- Small is Beautiful Campaign
Key to success: an enabling framework

- Citizens take action if the authorities allow them to
  - map shows where this was the case
  - REScoop.eu advocates for an enabling framework in all EU member states: good practice: Scotland (CARES)
  - Revision of EU directives (Clean Energy for All Europeans) was opportunity
Citizens energy community

a legal entity:

which is based on voluntary and open participation, effectively controlled by shareholders or members who are natural persons, local authorities, including municipalities, or small enterprises and microenterprises.

The primary purpose of a citizens energy community is to provide environmental, economic or social community benefits for its members or the local areas where it operates rather than financial profits.

A citizens energy community can be engaged in electricity generation, distribution and supply, consumption, aggregation, storage or energy efficiency services, generation of renewable electricity, charging services for electric vehicles or provide other energy services to its shareholders or members.

Renewable energy community

a legal entity:

which, in accordance with the applicable national law, is based on open and voluntary participation, is autonomous, and is effectively controlled by shareholders or members that are located in the proximity of the renewable energy projects that are owned and developed by that legal entity;

the shareholders or members of which are natural persons, SMEs or local authorities, including municipalities;

the primary purpose of which is to provide environmental, economic or social community benefits for its shareholders or members or for the local areas where it operates, rather than financial profits.
Transposition Guidance document

What are the right legal forms for energy communities in your country?

How can governments provide financial assistance to energy communities?

How can you ensure coherence between REC & CEC definitions?

Who should make decisions in energy communities?

What activities can energy communities carry out?

Examples from 11+ EU countries
