List of background country reports xv

Executive summary xvii

Abbreviations xxvii

Part I – Global synthesis report 1

1. Introduction 3

1.1 The origins of the project 3

1.2 What are "green jobs"? 4

1.3 Hypothesis and methodology 4

1.4 The structure of the report 5

2. Drivers of change: How skill needs shift as economies go green 7

2.1 The changing environment 7

2.2 Policy and regulation 8

2.3 Green technology and innovation 9

2.4 Green markets: Industrial and consumer demand 11

2.5. Conclusions 12

3. Challenge and response: The policy context 15

3.1 Key challenges and priorities for a green economy 15

3.2 The policy response: In pursuit of coherence of environmental and skills policies 29

3.3 Conclusions 53

4. Green structural change and retraining needs 55

4.1 What is green structural change and where is it happening? 55

4.2 Workforce restructuring and adjustment 57

4.3 Employment effects 59

4.4 Sectors most affected by green restructuring 62
4.5 Industries with high employment potential 75
4.6 Retraining and skills upgrading 79
4.7 Effective and equitable restructuring: Good practices by public and private sector actors 82
4.8 Conclusions 92

5. How occupations change as economies go green 95
5.1 Types of change in occupations and their skill requirements 95
5.2 Do "green skills" exist? 103
5.3 Core skills for green occupations 106
5.4 Changing and emerging occupations in major economic sectors 108
5.5 Gender implications 126
5.6 Pathways of skills development: A review of players and practice 127
5.7 Conclusions 141

6. Anticipating and monitoring skill needs 145
6.1 Measuring and classifying green jobs and related skills 145
6.2 Identifying skill needs: Evaluating existing systems and tools 150
6.3 Conclusions 158

7. Key findings and ways forward 161
7.1 Change in skill needs for green jobs is real and requires action 161
7.2 Policy coherence is crucial: How is it to be achieved? 163
7.3 How skills are changing and what works in response strategies 164
7.4 A green and just transition, not just a green transition 166
7.5 From monitoring and anticipating skills change to stimulating green transition 167
7.6 Further research 168

8. Glossary 171

9. References 174

10. Annexes 189
Annex 1. Distribution of the 21 countries included in the study by stage of development 189
Annex 2. Relevant country indicators 191
Annex 3. Template for the country reports 193

Part II – Summaries of country studies 201

Australia 203
Bangladesh 215
Brazil 225
China 237
Costa Rica 249
Denmark 263
Estonia 275
Egypt 287
France 299
Germany 311
India 323
Indonesia 335
Mali 345
Philippines 357
Republic of Korea 367
South Africa 377
Spain 389
Thailand 399
Uganda 409
United Kingdom 421
United States 431

Tables

3.1. Environmental challenges and their socio-economic impact 21
3.2. Overview of some green stimulus packages (information gathered in 2009–10) 49
4.1. Greening the economy: Types of employment effects 61
4.2. "Green" restructuring: industries likely to be adversely affected and associated retraining needs 65
4.3. "Green" restructuring: industries likely to gain and associated retraining needs 75
4.4. Estimated employment potential in renewable energies in selected countries: projected job creation by 2020 76
5.1. Changes in skills and occupations for green jobs 96
5.2. Structure of green industries by qualification in Germany 100

5.3. New green occupations in key sectors of the French economy 102
5.4. Green skills checklist (United Kingdom). 104
5.5. Jobs in renewable energy in the Philippines 116
5.6. Changing and emerging occupations in renewable energy in Indonesia 116
5.7. Skills response at enterprise level. 129
6.1. Institutional frameworks and other mechanisms for identification of current and future skill needs in the countries studied 159

Figures

1.1. Country coverage in the research project "Skills for green jobs" 5
3.1. CO_2 emissions by sector 16
3.2. Frequency of weather-related disasters 20
3.3. The employment status of green jobs vs all jobs in Spain 22
3.4. Green and decent jobs: do skills matter? A schematic overview 22
3.5. Global unemployment trends, 2000–2010 24
3.6. Unemployment rate by level of educational attainment in the EU (2000–2009) 25
3.7. Economically active population, 1980–2020 26
3.8. Projected gaps between supply of and demand for labour, 2020 30
3.9. Coherence between skills and environmental policies 33
3.10. Coherence between environmental and skills policies in correlation with selected indicators 43
3.11. Green stimulus packages ranked by size and proportion 46
3.12. Thematic allocation of green stimulus 47
4.1. Employment change by major economic sector between 1995 and 2008 in selected countries 62
4.2. Composition of employment by major economic sector, 2008 63
5.1. The dynamic of change in skills, occupations and related training needs 101
6.1. Priority occupations for the green economy, South Africa (2008) 155

Boxes

3.1. France's Mobilization Plan for Green Jobs 35
3.2. Devising skills strategies for green jobs in Australia 36
3.3. The Asia green jobs index 41
3.4. The Global Jobs Pact: Key extracts 45
3.5. Large and complex workforce development programmes as a major focus of recovery measures in the United States 52

3.6. Australia's Clean Sustainable Skills Package 53
4.1. Environment versus employment: Thorough policies are needed to address employment of dislocated workers in China 64
4.2. The shift to organic farming 67
4.3. Restructuring in agriculture: moving into biofuel production. 68
4.4. Restructuring in copper mining in the Philippines 70
4.5. Restructuring in oil shale mining in Estonia 71
4.6. Restructuring in the automotive industry: the role of regional institutions 73
4.7. Restructuring in the shipbuilding sector in the UK and Denmark 74
4.8. Retraining existing skilled craft workers as photovoltaic installers in the United States 78
4.9. Improving public transport in Uganda 79
4.10. Jobs created by "Working for Water" through the Expanded Public Works Programme in South Africa. 83
4.11. Green restructuring in Navarre: a successful shift to renewable energies 85
4.12. Aquitaine: a prominent role in restructuring plans for regional authorities. 86
4.13. The US round table on "Strategies for Including People with Disabilities in the Green Jobs Talent Pipeline". 86
4.14. Australia's Construction, Forestry, Mining and Energy Union takes the lead in transition to a low-carbon future 87
4.15. Retraining of sugarcane cutters by the Brazilian Sugarcane Industry Association 89
4.16. The Apollo Alliance's roadmap for revitalizing the US manufacturing sector. 91
4.17. Goodwill Industries International: Tackling barriers to employment 92
5.1. New occupations in the green technology industry in the Republic of Korea. 97
5.2. Taxonomy of green occupations in Australia. 99
5.3. Core skills for natural resource managers in Costa Rica 106
5.4. Leadership skills: the biggest challenge in transition to a low-carbon economy in the UK? 107
5.5. Occupations in the solid waste management sector 111
5.6. Occupations related to water management 112
5.7. Solar energy technicians 114
5.8. Training provision for solar energy technicians. 115
5.9. Green construction jobs in California 119
5.10. Energy auditors and consultants in building 120
5.11. The emerging occupation of eco-designer 122

5.12. Occupations in the carbon finance sector 123
5.13. Skills provision for the carbon finance sector 123
5.14. Store managers in the food retail sector: The case of Jollibee Foods Corporation. 125
5.15. A woman's guide to green jobs in the United States 127
5.16. A public–private partnership: Dhaka's Recycling Training Centre 132
5.17. A skills strategy for the Danish construction sector's value chain. 136
5.18. The Energy Regional Innovation Cluster in the United States. 137
5.19. Eesti Energia AS: an energy company's cooperation with universities in Estonia. 139
5.20. Providing sanitation skills in India: An NGO success story. 141
6.1. Greening occupational descriptions: the O*NET research in the United States 148
6.2. Identification of green occupations by the Observatory of Occupations of the National Public Employment Service in Spain. 149
6.3. Estimating demand for green jobs in the United States 151

Acknowledgements

This report would not have been possible without our partnership with the ILO Job Creation and Enterprise Development Department which contributed to the global research project intellectually, organizationally and financially. We would like to thank Peter Poschen, Kees van der Ree and the Green Jobs his team for their support, insight and fruitful discussions.

Furthermore, the research would not have had the same coverage without the partnership with the European Centre for the Development of Vocational Training (Cedefop) which contributed to the project by conducting research in six European countries. We would like to thank Cedefop Directors Aviana Bulgarelli and Christian Lettmayr, as well as project managers Peter Szovics and Alena Zukersteinova, for excellent cooperation and productive debates.

We are indebted to many colleagues at the ILO for their constructive comments and useful suggestions on the global report, namely Christine Evans-Klock, Peter Poschen, Ana Sánchez, Donna Koeltz, Jon Beaulieu, Laura Brewer, Ana Iturriza, Ivanka Mamic, Annemarie Reerink, Sandra Rothboeck and Denish Samantha. We also owe special gratitude to Marek Harsdorff for his technical input and brilliant ideas on policy coherence.

Likewise, it is a pleasure to thank a number of people from other institutions, who provided very useful comments on the global report, namely Peter Szovics (Cedefop), Cristina Martínez-Fernandez (OECD), Eoin McLoughlin (Comhar – Sustainable Development Council, Ireland), Matthias Thorns (Confederation of German Employers' Associations), Johanna Togola (Mali-Folkecenter Nyetaa), Luis Cruz Caruso (National Service for Industrial Training, Brazil), Misug Jin (Korean Research Institute for Vocational Education and Training), Michael Rafferty (Workplace Research Centre, Univrsity of Sydney, Australia), Arthur Ronald (Consultant, Indonesia), and Farida Zaituni (Consultant, Indonesia).

We would like to express our gratitude to all participants in the technical validation workshop who came from all over the world to the ILO in Geneva on 17–18 May 2010 to provide their thoughtful inputs and useful ideas, which certainly helped to improve the global report.

It is a pleasure to thank all the authors of the background country reports, named individually on page xv. We fully share the authorship of this report with them: without research at national level we would not have been able to produce the global report. Special thanks also go to James Medhurst and Vanessa Foo from GHK Consulting for drafting the European Synthesis Report in cooperation with Cedefop and for contributing their invaluable ideas through several brainstormings and discussions during our joint meetings.

Furthermore, our thanks go to the ILO colleagues who supported preparation and provided comments on background country reports: Mario Hugo Rosal, Sergio Mucuoucah, Luca Azzoni, Amal Mowafy, Vincent Jugault, Keiko Niimi, Raymond Grannall, Carmela Torres, Muce Mochtar, Xubiao Zhang, Marja Paavilainen, Akiko Sakamoto, Arthur Shears, Nurunnabi Khan, Gorm Skjaerlund, and Sandra Rothboeck. Our sincere thanks also go to the ILO field offices that helped to identify national experts and supported the project implementation at national level. We also thank Kristin Lipke, Robert Shepard, Jonathan Njus and other colleagues from the US Department of Labor for their useful suggestions which helped to improve the US background report.
