Overview

ABSTRACT

Objectives:

The Labor Force Survey (LFS) aims to provide a quantitative framework for the preparation of plans and formulation of policies affecting the labor market.

Specifically, the survey is designed to provide statistics on levels and trends of employment, unemployment and underemployment for the country as a whole, and for each of the administrative regions.

Importance of the Labor Force Survey:

a. It provides a quantitative framework for the preparation of plans and formulation of policies affecting the labor market towards

1) creation and generation of gainful employment and livelihood opportunities

2) reduction of unemployment and promotion of employment

3) improvement of working conditions

4) enhancement of the welfare of a working person

b. It provides statistics on levels and trends of employment and unemployment and underemployment for the country and regions;

c. It is used for the projection of future manpower, which when compared with the future manpower requirements, will help identify employment and training needs;

d. It helps in the assessment of the potential human resource available for economic development; and

e. It identifies the differences in employment, unemployment, and underemployment according to the different economic, social and ethnic groups existing within the population.

Coverage

GEOGRAPHIC COVERAGE

The geographic coverage consists of the country's 16 administrative regions. The 16 regions are:

Region I - Ilocos,

Region II - Cagayan Valley,

Region III - Central Luzon,

Region IV - Southern Tagalog,

Region V - Bicol,

Region VI - Western Visayas,

Region VII - Central Visayas,

Region VIII - Eastern Visayas,

Region IX - Western Mindanao,

Region X - Northern Mindanao,

Region XI - Southern Mindanao,

Region XII - Central Mindanao,

Region XIII - National Capital Region (NCR),

Region XIV - Cordillera Administrative Region (CAR),

Region XV - Autonomous Region in Muslim Mindanao (ARMM)

Region XVI - Caraga,

UNIVERSE

The LFS has as its target population, all household members of the sample housing units nationwide. A household is defined as an aggregate of persons, generally but not necessarily bound by ties of kinship, who live together under the same roof and eat together or share in common the household food. Household membership comprises the head of the household, relatives living with him such as his or her spouse, children, parent, brother or sister, son-in-law or daughter-in-law, grandson or granddaughter, and other relatives. Household membership likewise includes boarders, domestic helpers and non-relatives. A person who lives alone is considered a separate household.

Persons who reside in the institutions are not within the scope of the survey.

Questionnaires

Overview

ISH FORM 2 (LFS questionnaire) is a four-page, forty four-column questionnaire that is being used in the quarterly rounds of the Labor Force Survey nationwide. This questionnaire gathers data on the demographic and economic characteristics of the population.

On the first page of the questionnaire, the particulars about the geographic location, design codes and household auxiliary information of the sample household that is being interviewed are to be recorded. Certifications by the enumerator and his supervisor regarding the manner by which the data are collected are likewise to be made on this page.

The inside pages of the questionnaire contain the items to be determined about each member of the sample household. Columns 2 to 11 are for the demographic characteristics; columns 2 to 7A are to be ascertained of all members of the household regardless of age. Columns 8 to 9 are asked for members 5 years old and over, while column 10 is asked for members 5 to 24 years old, column 11, for 15 years old and over, while columns 12 to 16 are asked for members 5 years old and over. Items 18 to 44 on the other hand, are the series of items that will be asked of all the members 15 years old and over to determine their labor force and employment characteristics.

Most of the questions have pre-coded responses. The possible answers with their corresponding codes are printed at the bottom of the page for easy reference. Only the appropriate codes need to be entered in the cells.

Other items, however, require write-in entries such as column 14 (primary occupation) and column 16 (kind of business/industry), etc. For such items, it is required that the enumerator describes the primary occupation or kind of business/industry.

Supervision

The Regional Directors/Officer-In-Charge (RDs/OICs), Provincial Statistics Officers (PSOs), Regional and Provincial Staff were allotted a number of days to supervise the enumeration.

- 1) The RD/OIC coordinates with the PSOs and provides the general supervision to the staff of the provincial offices under the jurisdiction on all administrative matters and field operations relative to the survey.
- 2) The PSO supervises the activities of the personnel to ensure that the data collection is finished according to the timetable set.
- 3) The Regional and Provincial Statistician supervise in the field and ensure that all items in the questionnaire were asked, and review and edit questionnaires while still in their area of assignment and ensure that all sample households have corresponding questionnaire.

Central Office Statisticians were assigned to provinces to supervise and monitor the conduct of the survey.

Data Processing

Data Editing

Data processing involves two stages: manual processing and machine processing.

Manual processing is done at the provincial offices. This is the general review of the questionnaires. This process includes the folioing of the questionnaires, completeness and consistency checking of the responses, editing and coding of responses. This is done prior to machine processing.

The average output per day is 50 questionnaires.

Other Processing

Data entry, the transformation of information from the questionnaire to machine readable form, is done in the field offices.

Machine processing involved all operations that were done with the use of a computer and/or its accessories, that is, from data encoding to tabulation. Coded data were usually in diskettes or CDs.

Machine editing was preferred to ensure correctness of encoded information. Data entry errors as well as that of the manual processing were identified using a consistency check computer program and were given necessary corrections as per verification of the field offices.

Verification and validation of geographic identification, completeness checking and consistency checking and certification pass are also done at the central office.

CSPro was used in the data entry and tabulations.

Preliminary and final tabulations are done at the Central Office.
