Research to Action

▶ **Global Research Agenda**

Building the evidence base for informed policy action against child labour, forced labour and human trafficking
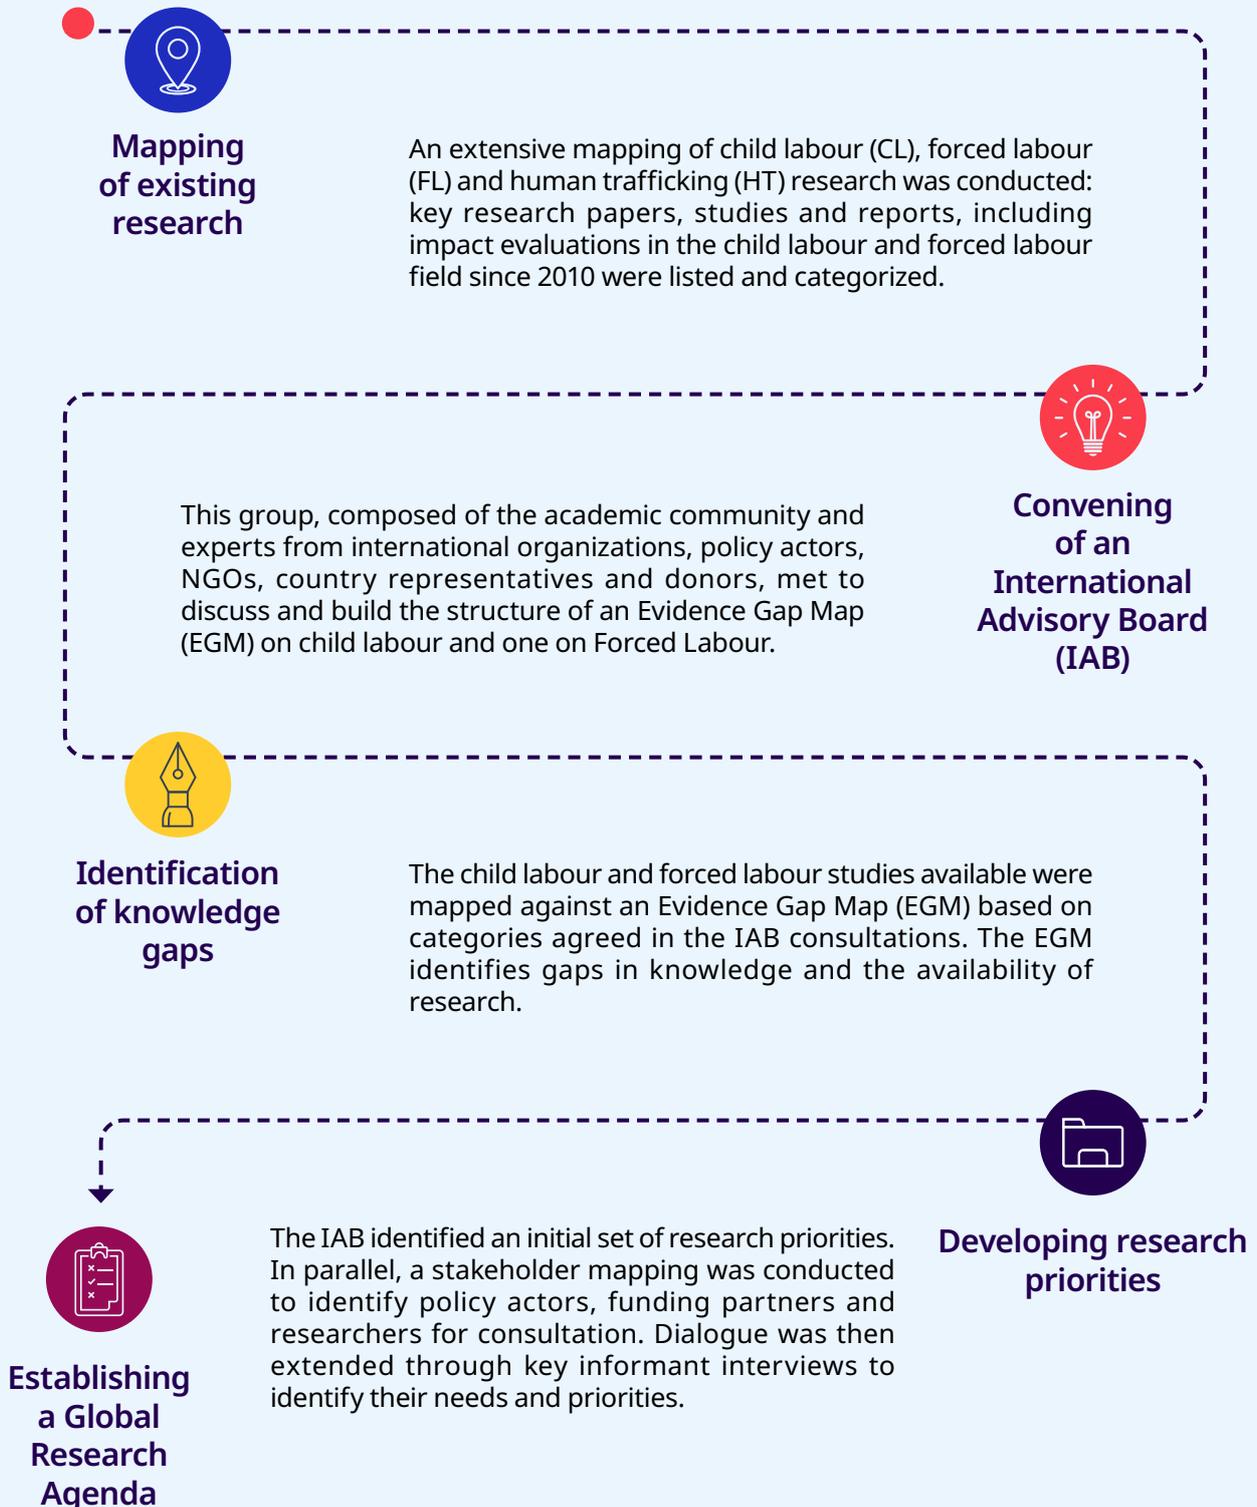

▶ Why do we need a Global Research Agenda?

The latest ILO global estimates of child labour indicate that, despite important progress, there were still 160 million children in labour worldwide in 2020. The ILO global estimates of forced labour show that there was a total of 25 million persons in situations of forced labour in 2016.

The headline figures emerging from the global estimates make clear that a substantial acceleration of progress will be needed to meet commitments to achieve SDG Target 8.7. Moreover, the economic impacts of COVID-19 are placing unprecedented strain on Governments, families and societies, the results of which may stall country efforts to address child labour and forced labour.
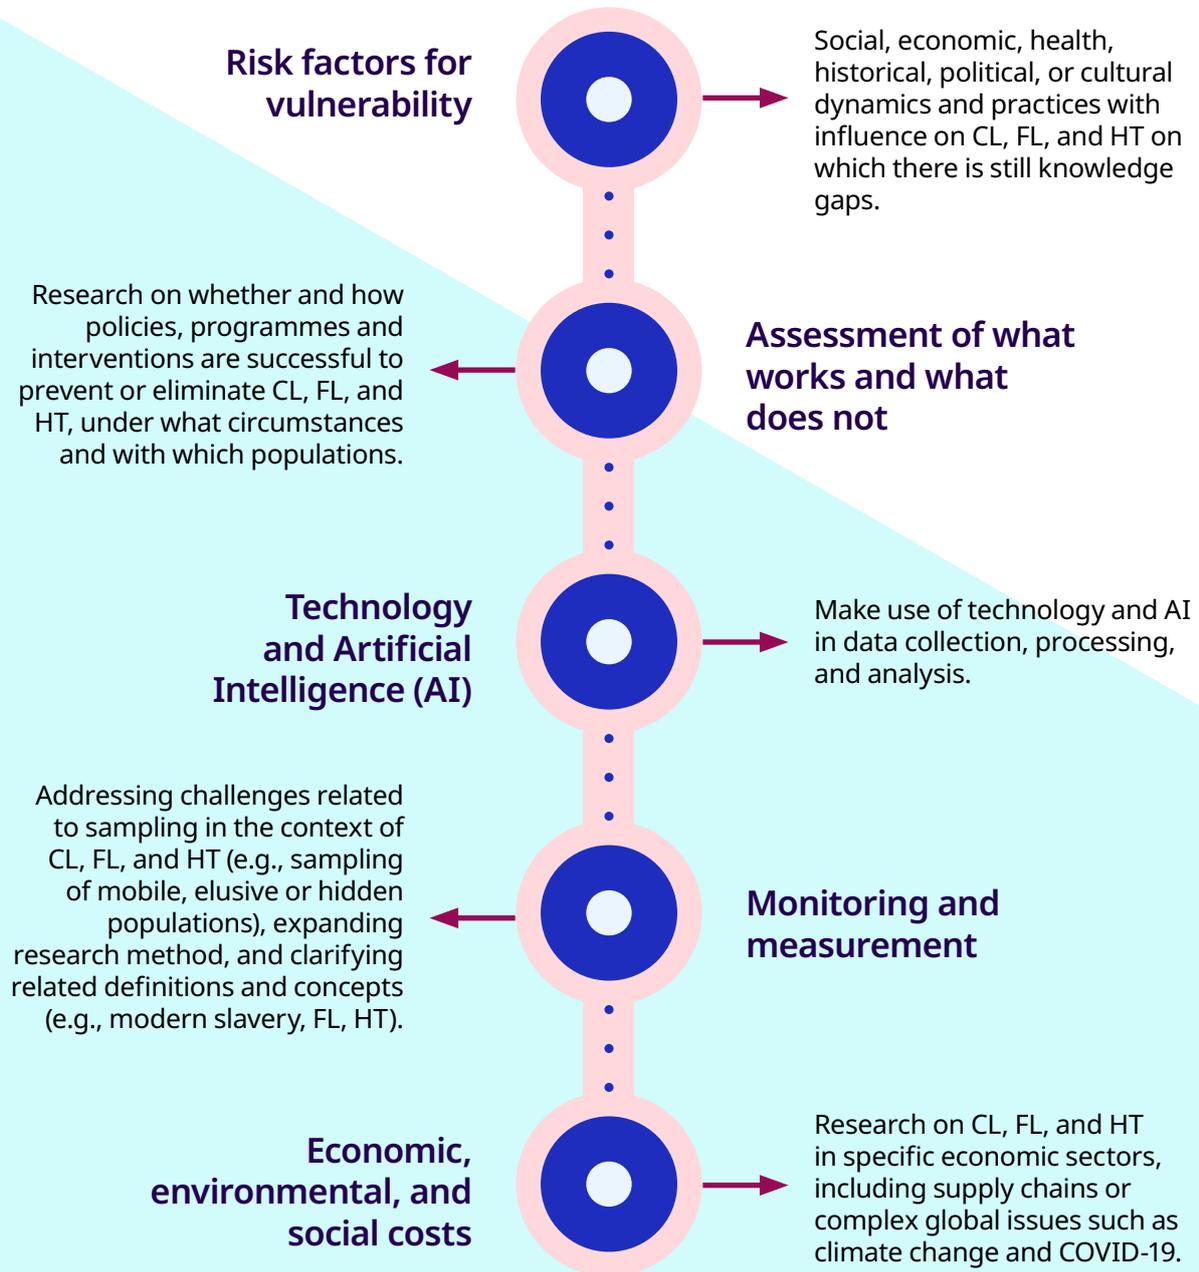

Policy choices will be critical to achieve SDG Target 8.7, and ready access to reliable evidence will be essential to informing these choices. A growing body of evidence, research and impact evaluation has generated a better understanding of the policy mix that should be implemented to achieve real progress in tackling child labour and its root causes. However, significant gaps still exist and hamper policy development.

Resources are limited, and knowledge gaps are wide: the identification of priority areas of research will be essential to support policy efforts to eliminate child labour and forced labour. It was in this light that in 2020 the ILO's project "From Research to Action" (RTA) launched a process towards the development of global and national research agenda. Through this participatory process, involving the academic community and experts from international organizations, policy actors, INGOs, country representatives and donors, the Global Research Agenda was established.

▶ Process

Mapping of existing research

An extensive mapping of child labour (CL), forced labour (FL) and human trafficking (HT) research was conducted: key research papers, studies and reports, including impact evaluations in the child labour and forced labour field since 2010 were listed and categorized.

Convening of an International Advisory Board (IAB)

This group, composed of the academic community and experts from international organizations, policy actors, NGOs, country representatives and donors, met to discuss and build the structure of an Evidence Gap Map (EGM) on child labour and one on Forced Labour.

Identification of knowledge gaps

The child labour and forced labour studies available were mapped against an Evidence Gap Map (EGM) based on categories agreed in the IAB consultations. The EGM identifies gaps in knowledge and the availability of research.

Developing research priorities

Establishing a Global Research Agenda

The IAB identified an initial set of research priorities. In parallel, a stakeholder mapping was conducted to identify policy actors, funding partners and researchers for consultation. Dialogue was then extended through key informant interviews to identify their needs and priorities.

▶ Five Broad Thematic Areas

Risk factors for vulnerability

Social, economic, health, historical, political, or cultural dynamics and practices with influence on CL, FL, and HT on which there is still knowledge gaps.

Research on whether and how policies, programmes and interventions are successful to prevent or eliminate CL, FL, and HT, under what circumstances and with which populations.

Assessment of what works and what does not

Technology and Artificial Intelligence (AI)

Make use of technology and AI in data collection, processing, and analysis.

Addressing challenges related to sampling in the context of CL, FL, and HT (e.g., sampling of mobile, elusive or hidden populations), expanding research method, and clarifying related definitions and concepts (e.g., modern slavery, FL, HT).

Monitoring and measurement

Economic, environmental, and social costs

Research on CL, FL, and HT in specific economic sectors, including supply chains or complex global issues such as climate change and COVID-19.

▶ Main Agenda

Theme	Key topics / dimensions	Related research questions	Related policy / programme response
Risk factors for vulnerability	Migration	What are the vulnerability factors for FL and CL migrants?	• Decent work conditions / related programmes (including targeting of specific services) • Social protection policies
	Informality	How does informality act as a driver for FL?	
	Demographics	How to improve prevalence studies on FL?	
	Child marriage	What is the relationship between child marriage and CL?	
	Ethnicity	What role does race, ethnicity or other minority status play in vulnerability to CL/FL?	
	Gender-focused policies	How can CL policies better address the gender-related vulnerabilities to CL and FL?	
	Physical and Mental Health	What are the long term impacts of children working in (specific) potentially hazardous types of work?	
Assessment of what works and what not	Skill development (early childhood)	What is the effect of early childhood development programmes on CL and schooling?	• Legal commitment • Labour recruitment practices • Education policies • Social protection and livelihood programmes
	Awareness raising and information campaigns	What is the effect of awareness raising campaigns on policy action?	
	Vocational training	What is the role of technical and vocational education and training in small and medium enterprises in reducing CL?	
	Monitoring and law enforcement	How effective are labour inspectorate and other law enforcement services in reducing CL/FL?	
	Survivors of FL and TIP	What strategies are effective at mitigating trauma from these experiences?	
	Social protection and livelihood programmes	What kind of programmes are (the most) sustainable and effective at preventing child and families from CL and FL? What aspects of social protection and livelihood programmes (e.g., cash transfers, credit, parental work) affect CL/FL and how?	
Technology and AI	Ethical data collection	What is the impact of technology and AI in data collection in a given context?	• Identification and referral mechanisms • Community monitoring systems
Monitoring and Measurement	Sampling	How can be the range of sampling methods be improved in FL research?	
	Methods	How can different research methods address the interlinkages between CL and FL? How can research better involve and benefit local communities?	
	Definitions and concepts (e.g., modern slavery, FL, HT)	How to compare findings and data collection procedures given different definitions and concepts?	
Economic, environmental, and social costs	Climate change	How does climate change influence the risk of child labour and forced labour? How does climate change modify the vulnerability factors of CL and FL?	• Labour recruitment • Due diligence • Freedom of association and collective bargaining
	Supply chains	What is the role of global supply chains on CL and/or FL (taking into account broader economic structures and especially third party goods/suppliers)?	
	Specific economic sectors	What is the influence of governance mechanisms on specific sectors?	
	COVID-19	How has COVID 19 impacted the determinants of CL and FL? How has COVID 19 impacted the push/pull factors leading to CL and FL?	

▶ National Research Agendas

Pathfinder countries with strong interest in building the evidence base needed to set and fulfill policy action priorities may request support from the RTA project to establish a national research agenda. The process is modeled after the qualitative and quantitative research curation and multistakeholder inputs that were conducted for the Global Research Agenda.

National Research Agendas were established or are under development in:

- ▶ Chile
- ▶ Malawi
- ▶ Nepal
- ▶ Paraguay
- ▶ Uganda

Do you want a National Research Agenda in your country?

# ▶ Global Call to Action

Collaborate

Innovate

Accelerate

The Global Research Agenda offers opportunities to all stakeholders to initiate and support research addressing the identified priority areas.

To this end, all stakeholders will contribute to deepening the understanding of the root causes of child labour, forced labour, and human trafficking and inform the policies needed to get back on the path toward achieving SDG target 8.7.

Within each thematic area, the authors have deliberately posed only a few core research questions with the objective of encouraging researchers, including junior researchers, to build on to address evidence gaps. The openness also allows flexibility for practitioners and researchers to fine tune research questions to meet specific priorities and needs in their fields of specialization.

The authors and contributors of this agenda invite and encourage new collaborations and innovative approaches to implement the Global Research Agenda. We also count on further financial and technical commitments to translating research into policy action and solutions to sustainable development.

▶ The Research to Action (RTA) project

Using Knowledge to Accelerate Progress in the Elimination of Child Labour and Forced Labour

The RTA project centers on bridging the divide between policy research and policy action to tackle issues of forced labour, child labour and human trafficking. The primary objectives of the project are to increase access to evidence, facilitate understanding of available research and gaps, enhance capacity to provide evidence and fill gaps and promote new interest and engagement in the subject area. The RTA project is funded by the United States Department of Labor (USDOL).

▶ Acknowledgements

The RTA project thanks the International Advisory Board (IAB) for their valuable guidance through multiple consultation workshops. The IAB consists of technical experts from the ILO, international organizations, workers' and employers' organizations, USDOL, Alliance 8.7 Pathfinder countries, national statistical offices, INGOs and the research community.
