### Overview

**ABSTRACT**

The Labour Force Survey is a survey that collects data on the main characteristics of labour force, which are used to estimate the total labour force in our country.

The main aim of the survey is estimating the labour force volume, i.e. employed and unemployed population, where employment relates to work in both formal and informal section.

Additionally, LFS deals with characteristics of employment (professional status of the employed persons, their activity, occupation, rights realized at work...) and unemployment (acquired education, duration of job seeking, previous working experience...),

as well as characteristics of inactive population - their education, age, income source and readiness for involvement in labour market. In 2012 the LFS was conducted twice: in October and in April.

The survey was conducted in April and November 2012 on the territory of the Republic of Serbia. In determining the main contingents of labour force we applied the international recommendations

and definitions and therefore the data of this survey present the main source of labour force statistics that are internationally comparable, by their contents and regarding the applied methodology.

# Sampling

## Sampling Procedure

---

Frame for sample selection for the first stage is the list of enumeration areas with 20 or more households, and for the second stage the frame is made of the lists of households for the selected enumeration areas. The sample was reduced by 1% in relation to the basic set.

Sample size. For 2012 survey the sample included 20048 households. The anticipated sample size is increased by 1432 households in relation to 2011. The sample was increased in order to reduce the effect of non-responsiveness, which is considerably influenced by the repeated interviewing of households. The number of enumeration areas selected for the sample remained unchanged, i.e. 2148. In enumeration areas that are the first time selected for the sample in 2011 and 2012 we selected 10 households in each, and in the repeated enumeration areas we selected 8 households in each.

Sample realization. 44113 persons were interviewed, and for 39089 persons collected were the data on their working activity, which makes 0.6% of the total number of population aged 15 and over.

System of estimation that was applied corresponds to two-stage stratified sample, where the selection procedure for the first stage is in proportion to the size, repeated, while for the second stage it is simple random selection, and not repeated.

## Deviations from Sample Design

---

The sample is designed in a way that the survey can be carried out several times a year (biannually, quarterly and all year round).

## Weighting

---

The basic weight resulting from the applied sampling design was corrected to allow for non-response.

# Questionnaires

## Overview

---

Data source for the Survey are statements of persons responding to interviewers, while the sources for administrative data are the records that the personnel departments of reporting units keep pursuant to the Act on labour records.

## Data Collection

### Data Collection Dates

---

<b>Start</b>	<b>End</b>	<b>Cycle</b>
2012	2012	N/A

### Time Periods

---

<b>Start</b>	<b>End</b>	<b>Cycle</b>
2012-04-23		Quarterly

### Data Collection Mode

---

Face-to-face [f2f]

### Data Collection Notes

---

Method of collection is different: in the Labour Force Survey the data are collected from the persons, i.e. members of the households selected for the sample, while the data from administrative sources are collected from the reports by enterprises, institutions, cooperatives or other organizations.

### Questionnaires

---

Data source for the Survey are statements of persons responding to interviewers, while the sources for administrative data are the records that the personnel departments of reporting units keep pursuant to the Act on labour records.

# Data Processing

## Other Processing

---

For coding and processing the data collected by this survey, the following classifications were used:

1. Classification of activities, which is comparable to the UN classification of activities, ISIC - rev. 4 and the EU classification NACE, rev. 2;
2. Classification of occupations, which is comparable to the International standard classification of occupations, ISCO - 88;
3. List of schools, which is comparable to the International Standard Classification of Education, ICSED - 1997;
4. Classification of positions/professional status of employed persons, which is comparable to the International Classification of Status in Employment, ICSE

## Data Appraisal

### Estimates of Sampling Error

Sampling errors are published for the main population features only (tables A and B). Along with coefficient of variation (CV), as relative measures of estimation reliability (%), provided are also 95% intervals of confidence for the parameters.
