Overview

ABSTRACT

The main objective of this survey is to estimate the number and characteristics of the labor force in the country and in different regions periodically. The statistical data derived from the survey include:

1. the number of persons in and out of the working age (15 years and over) by sex
2. the number of working age population by labor force status, age, sex, marital status, educational attainment
3. the number of employed persons by interesting characteristics such as age, sex, educational attainment, occupation, industry, work status, hours work,
4. the number of unemployed persons by interesting characteristics e.g. duration of searching for job, type of previous work.

KIND OF DATA

Sample survey data [ssd]

UNITS OF ANALYSIS

- Households

- Individuals

Scope

NOTES

Topics covered by the Labour Force Survey:

- Geographic area identification, date of interview, date of editing and coding, and survey enumeration information
- Demographic characteristics: age, sex, marital status, educational attainment, relationship to household head
- Main labour related characteristics: employment, unemployment, underemployment, hours of work, wages (wage, supplementary benefits, and non cash benefits), employment related benefits, informal employment, usual activity, absence from work
- Other labour related characteristics: industry, occupation, status in employment, institutional sector (public/private), size of establishment, duration of employment, existence of more than one job, duration of unemployment, characteristics of the last job, search for another job, methods of looking for work, reasons for not being in the labour force

Sampling

Sampling Procedure

Sample design

A Stratified Two - Stage Sampling was adopted for the survey. Provinces were constituted strata. The primary and secondary sampling units were enumeration areas (EAs) for municipal areas and non - municipal areas and private households / persons in the collective households respectively.

Stratification

Provinces were constituted strata. Each stratum was divided into two parts according to the type of local administration, namely municipal areas and non - municipal areas.

Selection of primary sampling unit

The sample selection of enumeration areas were performed separately and independently in each part by using probability proportional to size - total number of households.

Selection of secondary sampling unit

Private households were our ultimate sampling units. A new listing of private households were made for every sample enumeration areas to serve as the sampling frame.
