Description of the event

This side event will discuss the opportunities and challenges involved – and lessons learned – in the operationalisation of the 19th ICLS standards for the measurement of own use provision of services.

The ILO will showcase and demonstrate the new modular light time-use tool developed to support the routine production of accurate, timely, and cost-effective statistics on own use provision of services in low- and middle-income countries.

This is an interactive session and attendees will also have the opportunity to “demo” the new tool!

21st International Conference of Labour Statisticians 11–20 October 2023 - 100 years of ICLS
