### ABSTRACT

The main objective of this survey is to estimate the numbers and characteristics of the labor force in Thailand and in different regions periodically. The Labor Force Survey has been undertaken by the National Statistical Office since 1963. Beginning in 1971, two rounds of the survey for the whole kingdom had been conducted each year, the first round enumeration was held during January-March coinciding with the non-agricultural season and the second round during July-September coinciding with the agricultural season. From 1984-1997, the survey has been conducted 3 rounds a year. And since 1998, the fourth rounds of the survey for the whole kingdom has been conducted additionally. Since then, the Labor Force Survey has been undertaken 4 rounds a year; the first round in February, the second in May, the third and the fourth round in August and November respectively. The statistical data derived from this quarter of the survey include:

1. the number of persons in and out of the working age (15 years and over) by sex
2. the number of working age population by labor force status, age, sex, marital status, educational attainment
3. the number of employed persons by interesting characteristics such as age, sex, educational attainment, occupation, industry, work status, hours work.
4. the number of unemployed persons by interesting characteristics e.g. duration of searching for job, type of previous work.

NB: the LFS documented here contains data for all months of the year 2010. However, usually the LFS Q3 is taken as the standard for Thailand with reference to that year. The questionnaire attached refers to that of Q3, minus the module on informal employment.

### KIND OF DATA

Sample survey data [ssd]

### UNITS OF ANALYSIS

- Households
- Individuals 15 years old and above

## Scope

---

### NOTES

The scope of the study includes:

- Characteristic of Household Member
- Education (person 15 or above)
- Employment (person 15 or above)
- Wanting more work during the last 7 days before interview's date

- Wage

# Sampling

## Sampling Procedure

---

A Stratified Two - Stage Sampling was adopted for the survey. Bangkok Metropolis and provinces were constituted strata. The primary and secondary sampling units were blocks for municipal areas /villages for non - municipal areas and private households / persons in the special households respectively.

### Stratification

Bangkok Metropolis and provinces were constituted strata. There were altogether 76 strata. Each stratum was divided into two parts according to the type of local administration, namely municipal areas and non - municipal areas.

### Selection of primary sampling unit

The sample selection of blocks / villages were performed separately and independently in each part by using probability proportional to size - total number of households. The total sample blocks /villages was 3,864 from 109,966 blocks / villages.

### Selection of secondary sampling unit

Private households were our ultimate sampling units. A new listing of private households were made for every sample block / village to serve as the sampling frame. In each sample block / village, a systematic sample of private households were selected with the following sample size:

Municipal areas : 15 sample households per block

Non - municipal areas : 12 sample households per village

Before selecting sample private households in each sample block / village, the list of private households was rearranged by household ' s size - member of the household.

All special households located within the sample areas were included in the sample and the persons in the special household were systematically selected for the interviewing.

## Weighting

---

The survey results were presented at provincial level and regional level. At regional level, the results were presented separately for the Bangkok Metropolis and the remaining 75 provinces were classified by region, municipal areas and non-municipal areas.

# Questionnaires

## Overview

---

Thailand Labour Force Survey questionnaire consists of five parts:

Part 1: Characteristic of Household Member

Part 2: Education (Ask persons 15 years and over)

Part 3: Employment, ask persons 15 years and over

Part 4: Wanting more work during the last 7 days before interview's date

Part 5: Wage or salary (wage, supplementary benefits, and non cash benefits)

## Data Collection

### Data Collection Dates

Start	End	Cycle
2010-01	2010-12	N/A

### Data Collection Mode

Face-to-face [f2f]

### Data Collection Notes

Labor force information for this survey quarterly which was conducted during the 1st-12th of January-March 2010 was obtained through interviews head or member of households of 4,800 households in the Bangkok, 48,960 households in other municipal areas and 34,920 households in non-municipal areas or a total of 83,880 households throughout the kingdom. Forty four enumerators with previous experience in survey operations were employed in the Bangkok, while in the other provinces (changwats), the field staff comprised 830 enumerators.

### Questionnaires

Thailand Labour Force Survey questionnaire consists of five parts:

Part 1: Characteristic of Household Member

Part 2: Education (Ask persons 15 years and over)

Part 3: Employment, ask persons 15 years and over

Part 4: Wanting more work during the last 7 days before interview's date

Part 5: Wage or salary (wage, supplementary benefits, and non cash benefits)

### Data Collectors

Name	Abbreviation	Affiliation
National Statistical Office of Thailand	NSO	Ministry of Information and Communication Technology

## **Data Processing**

### **Other Processing**

---

Information of the establishments in provincial areas was processed at the provincial office with the technical supports from the central office e.g. preparation of the software programs for data entry and tabulation, and drafting form of the report. Those data for regions and the whole kingdom, as well as the detailed information of the establishments were processed at the central office.
