became the only governmental institution responsible for addressing the housing-related outcomes of the RDP. All low-income housing that was constructed since 1994 by the government was referred to as RDP houses. In 2004 the Minister of Housing presented a comprehensive new plan for the development of sustainable human settlements called the 'Breaking New Ground' or 'BNG' plan. This plan included the provision of housing to low-income households (previously known as the RDP house), as well as the expansion and simplification of housing subsidy provision and increased involvement of the private sector in financing housing amongst other things. New houses that were constructed after 2004 were done within the framework of the BNG policy and are technically no longer referred to as RDP houses, but low-income houses instead.
RDP house	A house that was constructed for low-income households through the Reconstruction and Development Programme.
Mains	The general purpose alternating current (AC) electrical power supply. The term 'mains' usually refers to the general purpose AC electrical power supply which is supplied in South Africa by Eskom or a municipality. It does not include connections to a generator or solar panels and other alternative energy sources.
Indigent household	A household that qualifies to receive some or all basic services for free because they have no income or a low income. These households must have been identified by the municipality and appear on the indigent register, in line with the municipal indigent policy. Under certain circumstances housing the elderly, disabled people and persons in poor health is also classified as indigent and exempted from making a contribution towards contractor constructed housing.
Free basic services	A minimum amount of free services that households receive from the municipality or other entity. It can include water, refuse removal, sanitation and/or electricity.

Free basic water	An amount of water determined by government that should be provided free to households with no or low incomes to meet basic needs, currently set at 6kℓ per month per household within 200 metres from each dwelling.
Free basic electricity	An amount of electricity determined by government that should be provided free to households with no or low incomes to meet basic needs, currently set at 50 kWh per month per household.
Remittances	Remittances refer to money sent to the household or given to the household by someone who lives outside the household according to our definition.
Agriculture	
Pesticide	A pesticide is a substance/mixture of substances used to kill pests. Pests can include insects, plant pathogens, molluscs, birds, mammals, fish, nematodes and microbes that compete for food with humans, damage property or transfer diseases.
Herbicide/ weedkiller	A herbicide/weedkiller is a substance/mixture of substances used to kill plants that are not wanted in a specific area.
Industrial crop	An industrial crop is non-food crops and includes fibre crops such as cotton, flax, linen, etc.; tobacco; oilseeds such as sunflowers, and beverages such as tea and coffee.
Sharecropping	Sharecropping is a land use system whereby someone cultivates the land of a landowner; do not pay rent, but gives part of the harvest to the landowner in payment for the use of the land.
Hectare	Metric unit of land measurement equivalent to 10 000 square metres.
Grains	Harvested produce of cereals, pulses, oil crops and legumes.
Irrigation	Irrigation takes place when water is artificially applied to the soil by people. This can be done manually (buckets, watering cans, etc.) or by using equipment such as irrigation systems or sprinklers to assist with the growing of crops.
Livestock	All animals or birds kept or reared mainly for agricultural purposes, including cattle, sheep, goats, pigs, horses, poultry, rabbits, etc.
Oil crop	Annual plant of which the seeds or fruit are used mainly for extraction of culinary and industrial oils.
Extension Officer	Person trained in agriculture and employed by the Department of Agriculture or any other body responsible for rendering assistance to farmers to promote good farming practices.

Gender (Gender)

(@34 1.)

C	<p>Is a male or a female?</p> <p>1 = Male</p> <p>2 = Female</p>
----------	--

Note to users

This question is asked for each household member to determine his or her gender. This question, and all consequent questions, are applicable only if there is a 'Yes' answer in the previous question, which determines whether a person is a household member or not. The survey officers are instructed not to assume the gender of the members of the households by just looking at people's names or physical appearances.

Universe

Every person who has stayed in the household in the selected dwelling unit at least four nights per week in the four weeks prior the interview.

----------	--

Note to users

This question is asked to find out the ages and dates of birth of the household members. Concerning the date of birth, the survey officers were requested to confirm the date from documentation if the respondent did not know the date of birth. The question starts with *Day of birth*, then the *Month of birth* and finally the *Age in years*. For *Month of birth* the equivalent is given in numbers, i.e. January is represented with 01, February with 02 and so forth. The *Year of birth* is given as a four-digit number, e.g. 1933 or 1996.

The instruction for *Age in years* is to write the years in whole numbers and not in words. Moreover, these years must be complete years; thus if a person is two years and six months, the instruction is to write the two completed years. For those children who are less than a year, the instruction is to write 00.

----------	---

Note to users

This question is asked to determine the population group of household members from the selected dwelling. The respondent must answer for each member without any assumptions. In this instance survey officers are also instructed not to make any conclusions which may be influenced by their observation or using people's names during the interview. This question may be very sensitive to some respondents, especially in this post-apartheid era, but it is really important to find out what the composition of the South African population is.

--------------	---

Note to users

This question is about the marital status of the members of the household. Both civil and traditional marriages are considered in this question. Options 6 and 7 are similar in that they both refer to individuals who are single. However, the two distinguish between individuals who may have lived together with someone as husband/wife before.

If the response is 'widowed', 'divorced' or 'separated, but still legally married', or 'single, but have been living together with someone as husband/wife before' and 'single and have never been married/never lived together as husband/wife before', the survey officer is instructed to go to Q1.3a.

--------------	--

Note to users

The current status of the pregnancy is being established in this question. Note that options 4 and 5 are similar in that the pregnancy ended before the child was born. However, they differ in respect of the time when the child died. In option 4 the child died as a result of a miscarriage or spontaneous abortion, thus the mother had no choice. Option 5 refers to a situation where the mother chose to end the pregnancy through an intervention by herself or a medical practitioner (abortion/termination of pregnancy).

	11 = Well	
	12 = Spring	
	13 = Other (specify)	<input style="width: 40px; height: 20px;" type="text"/>

Note to users

This question seeks to determine the main source of water for households. It is through questions of this nature where it would be indicated whether the majority of households receive water inside their dwellings, on their sites or at communal areas. It should be noted that if the people obtain water from two sources, they should name the source that they use for drinking and cooking. The neighbour's tap in Option 5 should be someone/a household that is very close to the respondent's dwelling unit(s)/structure(s). The instruction to the enumerators is that, when Options 1 to 4 are selected, they must skip to Question 3.14.
