Overview

ABSTRACT

The Quarterly Labour Force Survey (QLFS) is a household-based sample survey conducted by Statistics South Africa (StatsSA). It collects data on the labour market activities of individuals aged 15 years or older who live in South Africa. Since 2008, StatsSA have produced an annual dataset based on the QLFS data, "Labour Market Dynamics in South Africa". The dataset is constructed using data from all all four QLFS datasets in the year. The dataset also includes a number of variables (including income) that are not available in any of the QLFS datasets from 2010. This report is the seventh annual report produced by Stats SA on the labour market in South Africa. The report includes, for the third time, an analysis of labour market dynamics. The objective of this report is to analyse the patterns and trends of annual labour market results over the period 2008 to 2014.

GEOGRAPHIC COVERAGE

The survey had national coverage. The lowest level of geographic aggregation for the data is Province

UNIVERSE

The QLFS sample covers the non-institutional population except for those in workers' hostels. However, persons living in private dwelling units within institutions are enumerated. For example, within a school compound, one would enumerate the schoolmaster's house and teachers' accommodation because these are private dwellings. Students living in a dormitory on the school compound would, however, be excluded.

Sampling

Sampling Procedure

The QLFS frame has been developed as a general purpose household survey frame that can be used by all other household surveys irrespective of the sample size requirement of the survey. The sample size for the QLFS is roughly 30 000 dwellings per quarter.

The sample is based on information collected during the 2001 Population Census conducted by Stats SA. In preparation for the 2001 Census, the country was divided into 80 787 enumeration areas (EAs). Stats SA's household-based surveys use a Master Sample of Primary Sampling Units (PSUs) which comprises of EAs that are drawn from across the country.

The sample is designed to be representative at the provincial level and within provinces at the metro/non-metro level. Within the metros, the sample is further distributed by geography type. The four geography types are: urban formal, urban informal, farms and tribal. This implies, for example, that within a metropolitan area the sample is representative at the different geography types that may exist within that metro.

The current sample size is 3 080 PSUs. It is divided equally into four sub-groups or panels called rotation groups. The rotation groups are designed in such a way that each of these groups has the same distribution pattern as that which is observed in the whole sample. They are numbered from one to four and these numbers also correspond to the quarters of the year in which the sample will be rotated for the particular group.

The sample for the QLFS is based on a stratified two-stage design with probability proportional to size (PPS) sampling of primary sampling units (PSUs) in the first stage, and sampling of dwelling units (DUs) with systematic sampling in the second stage.

Deviations from Sample Design

Each quarter, a $\frac{1}{4}$ of the sampled dwellings rotate out of the sample and are replaced by new dwellings from the same PSU or the next PSU on the list. Thus, sampled dwellings will remain in the sample for four consecutive quarters. It should be noted that the sampling unit is the dwelling, and the unit of observation is the household. Therefore, if a household moves out of a dwelling after being in the sample for, say two quarters, and a new household moves in, the new household will be enumerated for the next two quarters. If no household moves into the sampled dwelling, the dwelling will be classified as vacant (unoccupied).

The design of the QLFS enables the tracking of individuals across quarters. This means that, in principle, as many as three out of every four (75%) individuals in the sample can be tracked between two consecutive quarters. The results analysed in this chapter use data on matched individuals that were present in the sample between two consecutive quarters using the following variables: name, surname, gender, age, and population group.

Response Rate

In general, imputation is used for item non-response (i.e. blanks within the questionnaire) and edits failure (i.e. invalid or inconsistent responses). The eligible households in the sampled dwellings can be divided into two response categories: respondents and non-respondents. Weight adjustment is applied to account for the non-respondent households (e.g. refusal, no contact, etc.).

Average response rate by province, 2014
Province Percentages (%)

Western Cape 90,9
Eastern Cape 95,8
Northern Cape 90,2
Free State 96,5
KwaZulu-Natal 95,5
North West 92,7
Gauteng 80,1
Mpumalanga 93,4

Limpopo 99,2
South Africa 91,9

Weighting

The sampling weights for the data collected from the sampled households are constructed in such a manner that the responses could be properly expanded to represent the entire civilian population of South Africa. The weights are the result of calculations involving several factors, including original selection probabilities, adjustment for non-response, and benchmarking to known population estimates from the Demography division of Stats SA. The final survey weights are constructed using regression estimation to calibrate to the known population counts at the national level population estimates (which are supplied by the Demography division) cross-classified by 5-year age groups, gender and race, and provincial population estimates by broad age groups. The 5-year age groups are: 0-4, 5-9, 10-14, etc., and 65 years and over. The provincial-level age groups are: 0-14, 15-34, 35-64, and 65 years and over. The calibrated weights are constructed in such a way that all persons in a household would have the same final weight.

Questionnaires

Overview

The questionnaire of the Labour Force Survey 2014 is used for the interviews of labour Market Dynamic. The final survey weights are used to obtain the estimates for various domains of interest, e.g. number of persons employed in agriculture in Western Cape, number of females employed in manufacturing, etc.

Data Collection Notes

Panel data are collected at different time periods for the same individuals or households. For example, collecting information about whether a person is employed or not for the same person on a quarterly basis over a number of years constitutes a panel.
