Fiji Employment/Unemployment Survey 2010-11

Study Type

Labor Force Survey [hh/lfs]

Series Information

The EUS 2010-11 survey was conducted from April 2010 to March 2011. Altogether, this was conducted through 6 subrounds with 6 Lots within each subround.

The survey was undertaken to capture the labor force characteristics of the country in terms of unemployment and employment rate, economically active and inactive and so forth.

Overview

Abstract

The 2010-11 Employment and Unemployment Survey (EUS) will be the fourth household survey to be undertaken by the Household Survey Unit of the Fiji Bureau of Statistics. Previous surveys were the HIES 2002-03, EUS2004-05 and the 2007 Population Census. It is a nationwide sample survey spread out in rounds throughout the year to capture the seasonal effects on the economic activity of the people of Fiji.

Purpose of the EUS

The principal objective of the survey is to obtain comprehensive statistical data on the labour force or the economically active population, which comprise the employed and unemployed. The survey will also gather information on the economically inactive population. From the data, the size and structure of the country's workforce will be determined and used to assess changes in labour supply and demand by comparing with figures obtained in earlier census and surveys.

The details will give us an insight into how available human resources are utilised in the different sectors of the economy. Such information is essential for planning and formulating policies on the development of human resources.

Data such as educational attainment, training level and field, availability for work etc. are important in the design and evaluation of overall government policies aimed at promoting and creating employment. These include training programmes, schemes to help people start or return to work, assistance in setting up an enterprise and other incentives for employment promotion.

Need to find out the evolution of employment in the different economic sectors of the economy.

We need to have the survey conducted regularly in order to monitor current trends for instance we need to find out where the net annual increases in the labour force are being absorbed.

Employment and unemployment data is very important for socio-economic development in the country. The availability of such information will allow government to better address the development and utilisation of the country's human resource stock.

Results and findings of the EUS will provide Government with recent and more detailed data on the present employment and unemployment situation. A lot of changes have occurred since the 2004-05 EUS, the 2007 Census provides indicative labour force numbers which are limited in detail, and the annual employment surveys relate only to those in formal wage and salary employment. At the same time, concern over the employment situation is increasing. Even without detailed

knowledge it can be observed that the growth in the number of rewarding job opportunities is not keeping pace with the rate of increase of the labour force.

Key Objectives

- 1) Economic activity that people are engaged in to earn their living.
- 2) To gather information on the country's Human Resources. Number available and number required. Those that are discontent. Structure of working population (occupation and industry)
- 3) To provide details on the trends in the labour force or economically activity persons in the country.
- 4) Skill shortage, skill levels,
- 5) Secondary Activity
- 6) Unemployment
- 7) Inactive Population

INFORMATION TO BE GATHERED

The EUS is an in-depth survey which gathers detailed labour force information such as, employment, unemployment, underemployment, work skills, employment initiatives of the unemployed etc.

Such information is required if we are to better understand the true size and nature of the country's labour force. The following information is gathered in the EUS:

- i) Labour Force Number, Distribution, Characteristics and Capabilities;
- ii) Labour Supply and Demand with employment, unemployment and underemployment details;
- iii) Time Use;
- iv) Problems Encountered;
- v) Internal Migration and Reasons; and
- vi) Formal and Informal Sector employment.
- vii) Types of economic activity people are engaged in to earn a living such as the Occupation and Industry details of the working population.
- viii) Patterns of employment and underemployment
- ix) Patterns and characteristics of unemployment
- x) Geographical distribution of working people
- xi) Ethnic differences of employment and unemployment
- xii) Employment in association with disabilities
- xiii) Employment and Unemployment in association with levels of education
- xiv) General conditions of work
- xv) Internal migration and reasons

Questionnaire Structure

1. Schedule 1 - Listing

2. Schedule 2 - Block 1 Demographic Particulars, Education and Economic Status
3. Schedule 2 - Block 2 For all economically active persons at any time during the last 12 months
4. Schedule 2 - Block 3 For all economically active persons in the last 7 days
5. Schedule 2 - Block 4 For all unemployed during the last 7 days
6. Schedule 2 - Block 5 Internal Migration
7. Schedule 2 - Block 6 Child Labour Particulars
8. Schedule 2 - Block 7 Own-Account Income and Expenses Particulars
9. Schedule 2 - Block 8 Housing Particulars

Kind of Data

Sample survey data [ssd]

Units of Analysis

The units of analysis for the EUS 2010-11 are:

- individual (person)
- household

This will also be based on the 7 stratum of sample selection:

- Central/Eastern Urban
- Central Rural
- Eastern Rural
- Northern Urban
- Northern Rural
- Western Urban
- Western Rural

Scope

Notes

The scope of the EUS 2010-11 Survey includes:

Person record: demographic characteristics like age, marital status, employment status, economic activity for 12 months and 7-day period, child labor

Household record: household characteristics

Coverage

Geographic Coverage

The nation wide 2010-11 EUS will provide estimates at the following levels:

- National
- Administrative Division
- Central
- Eastern
- Northern
- Western
- Urban / Rural

Universe

The survey covered all usual residents in private households. Institutions dwellings are not included.

Sampling

Sampling Procedure

A representative sample size of 4000 households is being targeted with the households to be selected from 400 out of the 1,602 Enumeration Areas covering the whole country. A sample size of 4000 households will provide the required level of data reliability.

A commonly used two-stage sampling strategy was adopted in order to draw a representative sample of households. In the first stage a representative sample of 200 Urban and 200 Rural EAs were selected. This was followed by the listing stage, which updated population and household numbers in the selected EAs. The household list was re-arranged before a sample of 10 households was selected.

Sample Selection

The sampling frame was the updated Urban and Rural EAs of the 2007 Population and Housing Census. The EAs were divided into the Central, Eastern, Northern and Western divisions. Within these administrative divisions there were further divisions into urban and rural areas.

Altogether there are 7 strata in the sample:

- Central/Eastern Urban (these two were combined due to the small number of urban area in the Eastern Division)
- Central Rural
- Eastern Rural
- Northern Urban
- Northern Rural
- Western Urban
- Western Rural

The sample of 4000 households will be selected from a sample of 400 EAs. The 400 EAs were selected from a list stratified into the four administrative regions and within these regions by socio-economic class. So eventually the 4000 households were divided into 4 with data collection from each of the 4 samples spread over three months or a sub-round. Therefore with 4 sub-rounds we were able to spread the data collection over a one-year period so that seasonal changes to employment could be captured.

Independent samples for each sub-round were selected and this was divided into lots within a sub-round. (Replacement households estimate - 100% response rates after replacement)

Sample Strategy

- Stage 1: Select a sample of EAs
- Stage 2: Select a cluster of households from each selected EA

Stage 1 - Select EAs

- The list of EAs within each stratum was sorted by size, where the size measure was the number of households within the EA
- Probability Proportional to Size (PPS) sampling was then adopted to select a sample of EAs

Two Stage Sampling

Stage 2 - Select Households

- Within each selected EA, an updated list of households will be produced
- From this updated list, a fixed cluster of 10 households will be selected using systematic sampling
- In summary, the 2010-11 EUS can be considered a stratified two stage design with PPS sampling being used to select EAs at the first stage and systematic sampling being used to select a fixed cluster of dwellings at the second stage

Weighting

Estimation Procedure

Concept of a weight

- If only a sample of units are being used to estimate the characteristics for a population, then those units must represent more than only themselves
- The factor that determines how many units in the population a sampled unit represents, is known as the weight
- This weight can differ for different units in the sample
- The weight for a two stage sample unit can be viewed as the inverse of the probability of selection for that unit

The probability of selection of a unit is:

$$\text{Probability of selection at 1st stage} \\ \times \text{Probability of selection at 2nd stage}$$

Based on the sampling design and the stratified two stage systematic sampling procedure, the weights were calculated as follows. Let

- N_i = Total number of Households in i th stratum in EUS Frame 2004
- N_{ij} = Total number of Households in i th stratum/ j th EA in EUS Frame 2004
- H_{ij} = Total number of Households in i th stratum/ j th EA during listing
- h_{ij} = Actual number of households surveyed in i th stratum/ j th EA
- n_{ij} = Number of EAs selected in i th stratum

The probability of selection of the j th EA in the i th stratum is given by:

$$\frac{N_{ij} \times n_i}{N_i} \dots\dots\dots(1)$$

The probability for any household to be selected is given by:

$$\frac{h_{ij}}{H_{ij}} \dots\dots\dots(2)$$

Then the probability of selection of any household is obtained by multiplying (1) and (2):

$$\frac{N_{ij} \times n_i \times h_{ij}}{N_i \times H_{ij}} \dots\dots\dots(3)$$

The 'weight' is then given by the inverse of (3)

$$\text{i.e. } \frac{N_i \times H_{ij}}{N_{ij} \times n_i \times h_{ij}}$$

Or

$$\frac{(\text{No of Hhlds in } i \text{ th Stratum } j \text{ th EA - Frame}) \times (\text{No. of Hhlds in EA @ Listing})}{(\text{No of Hhlds in EA - Frame}) \times (\text{No. of Hhlds Surveyed}) \times (\text{No.of EAs in Stratum})}$$

Thus the Total Population Estimate becomes

$$Y = \sum W_{ij} (y)$$

where W_{ij} = weight at i th stratum/ j th EA for population (y)

Example

- Two stage process involves the selection of EA's (1st stage), followed by the selection of households (2nd stage)
- Prob of EA being selected = 1/4

- Prob of household being selected if the EA was selected = $1/8$

Therefore

- Prob of household being selected = $1/4 * 1/8 = 1/32$

- Weight for that unit = 32
