Overview

ABSTRACT

Objectives:

The Labor Force Survey (LFS) aims to provide a quantitative framework for the preparation of plans and formulation of policies affecting the labor market.

Specifically, the survey is designed to provide statistics on levels and trends of employment, unemployment and underemployment for the country as a whole, and for each of the administrative regions.

Importance of the Labor Force Survey:

a. It provides a quantitative framework for the preparation of plans and formulation of policies affecting the labor market towards

1) creation and generation of gainful employment and livelihood opportunities

2) reduction of unemployment and promotion of employment

3) improvement of working conditions

4) enhancement of the welfare of a working person

b. It provides statistics on levels and trends of employment and unemployment and underemployment for the country and regions;

c. It is used for the projection of future manpower, which when compared with the future manpower requirements, will help identify employment and training needs;

d. It helps in the assessment of the potential human resource available for economic development; and

e. It identifies the differences in employment, unemployment, and underemployment according to the different economic, social and ethnic groups existing within the population.

KIND OF DATA

Sample survey data [ssd]

UNITS OF ANALYSIS

Individuals

Scope

NOTES

The survey involves the collection of data on the demographic and socio-economic characteristics of the population in general. It focuses on levels and trends of employment, unemployment and underemployment of the country with data breakdown for each of the regions.

TOPICS

Topic	Vocabulary	URI
Labor force		
Employment		
Unemployment		
Underemployment		

KEYWORDS

Labor force, Employment, Unemployment, Underemployment

Coverage

GEOGRAPHIC COVERAGE

The geographic coverage consists of the country's 17 administrative regions. The 17 regions are:

Region I - Ilocos,

Region II - Cagayan Valley,

Region III - Central Luzon,

Region IV-A - Calabarzon,

Region IV-B - Mimaropa

Region V - Bicol,

Region VI - Western Visayas,

Region VII - Central Visayas,

Region VIII - Eastern Visayas,

Region IX - Zamboanga Peninsula,

Region X - Northern Mindanao,

Region XI - Davao,

Region XII - Soccksargen,

Region XIII - National Capital Region (NCR),

Region XIV - Cordillera Administrative Region (CAR),

Region XV - Autonomous Region in Muslim Mindanao (ARMM)

Region XVI - Caraga,

Starting this July 2003 round of the Labor Force Survey, the generation of the labor force and employment statistics adopted the 2003 Master Sample Design.

- Using this new master sample design, the number of samples increased from 41,000 to around 51,000 sample households.

- The province of Basilan is grouped under Autonomous Region in Muslim Mindanao while Isabela City (Basilan) is now

grouped under Region IX. This is in consonance with the regional grouping under Executive Order No. 36.

- The 1992 four-digit code for Philippine Standard Occupational Classification (PSOC) and 1994 Philippine Standard Industry Classification (PSIC) were used in classifying the occupation and industry.

- Because of unavailability of data files for the province of Zamboanga Sibugay of Region IX and the provinces of Sulu and Lanao del Sur of ARMM on cut-off date, estimates at the national level and for the two regions exclude those of the said three provinces. Estimates for the three provinces will be included in the Final Results.

UNIVERSE

The LFS has as its target population, all household members of the sample housing units nationwide. A household is defined as an aggregate of persons, generally but not necessarily bound by ties of kinship, who live together under the same roof and eat together or share in common the household food. Household membership comprises the head of the household, relatives living with him such as his or her spouse, children, parent, brother or sister, son-in-law or daughter-in-law, grandson or granddaughter, and other relatives. Household membership likewise includes boarders, domestic helpers and non-relatives. A person who lives alone is considered a separate household.

Persons who reside in the institutions are not within the scope of the survey.

Sampling

Sampling Procedure

The sampling design of the Labor Force Survey (LFS) uses the sampling design of the 2003 Master Sample (MS) for Household Surveys that started July 2003.

Sampling Frame

As in most household surveys, the 2003 MS used an area sample design. The Enumeration Area Reference File (EARF) of the 2000 Census of Population and Housing (CPH) was utilized as sampling frame. The EARF contains the number of households by enumeration area (EA) in each barangay. This frame was used to form the primary sampling units (PSUs). With consideration of the period for which the 2003 MS will be in use, the PSUs were formed/defined as a barangay or a combination of barangays with at least 500 households.

Stratification Scheme

Stratification involves the division of the entire population into non-overlapping subgroups called strata. Prior to sample selection, the PSUs in each domain were stratified as follows:

- 1) All large PSUs were treated as separate strata and were referred to as certainty selections (self-representing PSUs). A PSU was considered large if it has a large probability of selection.
- 2) All other PSUs were then stratified by province, highly urbanized city (HUC) and independent component city (ICC).
- 3) Within each province/HUC/ICC, the PSUs were further stratified or grouped with respect to some socio-economic variables that were related to poverty incidence. These variables were: (a) the proportion of strongly built houses (PSTRONG); (b) an indication of the proportion of households engaged in agriculture (AGRI); and (c) the per-capita income (PERCAPITA).

Sample Selection

To have some control over the subsample size, the PSUs were selected with probability proportional to some estimated measure of size. The size measure refers to the total number of households from the 2000 CPH. Because of the wide variation in PSU sizes, PSUs with selection probabilities greater than 1 were identified and were included in the sample as certainty selections.

At the second stage, enumeration areas (EAs) were selected within sampled PSUs, and at the third stage, housing units were selected within sampled EAs. Generally, all households in sampled housing units were enumerated, except for few cases when the number of households in a housing unit exceeds three. In which case, a sample of three households in a sampled housing unit was selected at random with equal probability.

An EA is defined as an area with discernable boundaries within barangays, consisting of about 150 contiguous households. These EAs were identified during the 2000 CPH. A housing unit is a structurally separate and independent place of abode which, by the way it has been constructed, converted, or arranged, is intended for habitation by a household

Sample Size

The 2003 Master Sample consist of a sample of 2,835 PSUs of which 330 were certainty PSUs and 2,505 were non certainty PSUs. The number of households for the 2000 CPH was used as measure of size. The entire MS was divided into four sub-samples or independent replicates, such as a quarter sample contains one fourth of the PSUs found in one replicate; a half-sample contains one-half of the PSUs in two replicates. Thus, the survey covers a nationwide sample of about 51,000 households deemed sufficient to measure the levels of employment and unemployment at the national and regional levels.

Strategy for non-response

Replacement of sample households within the sample housing units is allowed only if the listed sample households had moved out of the housing unit. Replacement should be the household currently residing in the sample housing unit previously occupied by the original sample.

Deviations from Sample Design

Starting the July 2003 round of the Labor Force Survey, the generation of the labor force and employment statistics adopted

the 2003 Master Sample Design.

- Using this new master sample design, the number of samples increased from 41,000 to around 51,000 sample households.

- The province of Basilan is grouped under Autonomous Region in Muslim Mindanao while Isabela City (Basilan) is now grouped under Region IX. This is to adopt the regional grouping under Executive Order No.36.

- The 1992 four-digit code for Philippine Standard Occupational Classification (PSOC) and 1994 Philippine Standard Industry Classification (PSIC) were used in classifying the occupation and industry.

Weighting

Calculation of Basic Weights:

Following a standard approach, the weights to be used in analyzing surveys based on the 2003 MS are developed in three stages.

First, base weights are computed to compensate for the unequal selection probabilities in the sample design.

Second, the base weights are adjusted to compensate for unit non-response.

Third, the non-response adjusted weights are further adjusted to make some weighted sample distributions to conform to some known population totals.

Final Survey Weight

The final survey weight assigned to each responding unit is computed as the product of the base weight, the non-response adjustment, and the population weighting adjustment. The final weights should be used in all analyses to produce valid estimates of population parameters.

More detailed explanation on the estimation procedure is provided in the Technical Documents.

Questionnaires

Overview

ISH FORM 2 (LFS questionnaire) is a four-page, forty four-column questionnaire that is being used in the quarterly rounds of the Labor Force Survey nationwide. This questionnaire gathers data on the demographic and economic characteristics of the population.

On the first page of the questionnaire, the particulars about the geographic location, design codes and household auxiliary information of the sample household that is being interviewed are to be recorded. Certifications by the enumerator and his supervisor regarding the manner by which the data are collected are likewise to be made on this page.

The inside pages of the questionnaire contain the items to be determined about each member of the sample household. Columns 2 to 11 are for the demographic characteristics; columns 2 to 7A are to be ascertained of all members of the household regardless of age. Columns 8 to 9 are asked for members 5 years old and over, while column 10 is asked for members 5 to 24 years old, column 11, for 15 years old and over, while columns 12 to 16 are asked for members 5 years old and over. Items 18 to 44 on the other hand, are the series of items that will be asked of all the members 15 years old and over to determine their labor force and employment characteristics.

Most of the questions have pre-coded responses. The possible answers with their corresponding codes are printed at the bottom of the page for easy reference. Only the appropriate codes need to be entered in the cells.

Other items, however, require write-in entries such as column 14 (primary occupation) and column 16 (kind of business/industry), etc. For such items, it is required that the enumerator describes the primary occupation or kind of business/industry.

Supervision

The Regional Directors/Officer-In-Charge (RDs/OICs), Provincial Statistics Officers (PSOs), Regional and Provincial Staff were allotted a number of days to supervise the enumeration.

- 1) The RD/OIC coordinates with the PSOs and provides the general supervision to the staff of the provincial offices under the jurisdiction on all administrative matters and field operations relative to the survey.
- 2) The PSO supervises the activities of the personnel to ensure that the data collection is finished according to the timetable set.
- 3) The Regional and Provincial Statistician supervise in the field and ensure that all items in the questionnaire were asked, and review and edit questionnaires while still in their area of assignment and ensure that all sample households have corresponding questionnaire.

Central Office Statisticians were assigned to provinces to supervise and monitor the conduct of the survey.

Data Processing

Data Editing

Data processing involves two stages: manual processing and machine processing.

Manual processing is done at the provincial offices. This is the general review of the questionnaires. This process includes the folioing of the questionnaires, completeness and consistency checking of the responses, editing and coding of responses. This is done prior to machine processing.

The average output per day is 50 questionnaires.

Other Processing

Data entry, the transformation of information from the questionnaire to machine readable form, is done in the field offices.

Machine processing involved all operations that were done with the use of a computer and/or its accessories, that is, from data encoding to tabulation. Coded data were usually in diskettes or CDs.

Machine editing was preferred to ensure correctness of encoded information. Data entry errors as well as that of the manual processing were identified using a consistency check computer program and were given necessary corrections as per verification of the field offices.

Verification and validation of geographic identification, completeness checking and consistency checking and certification pass are also done at the central office.

CSPro was used in the data entry and tabulations.

Preliminary and final tabulations are done at the Central Office.

Decimals: 0	
Range: 1-2	

C25-Was this his first time to do any Work? (c25_pfwk)

File: LFS April 2007

Overview

Type: Discrete	Valid cases: 79070
Format: numeric	Invalid: 123186
Width: 1	
Decimals: 0	
Range: 1-2	

C26-Basis of Payment (Primary Occupation) (c26_pbis)

File: LFS April 2007

Overview

Type: Discrete	Valid cases: 37872
Format: numeric	Invalid: 164384
Width: 1	
Decimals: 0	
Range: 0-7	

C27-Basic Pay per Day (Primary Occupation) (c27_pbsc)

File: LFS April 2007

Overview

Type: Discrete	Valid cases: 32820
Format: numeric	Invalid: 169436
Width: 5	Minimum: 2
Decimals: 0	Maximum: 10000
Range: 0-99999	

C28-Other Job Indicator (c28_ojob)

File: LFS April 2007

Overview

Type: Discrete	Valid cases: 79070
Format: numeric	Invalid: 123186
Width: 1	
Decimals: 0	
Range: 1-2	

C30-Other Occupation (July 2003 - Jan 2005) (j02_otoc)

File: LFS April 2007

Overview

Type: Discrete	Valid cases: 0
Format: numeric	Invalid: 202256
Width: 1	
Decimals: 0	
Range: 1-93

Format: numeric	Invalid: 202256
Width: 1	
Decimals: 0	
Range: 1-99	

C33-Class of Worker (Other Occupation) (July 2003 - Jan 2005) (j04_ocls)

File: LFS April 2007

Overview

Type: Discrete	Valid cases: 0
Format: numeric	Invalid: 202256
Width: 1	
Decimals: 0	
Range: 0-9	

C34-Number of Hours Worked (Other Occupation) (July 2003 - Jan 2005) (j05_ohrs)

File: LFS April 2007

Overview

Type: Discrete
Format: numeric
Width: 1
Decimals: 0

Valid cases: 0
Invalid: 202256

C35-Basis of Payment (Other Occupation) (July 2003 - Jan 2005) (j06_obis)

File: LFS April 2007

Overview

Type: Discrete
Format: numeric
Width: 1
Decimals: 0
Range: 0-7

Valid cases: 0
Invalid: 202256

C36-Basic Pay per Day (Other Occupation) (July 2003 - Jan 2005) (c36_obic)

File: LFS April 2007

Overview

Type: Discrete
Format: numeric
Width: 1
Decimals: 0

Valid cases: 0
Invalid: 202256

Number of Jobs during the past week (April 2005) (a03_jobs)

File: LFS April 2007

Overview

Type: Discrete
Format: numeric
Width: 1
Decimals: 0
Range: 1-5

Valid cases: 6692
Invalid: 195564

Total Hours Worked for all Jobs (April 2005) (a04_thrs)

File: LFS April 2007

Overview

Type: Continuous
Format: numeric
Width: 3
Decimals: 0
Range: 0-112

Valid cases: 79070
Invalid: 123186
Minimum: 0
Maximum: 112
Mean: 38.9
Standard deviation: 19.5

Reasons for Working More than 48 Hours during the past week (April 2005) (a05_r48h)

File: LFS April 2007

Overview

Type: Discrete	Valid cases: 17492
Format: numeric	Invalid: 184764
Width: 1	
Decimals: 0	
Range: 1-5	

C37-Was Available for Work During the Past Week? (c37_avi)

File: LFS April 2007

Overview

Type: Discrete	Valid cases: 7091
Format: numeric	Invalid: 195165
Width: 1	
Decimals: 0	
Range: 1-2
