### Overview

---

**ABSTRACT**

The National Labour Force Survey is designed to provide general information on the labour market.

The main Objectives of the ENFT are:

- To follow the evolution of the labour market through the estimation of the main indicators, such as Global Participation Rate, Employment, Child Labour, Unemployment, and Average Wages according to several breakdowns.
- Allow for the development of studies of international comparability of labour statistics of the country with other similar cases.
- To study the relationship between the results of labour market information and the behavior of economic activities that build-up GDP.
- The availability of these statistics to measure the above indicators with appropriate levels of accuracy, became a basic tool for policy makers concerning measures on employment and wages.
