Overview

ABSTRACT

Base on the statistical law and the National Strategy for sustainable Development of Statistical System 2016-2020 and vision for 2030, Ministry of Planning and Investment (MPI) throughout the Lao Statistics Bureau in cooperate with Ministry of Labor and Welfare has conducted the Lao Labor Force Survey in 2017. This is a nation-wide household based survey with a sample size of 10800 covering all 18 provinces. It aims to generate data at provincial level disaggregated by age, sex and geographic area on the size and characteristics of the labor force, employment , unemployment and other labor market characteristics of the population.

Sampling

Sampling Procedure

The 2015 Census of Population and Housing was applied for sampling frame for LFS 2017. Base on the Census, Lao PDR has a total population of 6,479,982 distributed into 1,197,926 households . The province of Savannakhet has the most population but Vientiane Capital has the most households. Population in Xaysomboun is lowest at 85,168, the province also has the lowest number of households at 14,316.

Two stage sampling is proposed, with selection of villages in the first stage and selection of households in the second stage. In the provincial domains, villages were selected using PPS (no need for stratification since there are fewer villages within each province). Second stage sampling comprise of systematic selection of 20 households from the updated list of households from the 2015 Census. Provincial Domains target 10,800 sample households at 3% and 6% margin of errors.
