

# Occupied Palestinian Territory - Labour Force Survey 2014, First Quarter

Report generated on: December 8, 2017

Visit our data catalog at: <http://www.ilo.org/microdata/index.php>

## Overview

### Identification

---

**ID NUMBER**

PSE\_2014\_LFS\_Q1\_v01\_M\_ILO

### Version

---

**VERSION DESCRIPTION**

Version 01

### Overview

---

**ABSTRACT**

Focuses mainly on labour force key indicators, main characteristics of the employed, unemployed, underemployed and persons outside labour force, labour force according to level of education, distribution of the employed population by occupation, economic activity, place of work, employment status, hours and days worked and average daily wage in NIS for the employees. The main objective of collecting data on the labour force and its components, including employment, unemployment and underemployment, is to provide basic information on the size and structure of the Palestinian labour force. Data collected at different points in time provide a basis for monitoring current trends and changes in the labour market and in the employment situation. These data, supported with information on other aspects of the economy, provide a basis for the evaluation and analysis of macro-economic policies.

**KIND OF DATA**

Sample survey data [ssd]

**UNITS OF ANALYSIS**

- Household

- Individual.

### Scope

---

**NOTES**

The lfs questionnaire consists of four main sections:

Identification Data:

The main objective for this part is to record the necessary information to identify the household, such as, cluster code, sector, type of locality, cell, housing number and the cell code.

Quality Control:

This part involves groups of controlling standards to monitor the field and office operation, to keep in order the sequence of questionnaire stages (data collection, field and office coding, data entry, editing after entry and store the data.

Household Roster:

This part involves demographic characteristics about the household, like number of persons in the household, date of birth, sex, educational level...etc.

Employment Part:

This part involves the major research indicators, where one questionnaire had been answered by every 10 years and over household member, to be able to explore their labour force status and recognize their major characteristics toward employment status, economic activity, occupation, place of work, and other employment indicators.

**TOPICS**

Topic	Vocabulary	URI
Agriculture & Rural Development	ILO	
Economic Policy	ILO	
Education	ILO	
Environment	ILO	
Financial Sector	ILO	
Migration & Remittances	ILO	
Health	ILO	
Household Income	ILO	
Employment	ILO	
Informal Work	ILO	
Other Work Activities	ILO	
Unemployment	ILO	
Gender	ILO	

**KEYWORDS**

Unemployment, Employment, Labour Force, Man Power

## Coverage

---

**GEOGRAPHIC COVERAGE**

The Data are representative at region level (West Bank, Gaza Strip), locality type (urban, rural, camp) and governorates.

**UNIVERSE**

The survey covered all the Palestinian persons aged 10 years and above who are a usual residence in the Palestinian Territory.

## Producers and Sponsors

---

**PRIMARY INVESTIGATOR(S)**

Name	Affiliation
Palestinian Central Bureau of Statistics	State of Palestine

**OTHER PRODUCER(S)**

Name	Affiliation	Role
Palestinian Central Bureau of Statistics	Palestinian National Authority	Product the survey

**FUNDING**

# Sampling

## Sampling Procedure

---

### Sampling Frame

The sampling frame consists of the master sample, which was updated in 2011: each enumeration area consists of buildings and housing units with an average of about 124 households. The master sample consists of 596 enumeration areas; we used 498 enumeration areas as a framework for the labor force survey sample in 2012 and these units were used as primary sampling units (PSUs).

### Sampling Frame and Target Population:

#### Target Population:

It consists of all individuals aged 10 years and older normally residing in their households in Palestine during 2014.

#### Sample Design:

The sample is a two-stage stratified cluster random sample.

#### Stratification:

Two levels of stratification were made:

Stratification by Governorates.

Stratification by type of locality which comprises:

(a) Urban (b) Rural (c) Refugee Camps

#### Sample Rotation:

Each round of the Labor Force Survey covers all of the 498 master sample enumeration areas. Basically, the areas remain fixed over time, but households in 50% of the EAs were replaced in each round. The same households remain in the sample for two consecutive rounds, left for the next two rounds, then selected for the sample for another two consecutive rounds before being dropped from the sample. An overlap of 50% is then achieved between both consecutive rounds and between consecutive years (making the sample efficient for monitoring purposes).

## Deviations from Sample Design

---

The sample is two stage stratified cluster sample with two stages :

First stage: we select a systematic random sample of 494 enumeration areas for the whole round ,and we excluded the enumeration areas which its sizes less than 40 households.

Second stage: we select a systematic random sample of 16 households from each enumeration area selected in the first stage, se we select a systematic random of 16 households of the enumeration areas which its size is 80 household and over and the enumeration areas which its size is less than 80 households we select systematic random of 8 households.

#### Sample strata:

The population was divided by:

- 1- Governorates
- 2- Type of Locality (urban, rural, refugee camps).

## Response Rate

---

The response rate was 90.3%. The survey sample consists of about 30,464 households of which 25,736 households completed the interview; whereas 16,891 households from the West Bank and 8,845 households in Gaza Strip. Weights were modified to account for non-response rate. The response rate in the West Bank reached 88.8% while in the Gaza Strip it

reached 93.3%.

## Weighting

---

NB: Please note that only relative weights are available for these microdata.

Relative weights do not allow users to estimate the population at national level but only corrects, inside the sample, post-stratification and non-response effects.

The weight of statistical units (sampling unit) in the sample is defined as the mathematical inverse of the selection probability where the sample of the survey is two stage stratified cluster sample, so In the first stage, we calculate the weight of enumeration areas which depending on the probability of each enumeration area (a systematic random sample), then In the second stage we calculate weight of households in each enumeration area, Initial households weights resulted from product of weight of first stage and weight of second stage, final households weights obtained after adjustment of initial weights with the households estimates of the middle of each quarter of the year 2014 on the level of design strata (governorate, locality type ).

For the 10 years and over persons file we add the final household weight for each person, then we adjust the initial person weight with the persons estimates of the middle of each quarter of the year 2014 on the level of Region (West bank, Gaza strip), Sex (male, female ), Five -year age groups (14 groups) then we obtain the final adjusted person weight.

# Questionnaires

## Overview

---

The lfs questionnaire consists of four main sections:

**Identification Data:**

The main objective for this part is to record the necessary information to identify the household, such as, cluster code, sector, type of locality, cell, housing number and the cell code.

**Quality Control:**

This part involves groups of controlling standards to monitor the field and office operation, to keep in order the sequence of questionnaire stages (data collection, field and office coding, data entry, editing after entry and store the data.

**Household Roster:**

This part involves demographic characteristics about the household, like number of persons in the household, date of birth, sex, educational level...etc.

**Employment Part:**

This part involves the major research indicators, where one questionnaire had been answered by every 10 years and over household member, to be able to explore their labour force status and recognize their major characteristics toward employment status, economic activity, occupation, place of work, and other employment indicators.

## Data Collection

### Data Collection Dates

Start	End	Cycle
2014	2014	N/A

### Time Periods

Start	End	Cycle
2014-01-01		First Quarter

### Data Collection Mode

Computer Assisted Personal Interview [capi]

### Data Collection Notes

The purpose of the training courses was to teach participants the main skills needed to conduct interviews. Two training courses were held, one in Ramallah for the West Bank trainees, and one in Gaza City for Gaza Strip trainees. Each course consisted of two parts: one on survey methodology including survey design, questionnaire design, interviewing techniques, and field operations; and one part on specifications of the labour force survey, including concepts and definitions, fieldwork procedures, data collection, editing, coding, tips for asking questions and recording answers, as well as field team organization and field supervision

### Questionnaires

The lfs questionnaire consists of four main sections:

Identification Data:

The main objective for this part is to record the necessary information to identify the household, such as, cluster code, sector, type of locality, cell, housing number and the cell code.

Quality Control:

This part involves groups of controlling standards to monitor the field and office operation, to keep in order the sequence of questionnaire stages (data collection, field and office coding, data entry, editing after entry and store the data.

Household Roster:

This part involves demographic characteristics about the household, like number of persons in the household, date of birth, sex, educational level...etc.

Employment Part:

This part involves the major research indicators, where one questionnaire had been answered by every 10 years and over household member, to be able to explore their labour force status and recognize their major characteristics toward employment status, economic activity, occupation, place of work, and other employment indicators.

### Data Collectors

Name	Abbreviation	Affiliation
Palestinian Central Bureau of Statistics	PCBS	Palestinian National Authority

### Supervision

The purpose of the training courses was to teach participants the main skills needed to conduct interviews. Two training courses were held, one in Ramallah for the West Bank trainees, and one in Gaza City for Gaza Strip trainees. Each course consisted of two parts: one on survey methodology including survey design, questionnaire design, interviewing techniques, and field operations; and one part on specifications of the labour force survey, including concepts and definitions, fieldwork procedures, data collection, editing, coding, tips for asking questions and recording answers, as well as field team organization and field supervision.

## Data Processing

### Data Editing

---

All questionnaires were edited after data entry in order to minimize errors related data entry. Data editing took place at a number of stages through the processing including:

1. office editing and coding
2. during data entry
3. structure checking and completeness
4. structural checking of SPSS data files

### Other Processing

---

Both data entry and tabulation were performed using the ACCESS and SPSS software programs. Data entry was organized in one files, corresponding to the main parts of the questionnaire. A data entry template was designed to reflect an exact image of the questionnaire, and included various electronic checks: logical check, range checks, consisting checks and cross-validation. Complete manual inspection of results after data entry was performed, and questionnaires containing field-related errors were sent back to the field for correction.

## **Data Appraisal**

### **Estimates of Sampling Error**

Sampling errors are random outcomes of the sample design, and are, therefore, easily measurable. A description of the estimated variances and the effects of the sample design on sampling errors are provided in the report and Table A. In general, the assessments is that the sample size and sample design provide reliable estimates of the main labour force indicators.

Estimates of Sampling Error: Since the data reported here are based on a sample survey and not on complete enumeration, they are subject to two main types of errors: sampling errors and nonsampling errors.

### **Other forms of Data Appraisal**

This part involves groups of controlling standards to monitor the field and office operation, to keep in order the sequence of questionnaire stages (data collection, field and office coding, data entry, editing after entry and store the data).

Author(s)	Palestinian Central Bureau of Statistics
Date	2015-06-11
Country	Palestine
Language	Arabic
Contributor(s)	Palestinian Central Bureau of Statistics
Publisher(s)	Palestinian Central Bureau of Statistics
Description	he Palestinian Central Bureau of Statistics started conducting a continuous labour force household survey since October 1995. The main objective of collecting data on the labour force and its components, including employment, unemployment and underemployment, is to provide basic information on the size and structure of the Palestinian labour force. Data collected at different points in time provide a basis for monitoring current trends and changes in the labour market and in the employment situation. These data, supported with information on other aspects of the economy, provide a basis for the evaluation and analysis of macro-economic policie
