**Labour Force Survey  
March 2004**

The Labour Force Survey 2004:1 data is in three files. The files are flat, ASCII, fixed field files, with one line of given length per record. This format was chosen so as to make the data usable with as many statistical programs as possible, and thus accessible to as wide a range of people as possible.

Other important information for users is found in the:

Questionnaire

Additional code lists (occupation, industry)

Relevant publications

Web-site (<http://www.statssa.gov.za/>)

## **THE DATA FILES**

The files and the corresponding sections of the questionnaire are as follows:

**PERSON:** Data from Flap and Section 1

**WORKER:** Data from Flap and Section 1, Section 2, 3, 4, 5

**HOUSE:** Data from section 6

**STRATUM\_PSU:** Stratum and PSU numbers

The files also contain some derived variables.

The information in each file contains the following:

- Nature of records in the file and population covered
- Description of variables

### **Description of variables**

The description of the variables comprises the following information:

**Descriptive name:** This is a short English description plus the variable name in the original file used by Stats SA to construct the ASCII file.

**Position of the variable:** The position of the data within the record, recorded in the format (@xxx y.). “@xxx” indicates that the data begins at position (i.e. column) xxx and “y.” indicates that it is y digits wide. All data is numeric. All data is right-justified.

**Source:** This is either the question in the questionnaire or, for derived variables, the method of derivation. Derived variables are usually found towards the end of a record.

**Valid range:** The range of valid values for the variable. For continuous variables this reflects the upper and lower limits as found in the data.

**Not applicable:** The code for not applicable is provided for each variable. These are now numeric.

**Missing value:** A code for “missing”/unspecified values is given for each variable.

**Notes:** Specific observations to be noted by users.

Most questions in the Labour Force Survey questionnaire are pre-coded, i.e. there is a set number of choices from which one or more must be selected. For open-ended ‘write-in’ questions, the description will note that post-coding occurred and explain how this was done. For most variables the coding is apparent from the questionnaire (available elsewhere in the documentation) and is not repeated in the variable description. Where the coding is not apparent, the description either provides the codes or indicates where code lists are to be found.

### **Linking files**

The data from different files can be linked on the basis of a record identifier. The record identifier is the first field/s in each file. Each record contains a number (UqNr) which constitutes a unique household identifier. All records with a given household identifier, no matter which file they are in, belong to the same household. For individuals, a further two digits constitute the Person number (PersonNr). When these are added to the household identifier, a unique individual identifier is created. Again, these can be used to link records from the PERSON and WORKER files. The syntax needed to merge information from different files will differ according to the statistical package used.

## **METHODOLOGY**

### ***Sample design***

For the LFS a rotating panel sample design is being used, to allow for measurement of change in people’s employment situation over time. The same dwellings are visited on, at most, five different occasions. After this, new dwelling units are included for interviewing from the same PSU in the master sample. This means a rotation of 20% of dwelling units each time.

The database of enumerator areas (EAs) established during the demarcation phase of Census ’96 constituted the sampling frame for selecting EAs for the LFS. Small EAs consisting of fewer than 100 dwelling units were combined with adjacent EAs to form primary sampling units (PSUs) of at least 100 dwelling units, to allow for repeated sampling of dwelling units within each PSU. The sampling procedure for the master sample involved explicit stratification by province and within each province, by urban and non-urban areas. Independent samples of PSUs were drawn for each stratum within each province. The smaller provinces were given a disproportionately large number of PSUs compared to the bigger provinces. Simple random sampling was applied to select 10 dwelling units to visit in each PSU as ultimate sampling units. If more than one household is found in the same dwelling unit all such households are interviewed.

Altogether, 3 000 PSUs were drawn for the master sample, by means of probability proportional to size principles in each stratum. The measure of size was the number of dwelling units in each PSU. A subset of 1 000 PSUs was drawn for the pilot LFS of February 2000. This was increased to 3 000 PSUs for September 2000 and February 2001, in which the same 30 000 dwelling units were visited. In September 2001 a new sample of 30 000 dwelling units was drawn. In February 2002, 80% of the dwelling units sampled in September 2001 were visited again. The remaining 20% comprised new dwelling units. The same rotation procedure has been implemented for all subsequent rounds.

A new master sample will be drawn in September 2004 benchmarked to Census 2001 for the LFS for the next five years.

### **Weights**

A two-stage weighting procedure was applied to the LFS of March 2004.

The PSU inclusion probability is given by

$$P_{PSU} = \frac{n_{PSU}}{N_{PSU}} n_s,$$

where  $n_{PSU}$  is the number of households constituting the selected PSU during census fieldwork,  $n_s$  is the number of PSUs per stratum, and  $N_{PSU}$  is the number of households constituting the selected stratum during census fieldwork.

The household inclusion probability per PSU is given by

$$P_{HH} = \frac{n_{HH}}{H_{HH}},$$

where  $n_{HH}$  is the number of selected dwelling units per PSU,  $H_{HH}$  is the number of dwelling units in the PSU in question at a particular time different from the census time.

The non-response adjustment factor is given by  $\frac{1}{r_{HH}}$ , where  $r_{HH}$  is the response rate and is given by  $r_{HH} = \frac{n_{RESP}}{n_T}$  where  $n_{RESP}$  is the number of responding households and  $n_T$  is the total number of visited households (in the sampled dwelling units) per PSU. The sample weights adjusted for non-response are now given by

$$W_{HH} = \frac{1}{P_{PSU} \cdot P_{HH} \cdot r_{HH}}$$

A SAS macro called CALMAR was used to benchmark  $W_{HH}$  to the population mid-year estimates. The mid-year estimates were adjusted to give population estimates for March 2004 (when survey fieldwork took place).

### Estimation and use of standard errors

The published results of the Labour Force Survey are based on representative probability samples drawn from the South African population, as discussed in the section on sample design. Consequently, all estimates are subject to sampling variability. This means that the (sample) estimates may differ from the figures (i.e. population figures) that would have been produced if the entire South African population had been included in the survey. The measure usually used to indicate the likely difference between a sample estimate and the corresponding population figure is the *standard error (SE)*, which measures the extent to which an estimate might have varied by chance because only a sample of the population was included. There are about two chances in three that the sample estimate will differ by less than one standard error from the population figure and about 19 chances in 20 that the difference will be less than two standard errors. Another measure of the likely difference is the *relative standard error* (or the *coefficient of relative variation, or CV*) which is defined as the standard error of the estimate divided by the size of the estimate, and is usually expressed as a percentage.

There are two major factors which influence the value of a standard error. The first factor is the sample size. Generally speaking, the larger the sample size, the more precise (accurate) the estimate and the smaller the standard error. Consequently, in a national household survey such as the LFS, one expects more precise estimates at the national level than at the provincial level due to the larger sample size involved. The second factor is the variability between households of the parameter of the population being estimated, for example, the number of unemployed persons in the household.

For every survey, Statistics South Africa now calculates the standard errors and relative standard errors for a variety of the estimates shown in its publications. Estimates are calculated, not only of various population parameters but also for the many subclasses of the country, which include segregated classes (e.g. explicit strata, such as provinces or urban/rural division or combinations of these) as well as cross-classes (e.g. gender, age groups, gender by age groups). These different subclasses represent a large variety of sample sizes. Smoothing of the calculated standard errors is obtained by fitting regression models to the relative standard errors, which are then represented in graphical form. Given the size of

the estimate and the population parameter under consideration, an approximate value of the relative standard error of the estimate can be obtained (read off) from the relevant graph. Multiplication of this approximate value of the relative standard error with the estimate itself then gives an approximate value of the SE of the estimate, viz.

$$(1) \quad SE(\text{estimate}) = CV(\text{estimate}) \times \text{estimate}$$

The formula in this form, however, is not applicable to ratio estimates, such as the unemployment rate, and has to be changed to:

$$(2) \quad SE(\text{ratio estimate}) = CV(\text{ratio estimate}) \times (\text{numerator of ratio estimate})$$

For example:

$$(3) \quad SE(\text{Unemployment rate}) = CV(\text{Unemployment rate}) \times (\text{est. no. of unemployed persons})$$

Note that there are **different graphs** to be used for the different population parameters for obtaining the CV estimate.

The **95% confidence intervals of a population parameter** can be obtained as follows:

$$\text{lower 95\% confidence limit of a population parameter} = \text{estimate} - 1.96 * SE(\text{estimate})$$

and

$$\text{upper 95\% confidence limit of a population parameter} = \text{estimate} + 1.96 * SE(\text{estimate}).$$

The *confidence coefficient*, i.e. 95%, of a 95% confidence interval of a population parameter could be interpreted as the success rate of the calculated confidence interval, viz.

$$\{\text{estimate} - 1.96 * SE(\text{estimate}); \text{estimate} + 1.96 * SE(\text{estimate})\}$$

to include or to contain the value of the population parameter.

## DATA FILE: PERSON

*Unique number (UqNr)* (@1 13.)  
Unique Household Identifier

Note: This is the unique household identifier, which can be used to link data from this file with data for the same household from other files.

*Person number (PersonNr)* (@14 2.)  
Person (respondent) number within Household  
Valid range: 1 – 30

Note: The two fields above create a 15-digit unique person identifier, which can be used to link data from this file with data for the same individuals from other files.

*Province (Prov)* (@16 1.)  
South African provinces  
Derived variable: Derived from the first digit of the Unique Number.  
Valid range: 1 – 9

### Final code list

- 1 = Western Cape
- 2 = Eastern Cape
- 3 = Northern Cape
- 4 = Free State
- 5 = KwaZulu-Natal
- 6 = North West
- 7 = Gauteng
- 8 = Mpumalanga

## FLAP

*Stayed Nights (B\_4Night)* (@17 1.)

<b>B.1</b>	<b>Has ..... stayed here for at least four nights on average per week during the last four weeks?</b> 1 = YES 2 = No → <i>End of questions for this person</i>
------------	--

### Note to users

This question is asked for each person found in the selected dwelling. Those who are not household members (those who haven't spent at least four nights per week) would be eliminated on the second category (2 = No). The instruction in this question is to end the interview for those who have answered "No" in this question. It is through this question where household members are identified within the selected dwelling.

### Universe

Every person who has stayed in the households in selected dwelling units at least four nights a week in the four weeks prior the interview.

### Final code list

- 1 = Yes

*Stayed March (B\_Sep03)* (@18 1.)

<b>B.2</b>	<b>Did ..... stay in this household in September 2003?</b>
------------	--

	1 = YES 2 = NO
--	-------------------

**Note to users**

This question is asked for each person found in the selected dwelling. It seeks to find out if the household members who are present in the household during the survey were also present during the survey conducted in September 2003. It is through this question that permanent household members are identified within the selected dwelling.

**Universe**

Every person who has stayed in the households in selected dwelling units at least four nights a week in the four weeks prior the interview.

**Final code list**

- 1 = Yes
- 2 = No
- 9 = Unspecified

*Gender (C Gender)*

(@19 1.)

<b>C</b>	<b>Is ..... a male or a female?</b> 1 = MALE 2 = FEMALE
----------	---

**Note to users**

This question is asked for all household members, to determine their gender. The enumerators are instructed not to assume the gender of the members of the households by just looking at people’s names or physical appearances. In this instance they have to ask the respondent the gender of each member of the household without any assumptions.

**Universe**

Every person who has stayed in the households in selected dwelling units at least four nights a week in the four weeks prior the interview

**Final code list**

- 1 = Male
- 2 = Female
- 9 = Unspecified

*Age (Age)*

(@20 3.)

<b>D</b>	<b>How old is .....? (In completed years - In figures only)</b> <i>Less than 1 year = 00.</i>
----------	--

**Note to users**

This question is asked to find out the age of the household members. This is asked for each member of the household. The instruction is to write the years in whole numbers and not in words. Moreover, these years must be completed, thus if a person is two years and six months, the instruction is to write the two completed years. For those children who are less than a year, the instruction is to write 00.

**Universe**

Every person who has stayed in the households in selected dwelling units at least four nights a week in the four weeks prior the interview.

**Final code list**

- Less than 1 year = 0*
- Valid range: 0 – 113
- Unspecified: 999

Race (E race)

(@23 1.)

<b>E</b>	<b>What population group does ..... belong to?</b> 1 = AFRICAN/BLACK 2 = COLOURED 3 = INDIAN/ASIAN 4 = WHITE 5 = OTHER, <i>specify</i>
----------	---

**Note to users**

This question is asked to determine the population group of persons from the selected dwelling. The respondent must answer for each member without any assumptions. In this instance the enumerator is also instructed not to make any conclusions, which may be influenced by his observation or using people’s names during the interview. This question may seem very sensitive to some respondents especially in this post apartheid era, but it is really important to find out the composition of the South African population.

**Universe**

Every person who has stayed in the households in selected dwelling units at least four nights a week in the four weeks prior the interview.

**Final code list**

- 1 = African/Black
- 2 = Coloured
- 3 = Indian/Asian
- 4 = White
- 5 = Other

**SECTION 1**

Marital status (Q11aMari)

(@24 1.)

<b>1.1.a</b>	<b>What is .....’s present marital status?</b> 1 = MARRIED OR LIVING TOGETHER AS HUSBAND AND WIFE 2 = WIDOW/WIDOWER 3 = DIVORCED OR SEPARATED 4 = NEVER MARRIED
--------------	---

} → **Go to Q 1.2**

**Note to users**

This question is about the marital status of the members of the household. There are different kinds of marriages in South Africa, even if a couple is living together as husband and wife they are regarded to be married. Both modern and traditional marriages are considered in this question.

If the response is widow/widower, divorced or separated and never married the enumerator is instructed to go to Q 1.2, which is on language most often spoken at home.

**Universe**

Every person who has stayed in the households in selected dwelling units at least four nights a week in the four weeks prior the interview.

**Final code list**

- 1 = Married or living together as husband and wife
- 2 = Widow/Widower
- 3 = Divorce or Separated
- 4 = Never married
- 9 = Unspecified

*Spouse/partner (Q11bSpou)*

(@25 1.)

<b>1.1.b</b>	<b>Does .....’s spouse/partner live in this household?</b> 1 = YES 2 = No <b>→ Go to Q 1.2</b>
--------------	---

**Note to users**

This question is only applicable for those people who said “Yes” in (Q 1.1.a), thus “Married or living together as husband and wife”. It is through this question that it will be seen on average, in how many households partners live together.

**Universe**

Only those people who are married or living together as husband and wife.

**Final code list**

- 1 = Yes
- 2 = No
- 8 = Not applicable
- 9 = Unspecified

*Spouse number (Q11cPsnN)*

(@26 2.)

<b>1.1.c</b>	<i>If 1.1.b = 1</i> <b>Which person is the spouse/partner of .....?</b> <i>Give person number</i>
--------------	---

**Note to users**

This question is only applicable for those people who said “Yes” in (Q 1.1.b), thus “Married or living together as husband and wife”. It confirms the information on the previous question, which seeks to determine whether couples within the visited household live together or not.

**Universe**

Only applicable to those living in partners within the selected dwelling unit.

**Final code list**

- Valid range: 1 – 14
- Not applicable: 88
- Unspecified: 99

*Language (Q12HLang)*

------------	--

**Note to users**

This question seeks to determine which language members of the household speak most often at home. South Africa has eleven official languages.

**Universe**

Every person who has stayed in the households in selected dwelling units at least four nights a week in the four weeks prior the interview

**Final code list**

**If other code** → Go to Q 1.4

### Note to users

This question is applicable to all household members. The enumerators are instructed that it is only those qualifications already obtained which must be entered. That means the current level, that a person is still busy with is not applicable. It is very important to complete each record even if the person has not attended school. The enumerators are instructed to record diploma and certificates that are of at least six months duration.

------------	--	---	------------------------

**Note for users**

This question seeks to establish how many people have vocational training because of the increased recognition of the importance of this sort of training. Vocational training can help people earn a living either by getting a (better) paying job or by starting their own businesses. The instruction to the interviewer is to go to Q1.7.a if the answer to this question is NO or DON'T KNOW.

**Universe**

**Note to users**

This question is asked for all household members, to determine their gender. This question is only applicable if there is a “Yes” in the previous question, which determines whether a person is a household member or not. The enumerators are instructed not to assume the gender of the members of the households by just looking at people’s names or physical appearances. In this instance they have to ask the respondent the gender of each member of the household without any assumptions.

**Note to users**

This question is applicable to all household members aged 15 and above, regarding their involvement in the economic activities in the seven days prior the interview. This is part of the questionnaire where there would be a differentiation between economically active population and those who are not economically active. The instruction to the enumerators is that they should consider those activities that lasted for an hour within the seven days. In order to be certain that the categories have been answered there should either be “Yes” or “No” in all of them. Most importantly, is that if there is “Yes” to any part of this question there should be skip to Section 4. If all the categories are “No” there should be a continuation to the next question.

---------------	--

**Note to users**

This question is applicable to household members who have ever worked. It is important that the main tasks should be in English as the occupational codes are only in that language. The instruction to the enumerator is to ask the respondent the main tasks or duties done in his/her last job given in Q 3.13.a.

**Universe**

All household members aged 15 and did not have jobs to return to in the four weeks prior the interview but did not look for work.

---------------	---

**Note to users**

This question is applicable to household members who have been performing certain economic activities in the seven days prior the interview. It is important that the service or main goods are in English as the industry codes are only in this language. Although a person may have certain roles and responsibilities within the company she/he is working for, the enumerator is instructed to record the main goods or services produced by the company.

**Note to users**

This is applicable to all persons unemployed or not economically active regardless of whether a person has worked before or not. The interest in this question is to find out how people support themselves even though they are not working. The enumerator is instructed to ask all the given categories. There should either be a “Yes” or a “No” for each category. For any other reason that is not categorised the enumerator has to complete the information in the provided space. If the answer is code “1 = Did odd jobs during the past seven days ” where a person “did odd jobs during the seven days prior the interview” the instruction is to go back to Q2.1.

------------	--

#### **Note to users**

This question is about the dwelling the household occupies. The interest is on the main house and also considers the other dwelling if there is more than one structure that belongs to the household. The instruction to the enumerator is to make sure the respondent understands the kind of information requested. For example the other dwelling cannot exist without the main dwelling while the latter can without the former. For any other material used that is not specified in the given categories, there is a provision for them on code 11, to complete the required information. There should be only one mark for each category.

**Note to users**

This question is about the main material used for the walls and roof of the main dwelling. The instruction to the enumerator is to consider the main material used even in cases where more than one type is used. The very same situation applies to the roof of the occupied dwelling. For any other material used that is not specified in the given categories, there is a provision on code 13, to specify it. There can only be one mark for each category.

#### **DATA FILE: STRATUM\_ PSU**

The LFS' is based on a multistage stratified cluster sample (i.e. complex samples). The sampling population is first stratified into explicit strata, then pre-specified numbers of primary sampling units (i.e. PSU's) are drawn in the strata, whereupon a fixed number of households are drawn in each drawn PSU's. The consequence of this is that statistical techniques of analysis based on a simple random sample design will give liberal (i.e. too significant) results. This is the case with most generally available statistical software packages. However, dedicate software is available which takes the complexity of the of the sample design into consideration and which requires stratum and PSU numbers. The STRATUM\_PSU data file is supplied for this type of analysis and can be merged with any of the other three data files i.e. PERSON, WORKER and HOUSE by the variable unique number (UqNr), position 1 to 13.

This file contains stratum and PSU numbers.

*Unique number (UqNr)*

(@1 13.)

Unique household identifier

Note: This is the unique household identifier which can be used to link data from this file with data for the same household from other files.

*Stratum number (Stratum)*

(@14 2.)

*PSU number (PSU)*

(@16 7.)

**Please Note:** To get rid of non-existing stratum numbers all records with invalid weights should be deleted after merging
