Ending child labour by 2025:
A review of policies and programmes
Envisioning a World Without Child Labour

The problem remains large...
The latest Global Estimates indicate that **152 million children** — 64 million girls and 88 million boys — are in child labour globally, accounting for almost **one in 10 of all children worldwide**.

...and progress is slowing.
While the number of children in child labour has **declined by 94 million** since 2000, the rate of reduction **slowed by two-thirds** in the most recent four-year period.

Renewing the commitment

*Target 8.7 of the UN Sustainable Development Goals calls for an end to child labour in all its forms by 2025.*

Yet simply maintaining the current rate of progress would leave **121 million children still engaged in child labour** by this critical target date.

How can the world community get firmly on track toward eliminating child labour?

This report points the way with policy approaches and responses.

1. Advancing the **legal commitment to child labour elimination** and the central role of **social dialogue**

2. Promoting **decent work** for adults and youth of legal working age, especially through addressing informality

3. Building and extending **social protection** systems, including floors, to mitigate the economic vulnerability of households

4. Expanding access to free, quality public **education** as the logical alternative to child labour

5. Addressing child labour in **supply chains**

6. Protecting children in situations of **fragility and crisis**

Ending child labour by 2025: A review of policies and programmes

The international community has made clear that the persistence of child labour in today’s world is unacceptable and, in the Sustainable Development Goals, has renewed its commitment to eliminating all forms of child labour by 2025. This report aims to contribute to such efforts by offering an analysis of trends and an evidence-based discussion of policy solutions.

As we show, available evidence suggests that investment in expanding free education of good quality, extending social safety nets, improving the governance of labour markets and the functioning of family enterprises, and strengthening social dialogue and legal protections hold a great deal of promise for eliminating child labour and offer the key elements of an underpinning strategy for efforts from today until 2025.

Executive Summary
Child labour in the world today

The challenge of ending child labour worldwide remains formidable.

The latest Global Estimates indicate that 152 million children — 64 million girls and 88 million boys — are in child labour globally, accounting for almost one in 10 of all children worldwide. Nearly half of all those in child labour — 73 million children in absolute terms — are in hazardous work that directly endangers their health, safety, and moral development. Children in forced labour, a worst form of child labour that is estimated using a separate methodology, number 4.3 million.

There are more than 150 million children in child labour in the world, half of whom are in hazardous work.

71%
work in the agricultural sector

69%
perform unpaid work within their own family unit

Absolute number of children in employment, child labour and hazardous work
The 2016 results show that child labour has again declined worldwide, but that the pace of progress has slowed significantly.

The share of children in child labour fell by only one percentage point during 2012 to 2016, compared to three percentage points in the previous four-year period. The decline in hazardous work slowed in a similar fashion. Beyond this general slowdown in progress, the 2016 results highlight a number of specific areas of concern. Child labour increased in Africa despite the fact that many African countries have taken strong action to combat it. A closer look at the patterns during 2012 to 2016 also indicates almost no progress among children under the age of 12.

We must move much faster if we are to honour our commitment to ending child labour in all its forms by 2025.

A simple projection of future progress based on the pace of progress achieved during 2012 to 2016 indicates very clearly the challenge ahead. As reported in the figure at lower left, maintaining the current rate of progress would leave 121 million children still engaged in child labour in 2025. A similar calculation, also shown in the figure, indicates that even maintaining the pace achieved during 2008 to 2012, the fastest recorded to date, would not be nearly enough. We are moving in the right direction, but we must greatly accelerate the pace.
Policy prescriptions for a world free of child labour

How do we get from where we are now to where we want to be by the SDG target date of 2025? Thanks to a growing body of practical experience, research and impact evaluations, we know progress relies centrally on an active government policy response — supported by workers’ and employers’ organizations and the wider international community — that addresses the array of factors that push or pull children into child labour. Progress does not, in other words, happen by itself, nor does it depend only on forces beyond the realm of policy. While economic growth is relevant, the accumulated evidence and experience suggest that policy choices and accompanying resource allocation decisions can matter even more.

We also know a lot about which policies are most relevant. The evidence suggests that policies in four principal areas stand out in this regard — education, social protection, labour markets, and legal standards and regulation — all underpinned by social dialogue that ensures their relevance. These policy areas are linked not only to the SDGs concerning poverty eradication, quality education, and decent work, but also to the foundational objective of the 2030 Agenda to achieve “peaceful, just and inclusive societies”.

But the consensus around a common set of policy priorities does not mean that there exists a one-size-fits-all approach to addressing child labour everywhere. Policy responses need to be tailored to the variety of contexts in which child labour persists and they should be built on the “policy blocks” already in place. Two contexts that present special challenges — global supply chains and state fragility and crisis — are discussed separately below.
The Rationale

Schooling and child labour are inextricably linked. In the words of Nobel Peace Laureate Kailash Satyarthi, “We will not end child labour until every child is in school, and we will not succeed in ensuring every child is in school until we eradicate child labour”. There is broad consensus that the single most effective way to stem the flow of school-aged children into child labour is to improve access to and quality of schooling, so that families have the opportunity to invest in their children’s education and the returns to such an investment are greater than those associated with involving children in work. Universal quality education promotes all children’s rights and helps break intergenerational cycles of poverty and reliance on child labour.

Approaches

Invest in Early Childhood Development, Care, and Pre-Primary Education Programmes

Getting children off to a good start is one of the most important strategies for ensuring that children transition successfully from early childhood to school rather than to the workplace. Evidence shows that these programmes play a vital role in promoting learning readiness and in sensitizing parents to the importance of school participation, which in turn helps to ensure that children enter, persist, and succeed in school, at least up to the minimum age for employment.

Reducing or Eliminating School Costs

Schooling must be affordable in order to be a viable alternative to child labour. Yet in many cases a lack of public educational facilities can mean a reliance on costly private providers that are beyond the means of many of the poorest, while, in others, fees to attend schools or the cost of necessary items such as textbooks and uniforms can keep children out of the classroom.

Improved School Access

There is a large body of evidence linking limited school access with child labour and the impact appears especially strong for girls. Studies also suggest that even when school access constraints are limited to higher levels of schooling, they can be part of the reason why primary-aged children work rather than attend school. Parents may be less willing to send their children to primary school knowing that they will be unable to proceed to higher levels, where the seed of the initial investment in education bears greater fruit.

School Quality and Relevance

Quality concerns can also play a role in pushing children out of school and into child labour. Out-of-school children surveyed in a number of countries cite lack of interest in school as an important motive, a response likely driven in important part by negative perceptions of school quality and relevance. Parents too frequently cite a lack of perceived relevance in their decisions to send their children to work prematurely instead of continuing to invest in their education.
SOCIAL PROTECTION SYSTEMS, INCLUDING SOCIAL PROTECTION FLOORS

RATIONALE

In the absence of other coping mechanisms, exposure to poverty and shocks can force households to resort to child labour as a fall-back survival strategy. Continued progress against child labour will require policies that help mitigate the economic vulnerability of households. A growing body of research and experience points to the relevance of social protection systems, including social protection floors, in this regard. Social protection measures providing income replacement and security to families that are dependent for part of their family income on the labour of their children have proved successful and must be extended.

APPROACHES

CASH TRANSFER PROGRAMMES

Programmes providing cash stipends to vulnerable families with children, sometimes conditional on school attendance or participation in preventive health programmes, are becoming an increasingly important part of social protection floors in a number of countries. There is extensive evidence that these programmes lower both the prevalence and time intensity of child labour, principally by compensating families for children’s time in the classroom and by helping families to weather unforeseen shocks without resorting to child labour.
PUBLIC WORKS PROGRAMMES

Evidence to date suggests that public works programmes providing temporary employment to adult members in poor households can lead to children having to replace adults in household work while the latter are participating in the programme, thus offsetting any positive programme effects arising from the increase in family income. Child labour considerations therefore need to be incorporated into the design of these programmes to ensure that they do not have adverse effects on children. Providing child care facilities at worksites to alleviate the burden on older children to care for their younger siblings is one example of this.

OTHER SOCIAL PROTECTION INSTRUMENTS

The limited evidence available to date suggests that health protection, social protection for persons with disabilities, income security in old age, and unemployment protection are all also of relevance to efforts against child labour. The other main types of social security benefits identified in ILO Social Security (Minimum Standards) Convention, 1952 (No. 102), while also potentially important, have not yet been evaluated from a child labour perspective.

<tr>
<td></td>
<td>Introducing or expanding conditional cash transfer schemes, to help alleviate current income poverty (through cash benefits) as well as reduce children's time available for work (through conditionality based on children's school attendance).</td>
</tr>
<tr>
<td></td>
<td>Introducing or expanding in-kind transfer schemes, including food for education schemes, in order to help reduce household food insecurity and provide an additional incentive for school attendance; school meals can also improve student concentration and performance, meaning greater benefit from classroom time.</td>
</tr>
<tr>
<td><strong>Mitigate the impact of other contingencies leading to a reliance on child labour</strong></td>
<td>Extending health protection to address the social distress and economic loss associated with ill health.</td>
</tr>
<tr>
<td></td>
<td>Extending social protection for persons with disabilities to address household social and economic vulnerabilities associated with disabilities, including through contributory and non-contributory disability benefits, wage replacement for disabling injuries and illnesses, and provision of social care services for people with disabilities or who suffer long-term illness.</td>
</tr>
<tr>
<td></td>
<td>Ensuring income security in old age through pension schemes or similar measures, to help offset the social vulnerabilities associated with ageing and help provide income security in multi-generational households.</td>
</tr>
<tr>
<td></td>
<td>Extending unemployment protection, in order to secure the income needs of households buffeted by loss of work.</td>
</tr>
<tr>
<td><strong>Complementary social finance schemes</strong></td>
<td>Introducing micro-credit and micro-insurance schemes for vulnerable families to facilitate their access to the financial market and enable them to hedge against part of the risks they face.</td>
</tr>
</tbody>
</table>

Notes: (a) Complementary social finance schemes are not technically part of social protection systems.
DECENT WORK FOR ADULTS AND YOUTH OF LEGAL WORKING AGE

RATIONALE
Decent, secure, and properly remunerated work for adults and youth of working age remains the cornerstone of combating family and community poverty, and child labour is most prevalent where adults and youth of working age cannot access their rights to decent work and where social protection fails to fill the poverty gap created by that absence of decent work. Decent work also implies the empowerment of working people, strong labour relations, and effective freedom of association, which in turn are inimical to child labour. Greater opportunities for decent work in the labour market often mean greater potential returns to education, and in such circumstances evidence suggests that families are more likely to postpone their children's involvement in work and invest instead in their education.

APPROACHES

IMPROVING RURAL LIVELIHOODS AND INCOMES
Most children in child labour are unpaid family workers in family farms and enterprises. These families often depend on the additional income that their children's work generates, or the family enterprise depends on their work to be able to function. These basic facts underscore the importance of improving rural livelihoods and incomes, and the operation of small family farms and enterprises, reducing family dependence on child labour. Family enterprises need fair prices for what they produce, and those that are “functionally dependent” on the work of their children need to become viable enough to replace the unpaid work of their children.

ADDRESSING INFORMALITY
The informal economy exposes working people to the risk of denial of their rights at work, including of the right to organize and bargain collectively. It also exposes them to a lack of occupational safety and health assurances and to inadequate social protection. All of these undermine access to decent work and increase the likelihood that working households must rely on children's labour as a negative coping strategy. Labour market policies promoting the transition from the informal to the formal economy — which often overlap with efforts to improve rural livelihoods — are therefore also critical in the fight against child labour.

PROMOTING OPPORTUNITIES FOR YOUTH OF LEGAL WORKING AGE TO ACCESS DECENT WORK
Success early in working life is linked to better long-term career prospects and can move young people into situations of self-sufficiency, help them exit from poverty, and help them and their families break the cycle of child labour. Youth employment efforts should be framed within a broader emphasis on ensuring young people's rights at work in order that they receive equal treatment, are free to organize, and are protected from abuse and exposure to hazards. They should not overlook the group of children of legal working age in hazardous work.
## Policies to promote decent work for adults and youth of legal working age

### LEGAL COMMITMENT TO CHILD LABOUR ELIMINATION

#### RATIONALE

Legislation alone cannot eradicate child labour. However, it is equally impossible to eliminate child labour without effective legislation. A solid legislative framework offers many contributions to efforts against child labour: it translates the aims and principles of international standards into national law; it articulates and formalizes the State’s duty to protect its children; it sets forth specific rights and responsibilities; it provides sanctions for violators; and it provides legal redress for victims. Almost all children in the world are now covered by ILO Convention No. 182 and coverage of Convention No. 138 stands at 80 per cent. But ratification by member States of the ILO’s two child labour Conventions is not by itself sufficient to eliminate child labour. Much more has to be done to turn the commitment of eliminating child labour into reality.
APPROACHES

TRANSPOSING RATIFIED INTERNATIONAL STANDARDS INTO NATIONAL LAWS AND PRACTICE

As one example of the challenges that remain, recent research has highlighted important incoherencies between laws governing the minimum age for admission to employment and those dealing with the age of completion of compulsory schooling. Currently, out of 170 ILO member States that have ratified ILO Convention No. 138, 44 set an age for the completion of compulsory education that is higher than the minimum age for admission to employment they specified upon ratification. Many countries are also lagging behind the commitment they made upon ratification of ILO Conventions Nos 138 and 182 to publish or review national lists of hazardous work prohibited to children under 18 years of age.

MONITORING AND ENFORCEMENT OF CHILD LABOUR LAWS

An adequate legal framework must be accompanied by sufficient institutional capacity to monitor and enforce it. Labour inspection systems remain generally weak, owing to both capacity and resource constraints. Moreover, even where inspection systems are in place, they rarely reach workplaces in the informal economy where most child labour is found.

SAFEGUARDING OTHER FUNDAMENTAL LABOUR RIGHTS

It is critical that the legal architecture extends to other fundamental labour rights such as freedom of association and the effective recognition of the right to collective bargaining, and freedom from discrimination and from forced labour, as we know that the persistence of child labour and violations of other fundamental labour rights are closely related. More progress is also needed in integrating the application of child labour laws with those protecting other fundamental labour rights, in keeping with the 1998 ILO Declaration on Fundamental Principles and Rights at Work, and the 2008 Declaration on Social Justice for a Fair Globalization, and as reflected in the 2030 Agenda for Sustainable Development.

ADDRESSING CHILD LABOUR IN SUPPLY CHAINS

RATIONALE
While global supply chains can be an “engine of development,” failures of governance at all levels within global supply chains have contributed to decent work deficits, and the presence of child labour in some global supply chains is acute in their lower segments. Research on child labour has been conducted in a number of supply chains such as cocoa and tobacco, at times following media reports exposing child labour in supply chains. However, to date it has not been the subject of systematic, quantitative research covering all major affected supply chains. While reliable numbers are therefore difficult to come by, it is safe to say that the issue of child labour in supply chains extends to most sectors and most regions of the world, although it is also true that child labour in the production of goods for family and local consumption represents the majority of child labour in the world.

APPROACHES

AREA-BASED APPROACHES
Rather than focus specifically on supply chains, area-based approaches address factors driving all types of child labour in a given geographic area. This broader approach helps prevent children simply moving from one supply chain to another, or into a more hidden form of child labour, or, if they are below the minimum age for work, from moving from hazardous to non-hazardous child labour. There is a growing number of industries and enterprises adopting area-based approaches; such approaches have also been deployed outside the enterprise realm under names such as “child-friendly villages” in Africa and South Asia.

ESTABLISHMENT AND ENFORCEMENT OF AN ADEQUATE REGULATORY FRAMEWORK
An adequate regulatory framework is critical to the creation of an enabling environment for addressing child labour in supply chains and, more broadly, to ensuring sustainable supply chains. Such a framework should set out clearly the expectation that all business enterprises domiciled in the national territory or jurisdiction respect human rights throughout their operations. Labour inspection services everywhere still need greater resources — and in some cases, capacity — to fulfil their essential role of transposing the authority and obligations of the State into practical measures to ensure the prevention of child labour and the enforcement of a regulatory framework.

PROMOTING INDUSTRY COMPLIANCE
Translating the relevant international frameworks and national regulations into concrete progress against child labour in global supply chains will require continued support to the efforts of enterprises and others to ensure compliance. A number of interventions have emerged in recent years in this context. Business-led, voluntary initiatives focused on child labour in supply chains help ensure a level playing field in which compliance is not a source of competitive advantage. Cross-sectoral collaboration initiatives between industries take such collaboration a step further to seek to ensure that when child labour is tackled in one supply chain it is not simply displaced into another. Global framework agreements between multinational enterprises and sectoral global trade union federations have the critical added value of being the outcome of social dialogue and reflect the integrated deployment of all fundamental rights at work to combat both the symptoms and the root causes of child labour.

Public-private partnerships help promote more effective interaction between private compliance initiatives and public enforcement activities; too often these efforts are disconnected, resulting in fragmentation and inefficiency. The issue of child labour in global supply chains concerns a variety of parties — government, industry, international buyers, employers’ and workers’ organizations, and civil society — and bringing these parties together through multi-stakeholder engagement initiatives to identify and coordinate actions can help ensure their ultimate effectiveness and sustainability.
Executive Summary

PROTECTING CHILDREN IN SITUATIONS OF FRAGILITY AND CRISIS

RATIONALE

Armed conflicts and natural and climate-change related disasters during the 2012-2016 period have dislocated economies, communities, and livelihoods, creating the greatest flows of refugees — including children — seen for decades. Some 535 million children (almost one in four children in the world) live in countries affected by conflict or disaster, while children comprise more than half of the 65 million people presently displaced by war. Whether children affected by conflict and disaster are trapped in their home communities or on the move in search of safety and refuge, they are more vulnerable to child labour.

APPROACHES

MAINSTREAMING CHILD LABOUR CONCERNS INTO HUMANITARIAN ACTION

Child labour concerns must be prioritised and integrated into all phases of humanitarian action — in crisis preparedness and contingency plans, humanitarian responses, peace processes and demobilization efforts, and in post-crisis reconstruction and recovery efforts. Humanitarian responses addressing child labour should, to the greatest extent possible, engage public authorities and build upon existing national systems. Collaboration among development and humanitarian actors in addressing child labour needs to be made more effective and rapid in emergencies, so that short-term emergency measures are consistent with, and help support, longer-term efforts to combat child labour.

ADDRESSING WORST FORMS OF CHILD LABOUR SUFFERED IN SITUATIONS OF ARMED CONFLICT

Some of the most egregious violations of children’s rights occur in contexts of armed conflict. Children can be recruited as combatants, used as human shields, sexual slaves, and suicide bombers, or be forced to commit acts of extreme violence. In addition, children in conflict zones may be forced to perform extremely hazardous child labour in the production of conflict minerals. More attention is urgently needed to these worst forms of child labour suffered in situations of armed conflict.

ACCESS TO LIVELIHOODS

The sudden loss of livelihoods and heavy economic burdens faced by families in crisis situations can make them extremely vulnerable and lead to child labour as a negative coping mechanism. This is particularly the case with the growing global population of forcibly displaced persons, which now exceeds 65 million. The sooner affected populations are provided with access to livelihoods the more effectively child labour can be prevented and addressed.

| Policies to protect children from child labour in situations of state fragility and crisis |
|-----------------------------------------------|-----------------------------------------------|
| **Policy goals** | **Policy provisions** |
| **Mainstreaming child labour concerns in all phases of humanitarian action** | Prioritising child labour in crisis preparedness and contingency plans, humanitarian responses, and in post-crisis reconstruction and recovery efforts. |
| | Development and updating of rapid assessment tools to quickly determine the risks of child labour and other fundamental labour rights violations in crisis situations. |
| | Development and testing of intervention models to address child labour in crisis or in fragile situations. |
| **Children in armed conflict** | Ensuring that child soldiers and other children caught up in armed conflict are prioritized in peace plans and processes and in demobilization efforts. |
| | Continuing special advocacy efforts directed towards armed groups aimed at the release of these children. |
| | Providing sustainable work opportunities for young people of legal working age formerly associated with armed forces and armed groups. |
| | Providing psychosocial counselling and other interventions to address anti-social behaviour and post-traumatic stress among children and young people formerly associated with armed forces and armed groups. |
| **Improved access to livelihoods to reduce reliance on child labour as a negative coping strategy** | Development of public employment measures and income-generation opportunities for affected population groups and individuals. |
| | Addressing the legal and regulatory impediments facing refugees in accessing the labour market and gaining decent work in host communities. |
| | Building the resilience and strengthen the capacity of host communities by investing in local economies and promoting full, productive, freely chosen employment and decent work, and skills development of the local population. |
| **Build humanitarian responses on national systems** | Engage public authorities and build to the extent possible upon existing national systems to avoid the creation of parallel systems. |
| | Seek agreement from national authorities to accommodate refugees or internally-displaced groups of children within national systems within the limits of national resources and capacity and with acknowledgement on the part of the international community of the importance of equitable sharing of burdens and responsibilities. |
| **Strengthened coordination and collective action** | Promote clear delineation of roles and mandates so that each humanitarian actor addresses elements of the response for which it is most competent. |
| | Promote improved coordination among development and humanitarian actors in order that short-term emergency measures are consistent with, and help support, longer term efforts to combat child labour. |
The road forward to 2025

An emerging consensus to address child labour through an integrated and rights-based approach

The extensive body of knowledge and experience reviewed in this report underscores the importance of an active policy response to child labour and sheds important light on its contents. Measures in four main policy areas — education, social protection, labour markets, legal standards and regulation — emerge from the review as especially important pillars of a policy response to child labour.

The rationale for these four pillars is straightforward: international standards and national labour laws and regulations define and formalize the State’s duty to protect children. Well-designed labour market policies focused on where most child labour persists — in the rural economy and the informal economy — can help curb the demand for child labour and promote decent work for youth of legal working age and adults. Social protection helps prevent households from having to rely on child labour as a negative coping strategy in the face of poverty and economic insecurity. Universal quality education promotes all children’s rights and helps break intergenerational cycles of poverty and reliance on child labour.

This emerging policy consensus reflects a recognition that child labour cannot be eradicated in isolation, with a narrow sectoral or product focus, or through limited project interventions. Rather, accumulated evidence and experience underscores the importance of a wider focus on systemic change and the eradication of root causes, through the integration of child labour concerns into coherent, integrated economic and social development policies.

An implicit recognition of the limits of enforcement also underlies this consensus. With most of the 152 million children in child labour performing unpaid contributing work in their own families, enforcement must be directed appropriately and not victimize children or parents and families who are themselves victims of poverty, inequality and social exclusion.

Policy responses to child labour are most effective when underpinned by social dialogue, which in turn requires the realization of freedom of association and the effective recognition of the right to collective bargaining. The exercise of those rights and well-functioning social dialogue means not only that people and communities affected by child labour can use their collective, representative voice to exercise influence over public policy and ensure its relevance to their needs, but also, in the words of the 1998 ILO Declaration, that people can “claim a fair share of the wealth they have helped to create”.

Partnerships and international development cooperation remain critical to achieving the eradication of child labour. In this context, Alliance 8.7 — a global partnership to end forced labour, modern slavery, human trafficking, and all forms of child labour in accordance with SDG Target 8.7 — was launched in 2016 as a vehicle to promote active collaboration and leverage expertise across a wide range of like-minded stakeholders.

In many countries, the cost of required action far exceeds available government resources, and governments will not be able to achieve child labour targets if they are left to act unassisted. International development cooperation is therefore imperative within the spirit of Article 8 of ILO Convention No. 182. UN agencies, other multilateral and bilateral organizations, international non-governmental organizations, and a variety of other groups all have an important role to play.

The human and economic returns on the investment in ending child labour are incalculable. Children who are free from the burden of child labour are able to fully realize their rights to education, leisure, and healthy development, in turn providing the essential foundation for broader social and economic development, poverty eradication, human rights — and human wellbeing.
The message that we must act now to stop child labour once and for all has been affirmed by the Sustainable Development Goals. Acting together, it is within our means to make the future of work a future without child labour.”

Guy Ryder, ILO Director-General
Part 1. Child labour and the Sustainable Development Goals
Global child labour estimates

The latest Global Estimates indicate that 152 million children — 64 million girls and 88 million boys — are in child labour globally, accounting for almost one in ten of all children worldwide. Seventy-one per cent of children in child labour work in the agricultural sector and 69 per cent perform unpaid work within their own family unit. Nearly half of all those in child labour — 73 million children in absolute terms — are in hazardous work that directly endangers their health, safety, and moral development. Children in employment, a broader measure comprising both child labour and employment of children above the legal working age, number 218 million. Children in forced labour, a worst form of child labour that is estimated using a separate methodology, number 4.3 million.¹

There are more than 150 million children in child labour in the world, half of whom are in hazardous work.

![Figure 1: Absolute number of children in employment, child labour and hazardous work](image-url)
Part 1. Child labour and the Sustainable Development Goals

Children in forced labour

4.3 million children in forced labour.

1 million of them in commercial sexual exploitation.

3 million of them in other forced labour imposed by private actors.

300,000 children in state-imposed forced labour.

Forced labour of children is defined as work performed by a child under coercion applied by a third party (other than his or her parents) either to the child or to the child’s parents, or work performed by a child as a direct consequence of his or her parent or parents being engaged in forced labour. The coercion may take place during the child’s recruitment to force the child or his or her parents to accept the job. It may also occur once the child is working, to force him or her to do tasks that were not part of what was agreed to at the time of recruitment, or to prevent him or her from leaving the work.

Forced labour for the purposes of the ILO’s Worst Forms of Child Labour Convention, 1999 (No. 182) constitutes a worst form of child labour. According to the 2016 Global Estimates of Forced Labour, 2 children in forced labour number 4.3 million, of whom 1 million are children in commercial sexual exploitation, 3 million are children in forced labour for other forms of labour exploitation, and 300,000 are children in forced labour imposed by state authorities. These figures do not constitute a significant change from those published four years earlier.

The estimates of child victims of forced labour, however, should be interpreted with caution, as the unique circumstances in which forced labour is exacted, and its often hidden and illicit nature, makes it very difficult to measure. The elements of involuntariness and coercion in the context of children’s work are particularly difficult to capture through surveys, unless they are specifically designed to investigate the phenomenon of forced labour among children.

Forced child labour, in which the children suffer both the impact of child labour and the trauma of coercion, threats of penalty, and lack of freedom, requires urgent action from governments and the international community. The development of specific survey tools to improve understanding of the scope and nature of forced labour among children will be critical to guiding action.

While the challenge is still great, the evidence shows promising movement in the right direction. The Global Estimates for 2016 show that child labour has again declined worldwide, continuing a trend seen since the publication of the ILO’s first Global Estimates of Child Labour in 2000. 3 The 16-year period starting in 2000 saw a net reduction of 94 million in children in child labour. The number of children in hazardous work fell by more than half during the same period. There were almost 134 million fewer children in employment in 2016 than in 2000. Real advances have been made in the fight against child labour, providing an important foundation for efforts moving forward.
But a narrower focus on the most recent four-year period indicates a significant slowing of progress. The reduction in the number of children in child labour amounted to 16 million for the 2012 to 2016 period, just one-third of the 47 million reduction recorded from 2008 to 2012. Expressed in relative terms, the share of children in child labour fell by only one percentage point during 2012 to 2016 compared to three percentage points in the previous four-year period. The decline in hazardous work slowed in a similar fashion. The rapid pace of progress recorded from 2008 to 2012 had raised hopes of a gathering and comprehensive momentum in the fight against child labour, bringing us closer to the target set by the ILO’s constituents of eliminating the worst forms of child labour by 2016. We now know that we have fallen well short of the 2016 target.

Beyond the general slowdown in progress, the 2016 results highlight other specific areas of concern, particularly the limited progress among children under the age of 12. The decline during 2012-2016 touched only a half million children in this group. The Global Estimates also show that child labour and educational marginalization are closely related, underscoring the importance of investment in education and related policies to help prevent the youngest children from entering child labour. While there is much attention to school to work transition, we are still achieving too little success in ensuring successful transition from early childhood to school. Getting children off to a good start through appropriate early childhood development, care, and pre-primary education is especially important in this regard. It is a first step on which the success of following steps depends.

Gender differences in recent progress are another concern. The decline in child labour among girls was only half that of boys during the period from 2012 to 2016 and the gender gap in child labour involvement has therefore narrowed. The 2016 Global Estimates break new ground in providing, for the first time, estimates of children’s involvement in household chores in their own homes. The results, which show that girls shoulder disproportionate responsibility for household chores, also raise important gender concerns that merit consideration in child labour policies.
Children’s involvement in household chores

CHILDREN AGED 5—14:

- **54 million** performing household chores for at least **21 hrs/week**
- **29 million** performing chores beyond **28 hrs/week**
- Nearly **7 million** performing household chores for at least **43 hrs/week**

Two-thirds of these children are girls

Estimates of children’s involvement in household chores, produced for the first time for the 2016 Global Estimates of Child Labour, indicate that responsibility for chores is common among children: 800 million children aged 5-17 years spend at least some time each week performing chores for their households. Girls are much more likely than boys to perform household chores at every age range and in every weekly hour bracket, confirming the common assumption that girls must shoulder a greater responsibility for this form of work in most societies.

There are 54 million children aged 5-14 years who perform household chores for at least 21 hours per week, the threshold beyond which initial research suggests household chores begin to negatively impact on the ability of children to attend and benefit from school (see Figure 3). Girls account for 34 million of this group, or about two-thirds of the total. There are 29 million children aged 5-14 years — 11 million boys and 18 million girls — performing chores beyond a higher threshold of 28 hours per week. Nearly 7 million of those performing household chores in this age range do so for extremely long hours — 43 or more each week; again, two-thirds of these are girls.

Household chores and economic activity of children are not, of course, necessarily mutually exclusive activities. Many children undertake both forms of work as part of their daily lives. The new estimates indicate that this holds true even among children logging substantial numbers of hours — at least 21 — each week in household chores. One-fourth of these children — 13 million children in absolute terms — also work in economic activity, adding to the total time they must allocate to work each week, and consequently making it even more difficult for them to find time for their studies (see Figure 3). Again, a larger number of girls than boys must shoulder this form of double-duty.
Why have we seen a slowdown over the last four years? While there is no single or simple answer to this question, it is worth noting that the overall slowdown is driven primarily by the slippage in progress witnessed in sub-Saharan Africa. Progress in the other regions continued over the 2012-2016 period. The question becomes, therefore, mainly about the factors that have hindered progress in sub-Saharan Africa, despite the number of targeted policies implemented by governments in the region to combat child labour. It is likely that the lack of progress in the region relates primarily to broader economic, demographic, geopolitical, and climatic forces acting against governmental efforts, although this is a matter requiring further research. The sub-Saharan Africa region, for instance, is the only one to have seen a rise in the absolute numbers of poor in recent years. It is also among those affected by situations of state fragility and crisis, and by natural disasters and population displacements associated with global climate change, which in turn are known to heighten the risk of child labour.

African leaders recognize the size of the challenge they face and the African Union has initiated the process for the formulation of a comprehensive action plan for achieving SDG Target 8.7, which calls for the immediate prohibition and elimination of the worst forms of child labour and, by 2025, an end to child labour in all its forms. Positive policy experiences in a number of African countries are also helping to guide efforts in the region moving forward. Initial evidence concerning the impact of cash transfer in countries such as Lesotho and Malawi, for example, point to their promise in reducing family reliance on child labour and in permitting them to instead invest in their children’s education.
Child labour estimates by region and national income grouping

Africa ranks highest among regions both in the percentage of children in child labour — one-fifth — and the absolute number of children in child labour — 72 million. Asia and the Pacific ranks second highest in both these measures — 7 per cent of all children and 62 million in absolute terms are in child labour in this region. The Africa and the Asia and the Pacific regions together account for almost nine out of every ten children in child labour worldwide. The remaining child labour population is divided among the Americas (11 million), Europe and Central Asia (6 million), and the Arab States (1 million). In terms of incidence, 5 per cent of children are in child labour in the Americas, 4 per cent in Europe and Central Asia, and 3 per cent in the Arab States.

Dividing countries by national income levels offers additional insights into where child labour occurs in the world. As reported in Figure 5, the incidence of child labour is highest in the low-income countries, at 19 per cent, but it is also far from negligible in countries belonging to other income groups.

Among regions, Africa has the highest number of child labourers and the highest percentage of its children in child labour. Asia and the Pacific is close behind in terms of absolute numbers of child labourers.

FIGURE 4: Percentage and number of children (in millions) in child labour by region
Nine per cent of all children in lower-middle-income countries, and 7 per cent of all children in upper-middle-income countries, are in child labour. Statistics on the absolute number of children in child labour in each national income grouping, reported in Figure 5, indicate that **84 million children in child labour**, accounting for 56 per cent of all those in child labour, actually live in middle-income countries, and an additional 2 million live in high-income countries. These statistics make clear that while poorer countries will require special attention, the fight against child labour will not be won by focusing on poorer countries alone. Across poor, middle-income, and rich countries, the common denominator appears to be family and community poverty.

**FIGURE 5: Child labour and national income**
Assessing the pace of progress

A simple charting of rates of decline over the four-year intervals starting in 2000 highlights the uneven nature of progress to date (Figure 6). The first four-year interval, 2000 to 2004, saw substantial strides forward, leading to the optimistic conclusion that the end of child labour was “within reach” by 2016. But this optimism was tempered considerably by the results of the next interval, 2004 to 2008, which pointed to a marked slowing of progress and provided an early warning sign that attaining the 2016 target would be difficult if existing policies were not changed. The penultimate four-year interval, 2008 to 2012, brought much better news — a decline in the number of children in child labour of 22 per cent. Although this period coincided with a deep global economic recession, a number of emerging economies with significant child labour challenges continued reasonable levels of economic growth, invested in labour market and social protection policies, and saw significant declines in the incidence of child labour. The progress during 2008 to 2012 led to renewed hope that the worldwide movement was turning the corner on child labour and that progress towards ending it was picking up pace. But, as noted above, progress during 2012 to 2016 once more slowed, pushing the timeline for ending child labour further into the future.

Thus, the experience over the 16-year period has not been one of quickening or even steady progress. Instead, periods of acceleration have been immediately followed by periods of slowdown; we have not succeeded to date in generating sustained momentum towards ending child labour. This momentum will be urgently needed if we are to quicken the pace of progress toward the goal of eliminating child labour.

**FIGURE 6: Percentage change in the number of children in child labour, four-year intervals, 2000 to 2016**

Progress in reducing child labour has been uneven over the period since global monitoring began in 2000.

-2000: -9.5%
-2004: -3.2%
-2008: -22.0%
-2012: -9.7%
Even maintaining the pace achieved during 2008 to 2012, the fastest recorded to date, would not be nearly enough eliminate child labour by 2025.

FIGURE 7: Millions of children in child labour, showing actual and projected trend lines toward eliminating child labour by SDG 8.7 target date 2025
How much faster do we need to go in order to realize Target 8.7 of the SDGs calling for the end of child labour in all its forms by 2025? A simple projection of future progress based on the pace of progress achieved during 2012 to 2016 clearly indicates the challenge ahead. As reported in Figure 7, maintaining the current rate of progress would leave 121 million children still engaged in child labour in 2025, of whom 52 million would be in hazardous work. A similar calculation, also shown in Figure 7, indicates that even maintaining the pace achieved during 2008 to 2012, the fastest recorded to date, would not be nearly enough. Getting to zero by the end of 2025 will require accelerated efforts. The task that lies ahead is enormous. We are moving in the right direction, but we have to do so at a much faster rate.

The global child labour trends mask a more complicated picture at the country level. Indeed, while many countries have achieved progress with large reductions in child labour, there is also a significant number of countries at the other end of the spectrum that have experienced net increases in child labour. In the middle of the spectrum are countries whose progress against child labour has stalled. This variation among countries underscores the importance of understanding why some have been more (or less) successful than others in order to guide upcoming efforts to end child labour in all its forms by the 2025 target date.
Ending child labour by 2025: A review of policies and programmes

Part 2. Identifying a policy response to child labour

How do we get from where we are now to where we want to be by 2025? Thanks to a growing body of practical experience, research, and impact-evaluations, we know progress relies centrally on an active government policy response — supported by workers’ and employers’ organizations and the wider international community — that addresses the array of factors that push or pull children into child labour. Progress does not, in other words, happen by itself, nor does it depend only on forces beyond the realm of policy. While economic growth is relevant, the accumulated evidence and experience suggests that policy choices and accompanying resource allocation decisions can matter even more.
Figure 8, which plots recent child labour levels and per capita GDP for 48 countries, helps illustrate this point. While the figure demonstrates a general negative correlation between income levels and child labour, it also shows that very different levels of child labour can be observed in countries with a similar level of economic development. This indicates that an array of other factors is at play in determining a country’s performance and success in reducing child labour.

Policy making is particularly important. In many cases, countries succeed in achieving lower levels of child labour than other countries with similar (or higher) national income levels principally because they make better or more appropriate policy choices. Rich and middle-income countries sometimes make policy choices that are not pro-poor and do not contribute to greater social justice and inclusion or to progress against child labour, while poor countries — even if they lack the resources and still require development assistance that supports their nationally-determined development priorities — can make good policy choices that begin to break the cycle of poverty that underpins child labour.

A recent study of the experiences of Brazil and Mexico in reducing child labour provides even more compelling evidence of the importance of policy. The study makes use of econometric methods to estimate the causal effects of an array of variables in reducing child labour in the two countries over the last two decades. The results indicate that while long-term structural changes in the characteristics of the population and the economy played an important role, the largest share of the total decline in the two countries was attributable to policy-related factors.
We also know a lot about what policies are most relevant. The accumulated evidence and experience suggests that four principal policy areas stand out — legal standards and regulation, social protection, education, and labour markets — all underpinned by social dialogue, which ensures their relevance. These priority policy areas were highlighted by the international community in The Hague Roadmap agreed to at The Hague World Child Labour Conference of 2010 and reaffirmed at the 2013 Brasilia Global Conference on Child Labour. Addressing the specific groups for which progress has been slowest — youngest children and girls — is a particular priority across all of these policy areas.

In the remainder of this chapter, we look in further detail at policy interventions within each of these broad areas and at what the evidence tells us of their impact. We also look at special policy measures needed to address child labour in situations of state fragility and in supply chains.

**ELEMENTS OF AN INTEGRATED POLICY RESPONSE TO CHILD LABOUR**

1. **Inclusive and equitable quality education for all**
2. **Social protection systems, including social protection floors**
3. **Decent work for adults and youth of legal working age**
4. **Legal standards and regulation**
5. **Social dialogue as a foundational element**

**FACTORS CONTRIBUTING TO CHILD LABOUR**

1. Limited legal protections
2. Poverty and social vulnerability
3. Exposure to individual and collective shocks
4. Poor quality schooling, limited school access
5. Limited decent work opportunities, difficult transitions to work
6. Absence or weak realization of freedom of association and of the effective recognition of the right to collective bargaining, and of other forms of social dialogue
Legal commitment to child labour elimination and the importance of social dialogue

THE RATIONALE

Legislation alone cannot eradicate child labour. However, it is equally impossible to eliminate child labour without adequate and effective legislation. A solid legislative framework offers many contributions to efforts against child labour: it translates the aims and principles of international standards into national law; it articulates and formalizes the State’s duty to protect its children; it sets forth specific rights and responsibilities; and it provides for sanctions for violators and for legal redress for victims. Critically, the legal commitment to protecting children from child labour that can be established through legislation is also strongly linked to concrete progress in reducing child labour. Indeed, one of the more striking and encouraging results of a recent 48-country study of child labour trends is the strong correlation between ratification of international legal standards and reductions in child labour incidence.11

POLICY APPROACHES

With India’s ratification of the Minimum Age Convention, 1973 (No. 138) and the Worst Forms of Child Labour Convention, 1999 (No. 182) in June 2017, almost all children in the world are now covered by Convention No. 182 and coverage of Convention No. 138 has risen to 80 per cent of world’s children. But ratifying the ILO’s two child labour conventions is not by itself sufficient to eliminate child labour. Much more has to be done to turn the commitment of eliminating child labour into a reality.

The first step is to transpose these international standards into national laws and concrete policies. A simple enumeration of laws and policies passed in individual countries provides a snapshot of the progress (Table I). During the period from 2004 to 2014, a total of 59 countries developed, revised, or updated their legislative framework at the national and subnational levels, affecting a total of

194 laws. Fifty-seven countries adopted and implemented 279 specific policies, plans, and programmes designed to combat child labour or the worst forms of child labour. Over the same 2004 to 2014 period, the ILO recorded the inclusion of child labour concerns in relevant development, education, social protection, and other social policies and programmes in 46 countries and in 211 policies, plans, and programmes.12 This process of integrating child labour into the development priorities of countries is especially important to achieving reductions in child labour.

This progress notwithstanding, the challenge of developing an effective legal and policy architecture on child labour at the national level remains large. For example, recent research has highlighted important incoherencies between laws governing the minimum age for admission to employment and those dealing with the age range for compulsory schooling. Currently, out of 170 ILO member States that have ratified ILO Convention No. 138, 44 set an age for the completion of compulsory education that is higher than the minimum age for admission to employment they specified upon ratification.13 Children in these countries, in other words, are allowed to enter employment before they are allowed to leave school.

Comments by the ILO Committee of Experts on the Application of Conventions and Recommendations14 suggest that many countries are also lagging in terms of honouring the commitment made upon ratification of ILO Conventions Nos 138 and 182 to adopt or review national lists of hazardous work prohibited to people under 18 years of age. Such lists are relevant not only in terms of child labour, but also in informing efforts aimed at promoting decent work among young people of legal working age.

**Effective monitoring and enforcement of child labour laws are an even greater challenge.** Workplace inspection systems remain generally weak, owing to both capacity and resource constraints. Moreover, even in contexts in which workplace inspection systems are in place, they rarely reach workplaces in the informal economy where most child labour is found.

**It is also critical that the legal architecture extends to safeguarding other fundamental labour rights,** including freedom from discrimination, and freedom of association and the effective recognition of the right to collective bargaining, as we know that the persistence of child labour and violations of other fundamental labour rights are closely related. This too remains a major challenge in many countries.

Decent work for adults and youth of legal working age

THE RATIONALE

Decent, secure, and properly remunerated work for adults and youth of working age remains the cornerstone of combating family and community poverty, and child labour is most prevalent where adults and youth of working age cannot access their rights to decent work and where social protection fails to fill the poverty gap created by the absence of decent work. That is a key reason why the ILO’s integrated policy approaches to combating child labour place such importance on the rights of working people — whether they are in an employment relationship or are own-account workers, and whether they earn their living in the formal or the informal economy, rural or urban — to exercise their freedom of association and their right to collective bargaining. In addition, well-functioning labour markets that provide decent work in well-functioning enterprises also provide the economic base for the effective taxation systems required to finance social protection systems and education and health provision — the “social wage” that is so crucial in combating inequality and social exclusion.

Child labour and decent work are directly linked in a number of ways. First and foremost, work for adults and youth of legal working age that delivers a fair income, security in the workplace, and social protection means that households do not have to resort to child labour to meet basic needs or to deal with economic uncertainty. Decent work also implies the empowerment of working people, strong labour relations, and effective freedom of association, which are in turn inimical to child labour.

Returns to education are another channel through which decent work can influence child labour. Greater opportunities for decent work in the labour market often mean greater potential returns to education. In such circumstances, evidence suggests that families are more likely to postpone their children’s involvement in work and invest instead in their education. A study of industrial transformation in Brazil, for instance, shows that expansions in high-skilled job opportunities tend to increase time spent in school while increases in low-skilled job opportunities tend to lower school attainment. Evidence also suggests that low skill production, which predominates in the informal economy, makes child labour more likely. A recent study involving 48 countries indicates that the demand for child labour grows when forms of production that require only low skill levels gain in importance. Another Brazil study demonstrates that conversely reduction in the importance of low skill industries contributed to the reduction of child labour in rural areas.

POLICY APPROACHES

Promoting decent livelihoods in the rural economy

The vast majority of children in child labour — 71 per cent globally and 85 per cent in the Africa region — work in agriculture and its various subsectors: crop production, animal husbandry, forestry, fishing, and aquaculture. Many of them work alongside their inadequately paid parents on farms, plantations, and in other registered, formal agricultural enterprises owned by a third-party employer. But the greatest share perform their child labour as unpaid family work in family farms and enterprises. Typically, they do so because families depend on the additional income that their work generates or because the family enterprise depends on their work in order to function.
Working together to address farm-based child labour: the International Partnership for Cooperation on Child Labour in Agriculture

Since 2007, the International Partnership for Cooperation on Child Labour in Agriculture brings together the ILO, the Food and Agriculture Organization of the United Nations, the International Fund for Agricultural Development, the International Food Policy Research Institute, CGIAR (formerly the Consultative Group on International Agricultural Research), the International Federation of Agricultural Producers, and the International Union of Food, Agricultural, Hotel, Restaurant, Catering, Tobacco and Allied Workers’ Associations. The partnership was launched to foster the participation of agricultural organizations and agriculture stakeholders in global efforts to eliminate child labour in agriculture.

The partnership has gained increasing recognition thanks to its steady engagement in major child labour policy dialogues, including the second and third Global Conferences on Child Labour. Advocacy and awareness-raising efforts have contributed to a better understanding of this issue and on the need for agricultural and labour market professionals to join forces and dedicate their combined knowledge and expertise towards the elimination of child labour. The partnership also carries out capacity building activities at the country level to support key actors in the agricultural sector as they address child labour issues in national policies and programmes, extension services, and monitoring activities.

The partnership works at national, regional, and global levels to:

1. Promote cooperation between agriculture and labour stakeholders and ensure coherence of policies and programmes on child labour prevention.
2. Promote youth employment opportunities in agriculture.
3. Integrate child labour concerns in the programming of activities of agricultural and labour organizations.
4. Promote the adoption of safer agricultural practices and prevent children from carrying out hazardous work in agriculture.
5. Improve rural livelihoods and income-generating activities.

These basic facts underscore the importance of improving rural livelihoods and incomes and the functioning of small family farms and enterprises to reduce household dependence on child labour as a negative coping strategy, and instead to enable informal family enterprises to hire adult workers to replace the unpaid work of their children.

Although, as reflected above, it is true that the vast majority of child labour in the sector is performed as unpaid family work, this in no way diminishes the importance of secure and adequate incomes for waged adult agricultural workers, nor the primordial importance of their rights to freedom of association and collective bargaining. Indeed, inadequate piece rates for adults and youth of legal working age have always been a key cause of child labour, as families in such circumstances have depended on the work of all family members to make ends meet. That has been the case, historically, wherever inadequately remunerated piecework has prevailed, regardless of sector or region. It remains so today.

Alongside the need for fair pay for waged agricultural work to redress the family poverty gap, family enterprises and farms need fair prices for what they produce. And those that are “functionally dependent” on the work of their children need to become viable enough to replace their unpaid work with appropriate labour-saving and productivity-enhancing methods and with adults and youth of working age employed in decent work. Pooling adult labour, as well as tools, seeds, and other resources, can assist in those efforts. Small producers’ associations and well-functioning cooperatives are also important vehicles to achieve such collective improvements.

A preliminary study in Rwanda underscores the important role that agricultural cooperatives could play. While the operational parameters differ from cooperative to cooperative in the country, most involve some form of agronomic support, access to improved storage, processing, and marketing, and more stable pricing for agricultural outputs. They are also often associated with more efficient and advanced farming methods and with less reliance on non-manual labour. The results of the study indicate that child labour among farm households belonging to agricultural cooperatives is about one-third lower than child labour in other farm households, even when controlling for other household characteristics. More research is needed to confirm and explain this result, but it is likely that cooperative membership helps reduce reliance on children’s labour by limiting income volatility and improving farm livelihoods.

These benefits depend, of course, on good governance of democratic cooperatives in line with the ILO Recommendation on the subject. One of the most significant recent activities of the International Partnership for Cooperation on Child Labour in Agriculture (see page 35) was a workshop in Ghana that brought together rural workers’ trade unions, national trade union centres, and small producers’ organizations, including cooperatives, from 13 countries in Africa to exchange their experiences of “organizing against child labour”. The Call to Action issued by the participants reflects a broader set of tried and tested policies and actions for tackling child labour and promoting rural livelihoods:

- supporting the self-organization of those who earn their livelihoods in the rural economy and strengthening their representative voice for collective bargaining with employers, including in plantation agriculture, for product price negotiations to improve adult incomes, and for influencing and promoting relevant public policies, legislation, and regulation, including mainstreaming child labour concerns into polices at all levels;
- ending family farms and enterprises’ dependence on child labour and making them viable enough to instead employ adults in decent work through (a) upgrading adult workers’ skills; (b) improving access to inputs and credits by means of community savings and credit unions and other vehicles; and (c) introducing sustainable and appropriate technologies.
• diversifying production and investing in food-processing and infrastructure, which add quality and value to locally grown produce, and improving market access; and

• developing strategies to mitigate the loss of agricultural land to urban expansion and desertification, which are also causing rural unemployment and migration and displacement from rural to urban areas, where children are vulnerable to entering child labour in the urban informal economy.

While these policy recommendations reflect the experience of organizations representing those who work in agriculture in the Africa region, many of the essential components reflect experience elsewhere and have wider application.

Addressing the informal economy

A recently adopted ILO international labour standard, Transition from the Informal to the Formal Economy Recommendation, 2015 (No. 204), has placed a renewed focus on informality as a barrier to decent work for all. Workers in the informal economy — which is comprised of numerous sectors, urban and rural — are among the most vulnerable and least protected groups. The informal economy exposes working people to the risk of denial of rights at work, including the right to organize and bargain collectively (and thus to a lack of social dialogue); absence of sufficient opportunities for quality employment and assurance of occupational safety and health; and inadequate social protection. All of these run contrary to the concept of decent work and increase the likelihood that working households must rely on children’s labour as a negative coping strategy.

The informal economy is characterized by a high concentration of children in child labour and of young workers in low-productivity jobs with difficult working conditions. While child labour is most widespread in informal work in agriculture, there are number of other sectors in which child labour has an important presence, either because of the numbers involved or because the prevalence of hazardous and often extremely hazardous work; or because of the forced labour of children, notably in the form of bonded labour. Among these are artisanal mining, including of gold, cobalt, mica and coal; brick kilns; manufacturing; street work; and the very large number, especially of girls, still engaged in child labour in domestic work.

Identifying the specific factors that contribute to the dynamics of formality and informality in national and local contexts is a necessary, though complex, step for developing appropriate policy responses. Current policy initiatives around the world, reviewed in an ILO report prepared for the 103rd Session of the International Labour Conference in 2014, show that there is no one-size-fits-all policy approach to promoting transition from the informal to the formal economy, but rather a set of multidimensional approaches that can be adapted to each specific country context. The policies adopted most often simultaneously target the following objectives:

• promoting formal employment through pro-employment macroeconomic and sectoral policies focusing especially on the development of sustainable micro, small, and medium enterprises;

• reducing informal employment by lowering the cost of transitions to formality through the creation of an enabling policy and regulatory environment that reduces barriers to formalization while protecting workers’ rights, as well as increasing the benefits of being formal through business development services that promote access to markets, productive resources, credit programmes, and training and promotional programmes to upgrade informal economy units; and

• increasing decent work in the informal economy by developing a national social protection floor for all, implementing a minimum wage and health and safety incentives, enabling the self-organizing of informal economy workers, encouraging informal enterprises to join together
Ending child labour by 2025: A review of policies and programmes

The same ILO policy review shows that approaches anchored in social dialogue can make formalization a much more attractive option and can have a more sustained impact.

Investing in skills development and in lifelong learning opportunities is especially important to the ability of workers in the informal economy and young people entering the labour market to access gainful and productive jobs in the formal economy. Training needs to be responsive both to the diverse requirements of informal economy workers and to the evolving demands of the labour market. Priorities should include reforming formal training systems so they are more open to informal economy workers and establishing better linkages with employers in the design and provision of training. Informal apprenticeship schemes have also shown considerable promise in imparting skills in the informal economy in many developing countries, and particularly in Africa. Skill accreditation is another important priority. The ability of many informal economy workers to move up the skills ladder is constrained by the fact that skills acquired through experience, on-the-job training, and apprenticeship are not recognized in formal labour markets or by training institutions. Bangladesh offers a model in that it has established a National Technical and Vocational Qualifications Framework to encourage accreditation for skills acquired through work in the informal economy by providing benchmarks for skills attainment, alignment, and recognition.

Progressively extending minimum wage protections to workers in the informal economy through the process of formalization is another one of the specific recommendations contained in ILO Recommendation No. 204. In recent years, many countries have established or strengthened minimum wage systems to address working poverty and inequality and to promote decent work. These include developing and emerging economies such as China, Brazil, the Russian Federation, and, most recently, South Africa, which announced a new national minimum wage coming into force in 2018.

In earlier debates, some scholars had suggested that the implementation of minimum wage legislation could have ambiguous effects if it caused some adults to become unemployed and, consequently, send their children to work. Recent evidence has shown, however, that if they are set at an adequate level, adverse effects of minimum wages are small or non-existent and that adequate minimum wages can increase consumer demand for basic requirements and stimulate employment creation. A World Bank review noted that “although the range of estimates from the literature varies considerably, the emerging trend in the literature is that the effects of minimum wages on employment are usually small or insignificant (and in some cases positive)”. But differences in findings across countries and studies point towards the importance of good policy design and the need for further research on the links between minimum wages, living wages, and child labour. In fact, child labour may be linked not only to the level of adult wages but also to wage payment systems. Anecdotal evidence and historical research suggest that poorly designed piece rate payment systems may lead to greater use of child labour to increase the output of adult workers.

More broadly, securing adequate wages for vulnerable workers can have a dramatic impact in reducing child labour. In Egypt, for instance, a study shows that a 10 per cent increase in the market wage for illiterate males decreases the probability of child labour by almost 22 per cent for boys and 13 per cent for girls.
Promoting decent work opportunities for youth of legal working age

Expanding decent work opportunities for youth of legal working age is of particular importance to broader efforts towards decent work for all. The costs of prolonged unemployment or underemployment during this critical period of life are well known. It can permanently impair productive potential and therefore influence lifetime patterns of employment, pay, and job tenure. Negative work-related behaviours and attitudes established during this period can also persist into later stages of working life. The benefits of successful transitions from education to decent work are equally clear. Success early in working life is linked to better long-term career prospects. More broadly, it moves young persons into situations of self-sufficiency and helps them exit from poverty.\(^{32}\)

While there is no one-size-fits-all approach in terms of how to promote and facilitate the transition to decent work for young persons, an extensive body of evidence and policy experience points to a set of core policy areas that need to be considered in relation to national and local circumstances. Besides pro-employment macroeconomic policies, relevant active labour market interventions include training and skills development; public works; job search support and other labour market services; employment subsidies; and self-employment and entrepreneurship promotion.\(^{33}\)

Youth employment efforts should be framed within a broader emphasis on ensuring young persons’ rights at work in order that they receive equal treatment and are protected from abuse and exposure to hazards.\(^{34}\) The resolution dealing with youth employment, agreed by the representatives of governments and workers’ and employers’ organizations at the 101st session of the International Labour Conference in June 2012, offers guidance to governments and the social partners in developing youth employment policies that are consistent with the provisions of international labour standards.\(^{35}\) In particular, the enforcement of labour laws and collective agreements should be strengthened and the participation of young people in employers’ and workers’ organizations and in social dialogue should be enhanced.

Addressing child labour among adolescents

Half of 15-17 year-olds performing hazardous work are in agriculture.

![Children aged 15-17 in hazardous work, by sex](image1)

![Children aged 15-17 in hazardous work, by sector](image2)

**FIGURE 9:** Children aged 15-17 in hazardous work
There are more than 37 million children — 23.5 million boys and 13.6 million girls — in the 15-17 years age range in child labour. About half are found in agriculture and the remainder are divided evenly between services and industry (Figure 9). These children, though they may be above the general minimum age for work, are considered to be in child labour precisely because their work is hazardous or because they are engaged in another worst form of child labour. They account for 42 per cent of all 15-17 year-olds in work and employment.

Hazardous work poses immediate threats to health and safety and can create huge barriers — educational, physical, psychological, and social — that impede a young person from transiting successfully to adulthood and working life. This discussion underscores the importance of giving the necessary attention to 15-17 year-olds in child labour within broader efforts to promote decent work for youth and to promote occupational safety and health (OSH) in all workplaces.

An integrated strategy is needed to remove youth from intrinsically hazardous jobs or, where appropriate measures can be taken, towards eliminating the hazardous conditions encountered by youth in the workplace. In instances in which adolescents in the 15-17 years age range are working in sectors or occupations designated as hazardous, or where there is no scope for improving working conditions, the policy requirement is clear — they must be removed from the hazardous job. In these cases, it is imperative that there is also a strategy in place for providing withdrawn youth with adequate support services and second chances for education, training, and securing decent work. Adolescents withdrawn from worst forms of child labour frequently also need a range of social services such as emergency shelter, medical care, psychosocial counselling, legal support, family tracing, and assessment and post-reintegration follow-up.

Risk mitigation is a strategic option in instances where youth are exposed to hazards in sectors or occupations that are not designated as hazardous in national hazardous work lists and where scope for changing working conditions exists. Such a strategy involves measures to remove the hazard, to separate the child sufficiently from the hazard so as not to be exposed, or minimize the risk associated with that hazard. Within existing and potential programmes, there may also be opportunities to change practices and technologies that offer a sustainable solution to occupational safety and health concerns for all ages. Addressing OSH concerns of youth in isolation from the OSH concerns of adults — and vice versa — makes little sense. If a workplace or work process is not safe for an adult, it cannot be safe for a child.

Especially important in the context of risk mitigation is training and awareness-raising about occupational safety and health for employers and their young workers, master craftspersons and their apprentices, and trade union OSH representatives, including on adequate and consistent supervision. Another priority is the implementation of adequate monitoring mechanisms. Trade unions, employers’ and business associations, chambers of commerce, community organizations, and social protection agencies — when properly trained and linked with the labour inspectorate — can monitor minimum age guidelines, the safety of the workplace, and its adolescent workers. Agricultural extension services can also be involved in these efforts. All evidence indicates that unionized workplaces, especially those with joint employer-union procedures to promote OSH, are safer.

The institution of a “strategic inspection plan” can be useful in identifying workplace hazards facing adolescents and that require follow-up. Such a plan draws from statistical evidence to steer resources for monitoring labour conditions and compliance toward

Ending child labour by 2025: A review of policies and programmes

THE RATIONALE

The relevance of poverty and shocks to child labour is straightforward. Poverty constrains a household’s ability to postpone children’s involvement in work and invest in their education. In other words, poor households are more likely to have to resort to child labour at the expense of their children’s education in order to meet basic needs and deal with uncertainty. Exposure to shocks such as sudden job loss, or illness or injury to breadwinners or other family members, can also influence household decisions concerning child labour. In the absence of other coping mechanisms, households can be forced to resort to child labour. For this reason, social protection floors, are vital elements of policy responses to reduce and prevent poverty and to eradicate child labour. Attributes that accompany income poverty, also points to a strong positive correlation between poverty and child labour. Country studies on child labour, for instance, consistently show that poor children are more likely to work than their better-off peers, other factors being equal. A growing number of longitudinal studies also consistently support the view that poverty induces households to rely more on child labour.

Evidence also lends support to the argument that families often use child labour as a buffer against shocks. Studies in Cambodia and Tanzania, for instance, found that child labour was substantially higher in villages experiencing agriculture-related shocks such as drought, flood, and crop failure. A study looking specifically at unemployment shocks in urban Brazil found that adult job loss had a sizeable effect on the likelihood of child labour and school dropout. Another study of the impact of the harsh economic downturn in Venezuela during 2002-3 found that the proportion of children engaged in market work nearly doubled during the period of declining GDP and then fell back as the economy recovered.
POLICY APPROACHES

This evidence makes clear that continued progress against child labour will require policies that help mitigate the economic vulnerability of households. There is a growing body of research and experience pointing to the relevance of social protection instruments in this regard. Below we look at evidence of the child labour impact of six such instruments — cash and in-kind transfer programmes, public works programmes, health protection, social protection for people with disabilities, income security in old age, and unemployment protection. We do not look explicitly here at the other main types of social security benefits identified in ILO Social Security (Minimum Standards) Convention, 1952 (No. 102), namely sickness benefits, employment injury benefits, maternity protection, and survivors’ benefits. These benefits, while also potentially important, have not yet been evaluated from a child labour perspective.

Transfer programmes directed at families with children

Cash and non-cash transfer programmes are forming an increasingly important part of social protection floors in a number of countries. These programmes can be either conditional or unconditional; that is, they can require households to fulfil certain behavioural conditions in order to be eligible for benefits, or they can make these benefits available without regard to the activities of household members. There is strong evidence that transfer programmes have a clear and positive impact on enhancing human development, enhancing and stabilizing consumption, and facilitating social cohesion and inclusion. While these programmes therefore appear successful in achieving their broad policy objectives, we are interested here in assessing their effectiveness in tackling child labour.

FIGURE 10: Percentage of children aged 5-14 years in child labour, by income quintile, selected countries

Notes: (a) Child labour is proxied as children performing economic activity.

In most countries child labour is considerably more prevalent among poorer households.
The extensive evidence on conditional cash transfer (CCT) schemes indicates that they tend to lower both the prevalence and time intensity of child labour and to mitigate the effect of economic shocks that may push children into work. Impact evaluation studies suggest that CCTs have a particularly strong impact on work for pay and on work outside the house for boys and older children, and on household chores for girls. However, these studies also indicate that the magnitude of their impact varies substantially from one programme and location to the next, as reported in Figure 11. In no instances are CCTs successful in eliminating child labour altogether, underscoring that cash transfers alone can be an important but not a complete policy response to child labour.

In what circumstances do cash transfer schemes appear to be most effective? Most impact-evaluation studies show that children from poorer backgrounds exhibit stronger reductions in child labour than those from wealthier households, highlighting the importance of ensuring that poorer children and families are effectively reached by cash transfer schemes. The evidence also suggests

Notes: (a) *p<0.05, **p<0.01; (b) The definition of child labour is not consistent across studies; (c) Imputed estimate based on non-significant disaggregated estimates; (d) Imputed estimate based on partly significant disaggregated estimates; and (e) Imputed estimate based on significant disaggregated estimates.

that impact is larger when cash transfer schemes are coupled with supply-side interventions such as provision of after-school education or of generalized benefits such as health and education facilities.\textsuperscript{52} The evidence suggests that transfers may be less effective, on the other hand, in instances where transfers are invested in productive activities such as land, livestock, or micro-enterprises, as these investments often have the effect of creating opportunities for children’s involvement in family production.\textsuperscript{53} The size of the transfer relative to household income is not directly related to the size of the impact. What presumably is relevant, however, is the size of the transfer relative to the amount necessary to offset the income from children’s labour.

A question that often arises in discussion on the impact of cash transfers is the relevance of conditionality. In other words, the question of whether the addition of a schooling requirement or other human development-related behavioural conditions to cash transfer schemes changes their impact on child labour. This question is of course critical for the purposes of policy design, but there is unfortunately little solid evidence addressing it. More research is needed concerning the impact of conditionality on families’ child labour decisions, building on recent research addressing links between conditionality and school attendance.\textsuperscript{54} Also needed is a better understanding of the comparative effects of means tested versus generalized benefits, not least on children in family enterprises that are dependent on their children’s labour, not simply to increase direct income but in order to function.

More evidence about the long-term effects of cash transfer programmes is also needed. A study of a schooling promotion project for children working in the export-oriented, handmade carpet sector in Nepal, for instance, shows that cash transfers covering school expenses conditional on school attendance reduced child involvement in carpet weaving, in particular for girls, but that the effects dissipated after the programme ended.\textsuperscript{55}

### Working together towards universal social protection coverage: the World Bank Group and ILO Universal Social Protection Initiative

The World Bank and the ILO share a vision of a world where anyone who needs social protection can access it at any time. The vision states that both institutions recognize that universal social protection is a goal that we strive to help countries deliver. Achieving universality would facilitate the delivery of the World Bank’s corporate goals of reducing poverty and increasing shared prosperity and the ILO’s mandate of promoting decent work and social protection for all. This shared mission would drive the development agenda to ensure lasting peace, prosperity, and progress.

\textit{continued on next page}
Working together towards universal social protection coverage: the World Bank Group and ILO
Universal Social Protection Initiative (continued)

The Objective: Increase the number of countries adopting universal social protection

The ILO and the World Bank's shared objective is “to increase the number of countries that can provide universal social protection, supporting countries to design and implement universal and sustainable social protection systems”. The objective recognizes the aspirational elements of the ILO and the World Bank's shared vision, and that the means of achieving the vision is through either the progressive or immediate realization of social protection, as well as through ensuring that there is no retrogression on progress achieved.

The objective recognizes that if countries develop comprehensive systems providing universal protection across the life cycle, and there is sufficient evidence that social protection systems are affordable, efficient, effective, and equitable, then more countries will adopt these systems as part of their national development strategies. It also recognizes that there are large synergies and advantages if the ILO and the World Bank collectively support the development of universal social protection systems in countries, with a focus on sustainable domestic financing.

Social protection and, in particular, universal social protection, figure prominently in the Sustainable Development Goals. SDG Target 1.3 calls specifically for implementation of nationally appropriate social protection systems and measures for all, including floors, and by 2030 achievement of substantial coverage of the poor and vulnerable. Social protection policies feature elsewhere in SDG goals to achieve gender equality and to reduce income inequality both between and within countries.

Timebound Actions

The World Bank and the ILO have declared that they will work together to achieve this shared vision until the Sustainable Development Goals are realized.

In the short term, the ILO and the World Bank will document country experiences on universal social protection coverage, preparing succinct case studies presenting how countries achieved universal social protection coverage and extracting good practices relevant for other countries. The two organizations will also analyse the financing implications of universal social protection, gather evidence about ways this can be innovatively resourced, and collaborate on other topics important to generate political will, such as by presenting the investment case and socio-economic benefits of providing universal social protection.

In the medium term, the World Bank and the ILO will use their individual and collective resources and influence to support countries in their move towards providing universal coverage. This will include joint support to countries in their efforts to harmonize social protection policies, programmes, and administration systems, expand fiscal space for universal social protection, address bottlenecks, and effectively integrate universal social protection into their national development strategies.

Public works programmes

Public works programmes serve the primary goal of providing a temporary source of employment to adult members of the household and the secondary goal of helping rehabilitate public infrastructure and expand basic services. These programmes are common in post-conflict or post-disaster situations, to provide some of the poorest a basic income with a potential multiplier effect on local economies, and to help address youth employment and ex-combatant reintegration. While public works programmes do not target child labour directly, the additional income they provide to the household and the temporary increase in demand for unskilled labour may affect the allocation of children’s time. The effectiveness of public works programmes in reducing child labour remains an open question. To date there are studies of the child labour impact of five separate public works programmes — Ethiopia’s Public Safety Net Programme, India’s Mahatma Gandhi National Rural Employment Guarantee Scheme (one of the largest public works programmes in the world), Youth Cash for Work programme in Sierra Leone, the Programme for Unemployed Male and Female Head of Households in Argentina, and the Labour Intensive Public Works Programme in Malawi. Overall, the results from the available impact evaluations seem to indicate that public works programmes do not generate any relevant reduction in child labour. On the contrary, the evidence indicates that in some instances these programmes increase child labour, as children may take over the activities otherwise undertaken by participating parents, particularly with regard to household chores.

It is not clear, however, how the design features of public works programmes affect the main results. Potentially, the temporary nature of the employment programmes explains why children’s time is spent on household chores or in activities previously carried out by adults. Public works programmes aim to provide short-term employment to the poor; thus, they should be distinguished from other labour programmes that are meant to have a longer-term impact on adult employment. If beneficiaries of public works programmes know that the programme will provide employment for only a short period (weeks or few months), they may resort to child labour to substitute for adult work temporarily while adults are engaged in public works programmes, then after the programme ends parents and children return to their normal activities.

Complementary programmes to address the need for household labour while the adult beneficiary is employed, and to support school leavers’ transition into long-term employment, could potentially alleviate the reliance on children. In addition, some public works programmes provide child care facilities at worksites, which could alleviate the burden on older children to care for their younger siblings. However, the number of public employment programmes that have been evaluated from a child labour perspective remains limited, notwithstanding their increasing popularity with government and funding partners. This is an area where additional information to guide programme design is especially needed to guard against adverse programmatic effects on children.

Other social protection instruments

The limited evidence available to date suggests that health protection, social protection for persons with disabilities, income security in old age, and unemployment protection are all of potential relevance to efforts against child labour.

Health protection. Extending health protection to address the social distress and economic loss associated with ill health appears to be directly relevant to efforts against child labour. Studies in Zambia and Togo show that households can respond to health shocks by significantly increasing their use of child labour, suggesting that child labour acts as a buffer or insurance against the impact of health-related shocks to the household. At the same time, evidence from Guatemala and Pakistan indicates that providing families with
health insurance can reduce reliance on child labour. Evidence from Kenya suggests that providing access to essential health services (in this case, antiretroviral treatment for HIV-positive household members) can have a similar effect. The ultimate objective should be to achieve universal health protection, defined as effective access to at least essential, affordable, and available health care of adequate quality and financial protection in case of sickness. Achieving this objective would effectively remove one important cause of child labour.

Social protection for persons with disabilities. The social and economic vulnerabilities associated with disabilities can increase household reliance on child labour. Detailed studies in Nepal, Bangladesh, and Gansu Province, China have found that children in households where adults are sick, disabled, or have missed work are more likely to be in child labour or household chores. There is a wide array of social protection measures that can be taken to address the vulnerabilities accompanying both short-term and long-term disabilities. These include contributory and non-contributory disability benefits, wage replacement for disabling injuries and illnesses, and provision of social care services for people with disabilities or who suffer long-term illness. More research is however needed to identify the specific impact of such measures against child labour.

Income security in old age. A guaranteed, reliable pension can have a noticeable impact on the lives of children and on their vulnerability to child labour in particular. This is evidenced by studies in South Africa and Brazil indicating that pensions help reduce child labour, and by studies from a range of countries linking pensions with improved schooling outcomes. Pension schemes or similar measures help provide income security and a social protection floor for older persons, helping them offset social vulnerabilities associated with ageing. The benefits of such schemes, however, extend well beyond the direct recipient. In multi-generational households, which are commonplace in the developing world, old age pensions can play a key role in the economic security of the household as a whole, including its youngest members.

Unemployment protection. Involuntary unemployment is another source of economic vulnerability for families that is associated with child labour. Evidence from Tanzania, Argentina, Brazil, and Togo suggests that when an adult member of the household loses his or her job, the household can be forced to rely on their children’s labour as a coping strategy in the absence of unemployment protection. These findings point to the potential of unemployment protection in efforts against child labour. The objective of unemployment protection is to provide at least partial income replacement, enabling the beneficiary to maintain a certain standard of living during the transition period until a new employment is available. By securing the income needs of households buffeted by loss of work, unemployment protection schemes can have a role to play in reducing household dependence on child labour. No studies, however, have been undertaken to date directly linking unemployment protection schemes or other statutory income support programmes for the unemployed with child labour. Such research would need to take into account the nature of work performed by adults, particularly in their own small family farms and enterprises in which much child labour takes place, when there is no identifiable employer.

Complementary social finance schemes
Social finance schemes, such as appropriate microcredit and microinsurance, can complement social protection systems by facilitating access of vulnerable families to the financial market and enable them to hedge against part of the risks they face.

Microcredit. Lack of access to credit has been recognized as one of the causes of the inability of vulnerable households to engage in profitable entrepreneurial activities.
Microcredit programmes may increase household income and concomitantly reduce child labour by addressing the constraint to entrepreneurial activity. However, access to credit may also open new opportunities for children to work in the household enterprise (depending on the degree of complementarity between physical capital, adult and children’s work) or to substitute for activities otherwise carried out by adults in the household.

**The limited evidence on the impact of microcredit on child labour is inconclusive.** Studies in rural Morocco and rural Ethiopia analysed the impacts of microcredit on several socioeconomic outcomes in a context where microfinance was not targeted towards women and was almost non-existent in the village prior to the intervention. In rural Morocco, children from households that had access to microcredit showed a significant reduction in time spent on household chores and work activities outside the household, while in rural Ethiopia there was no evidence of changes in the total number of hours worked either outside the household or in self-employment activities. Two other studies examining the impacts of lending programmes targeted specifically to women — a group lending programme targeted at women in Hyderabad, India, and an expansion of microcredit in north-central Sonora, Mexico — showed no impact on child labour, either measured in terms of working hours or participation in economic activity. Further studies are also needed about the effect of successful microcredit and savings schemes on women’s empowerment and consequent effects on child labour.

**Microinsurance.** Evidence on other types of social finance programmes is also limited. A study of Pakistan’s National Rural Support Programme suggests that insurance against health shocks has the potential to lower child labour. The programme provides eligible clients with microcredit accompanied with mandatory health insurance for loan clients, their spouses, and their children under the age of 18. The results show that the insurance extension reduced participation in child labour and children’s engagement in hazardous work, hours worked by children, and children’s earnings. The exact magnitude of these effects are particularly strong for boys. Given that there is only one study, however, more is needed to establish the potential effectiveness of microinsurance programmes in addressing child labour.

**An integrated social protection systems approach.** What conclusions can be drawn from the evidence concerning the social protection instruments that are most effective in addressing child labour? Child labour is driven by economic vulnerabilities associated with an array of inter-related contingencies — e.g., inadequate and insecure incomes, unemployment, ill health, disability, and old age — encountered over the life cycle. Following from this, there is no single “optimal” social protection instrument for addressing child labour; rather, the range of contingencies associated with child labour needs to be addressed by a combination of instruments within an integrated systems approach. Transfer programmes, public employment programmes, health protection, social protection for people with disabilities, income security in old age, and unemployment protection, *inter alia*, are all relevant in this context. For this reason, accelerating progress towards universal social protection through strengthening social protection systems, including social protection floors, are key for the eradication of child labour, and for achieving SDG targets 1.3 and 8.7.

THE RATIONALE

The international community’s efforts and the obligations of member States towards ending child labour and ensuring inclusive and equitable quality education for all (Sustainable Development Goal No. 4) are inextricably linked. There is broad consensus that the single most effective way to stem the flow of school-aged children into child labour is to improve access to and quality of schooling, so that families have the opportunity to invest in their children’s education and the returns to such an investment are greater than those associated with involving children in work. Conversely, when the expected returns to education are low or education costs are unaffordable, schooling is likely to be seen by households as a less attractive or viable alternative to work for their children.

At the same time, child labour is one of the main obstacles to achieving SDG4, as involvement in child labour is generally at a cost to children’s ability to attend and perform in school. The 2016 Global Estimates, reported in Figure 12, indicate that a very large number of children in child labour are completely deprived of education. In the 5-14 years age group, there are 36 million children in child labour who are out of school, 32 per cent of all those in child labour in this age range. Country level statistics also indicate a significant attendance gap between children in child labour and children not in child labour in almost every country. Studies suggest that child labour also adversely affects the learning achievement of the considerable number of children who combine work and school, often resulting in these children leaving school prematurely and entering full-time into work. These indicators fit within a broader area of concern emerging from the latest Global Estimates — between 2012 and 2016 there was almost no reduction in the number of children of primary school age engaged in child labour.

FIGURE 12: Number of children in child labour, aged 5-14 years, by school attendance status

- Children in child labour and attending school: 78.3 million
- Children in child labour and NOT attending school: 36.1 million

Nearly a third of children in child labour up to age 14 are completely deprived of schooling.
POLICY APPROACHES

Early childhood development, care, and pre-primary education

The 2016 Global Estimates highlighted the lack of progress in reducing child labour among youngest children as a particular concern. Getting children off to a good start through appropriate early childhood development, care and pre-primary education programmes is one of the most important strategies for ensuring that children transition successfully from early childhood to school rather than to the workplace. These programmes play a vital role in promoting learning readiness and in sensitizing parents to the importance of school participation. These benefits can in turn help to increase school enrolment, reduce grade repetition and dropout from school, and reduce the flow of children into child labour.

In Cambodia, for instance, availability of preschool facilities is consistently associated with lower rates of involvement in economic activity and with higher rates of school attendance.66 An evaluation of the impact of a preschool programme implemented in Mozambique in 30 villages67 indicates a substantial increase in preschool participation as well as a reduction in hours worked on the family plot. A study in Uruguay indicates that preschool attendance has a positive effect on completed years of primary and secondary education through reduced grade repetition and lower dropout.68

Evaluations of more comprehensive early childhood development programmes indicate that they can be especially effective in improving children’s success in school and later life, particularly for vulnerable, at-risk children who live in poverty or in low-income households. For example, the Uganda Nutrition and Early Child Development Project, initiated in 1998, aims to improve the nutrition, health, psychosocial, and cognitive growth and development of children under six years of age. An evaluation of this project indicates positive and significant effects on school enrolment for children aged 3 to 5 years and a positive and significant effect on the highest grade attended.69 Similarly, in the Philippines, a programme aimed at enabling local governmental units to deliver a broader and better set of early childhood development services caused improvement in cognitive, social, motor, and language development.70

Reducing direct schooling costs

The high costs associated with schooling can mean that school is simply not affordable as an alternative to child labour. In some instances, for example, a lack of public facilities can mean a reliance on costly private providers that are beyond the means of many of the poorest.71 In other cases, out-of-pocket costs for school fees and necessary items such as textbooks and uniforms can keep children out of the classroom. High transportation costs are another frequently cited barrier. In Tanzania, for example, almost 40 per cent of children who have never attended or have dropped out of school cite that school is either too far away (21 per cent) or too expensive (17 per cent).72 Similarly, in Ghana, more than one-third of out-of-school children do not go to school because of distance (19 per cent) or high costs (17 per cent).73

Evidence also underscores the positive effect of reducing or eliminating school costs. The elimination of school fees in many countries at the beginning of the new millennium contributed to a large rise in enrolment; this was especially the case in sub-Saharan Africa.74 Evaluations of interventions designed to reduce costs indicate a positive effect on enrolment. For instance, in rural Kenya, a small programme provided free uniforms and textbooks, along with better classrooms. An evaluation of this programme shows that dropout rates fell considerably in treatment schools and that after five years, pupils in treatment schools had completed about 15 per cent more schooling as compared to students in control schools. Increased availability of textbooks also helped to improve test scores, but only among the better-performing students.75
The SDG-Education 2030 Steering Committee: working together towards ensuring inclusive and equitable quality education and promoting lifelong learning opportunities for all (SDG4)

Global multi-stakeholder group to achieve education targets of the SDGs.

Develops recommendations on actions to take at global and country levels.

Recommends strategies for finance and resource mobilization.

The SDG-Education 2030 Steering Committee is the global multi-stakeholder coordination mechanism for education in the 2030 Agenda. Its primary objective is to harmonize and strengthen support to member States and their partners to achieve the education-related targets of the global agenda.

The Steering Committee is composed of 38 members representing a majority from member States, the World Education Forum 2015 convening agencies (ILO, UNESCO, UNDP, UNFPA, UNHCR, UN Women, and the World Bank), the Global Partnership for Education, the OECD, regional organizations, teacher organizations, and civil society networks, in addition to representatives from the private sector, foundations, youth, and student organizations.

The Steering Committee meets once or twice a year to provide strategic advice on priority issues. It is supported by four working groups, which contribute technical input and recommendations in the following areas:

1. **Policies and strategies**: develops recommendations on follow-up actions at global, regional, and country levels to facilitate implementation of SDG4. It bases its guidance on the Global Education Monitoring report findings and recommendations, as well as on other resources, which review progress on policies and strategies on implementation of education targets.

2. **Financing of education**: suggests strategies and recommendations on finance and resource mobilization for Education 2030; engages, with other global financing mechanisms for education; and seeks means to align and avoid duplication of efforts.

3. **Review, monitoring and reporting**: proposes recommendations on the monitoring and indicator framework implementation at global, regional, and national levels; harmonizes perspectives across partners around review, monitoring, and reporting on SDG4 targets; and facilitates the endorsement of indicator frameworks as elaborated by the Technical Cooperation Group, led by the UNESCO Institute for Statistics.

4. **Advocacy and communication**: shares information and resources across the different constituencies, develops key messages, and proposes actions to advocate for increased political commitment to SDG4-Education 2030 based on the findings of the Steering Committee working groups.

Reducing indirect schooling costs

At least as important as a barrier to schooling are the indirect costs associated with children’s time in the classroom; in other words the value of children’s foregone earnings or production arising from studying instead of working. Conditional cash transfer schemes that provide monthly cash transfers to households conditional on children’s school attendance are one means of offsetting indirect schooling costs. As discussed earlier in this chapter, the extensive evidence on these schemes indicates that generally succeed in lowering child labour.

The much more limited evidence suggests that in-kind transfers, not covered in the discussion on cash transfers earlier, can also affect child labour by reducing the indirect cost of sending a child to school. There are two types of in-kind transfers where child labour outcomes have been reported: school feeding programmes (some of which have a take-home component) and school vouchers. A study of the Bangladesh Food for Education Programme, which comprises take-home rations given to poor households with children in primary school, shows a reduction of child labour, but not by nearly as much as the increase in the number of children benefiting from education as a result of the programme.96 A study on Colombia’s PACES programme, involving the provision of vouchers to lower the cost of attending private schools, is one of the few on school vouchers that includes child labour impact.97 The results indicate that the programme did not affect the likelihood of engaging in work of either boys or girls, but that the number of hours worked by girls decreased significantly.

Extending school access

There is large body of evidence linking improved school access with reduced child labour (e.g., Bangladesh, in rural Côte d’Ivoire, Ghana, Yemen, Morocco, and Cambodia).98 The impact of school access appears especially strong for girls. In Guatemala, for instance, distance to primary school has an influence on girls’ time allocations but not on those of boys.99 Each ten additional minutes of travel time to primary school decreases the probability of a Guatemalan girl attending school by 2.4 percentage points and increases her probability of performing household chores by 2.2 percentage points. Evidence from Morocco, Yemen, and Guatemala also points to an important gender dimension to the issue of school access.100

Why is school access important? Both economic and cultural considerations are likely important. Long travel distances to school can translate into high transport costs and a significant time burden, both raising the economic price of schooling. Families may also be reluctant to send their children, and especially their daughters, to schools far from home due to concerns about girls’ mobility in the public space.

Many children, particularly in rural areas, are unable to proceed in school beyond the primary level for the simple reason that post-primary schools are not available, leaving them little alternative to premature entry into work. Studies suggest that even when school access constraints are limited to higher levels of schooling, they can be part of the reason why primary-aged children work rather than attend school (e.g., in Tanzania, Ghana, and Vietnam).101 The most common explanation for this finding is that returns from education tend to be much higher for secondary than for primary schooling. Parents therefore have an incentive to send their children to primary school rather than to work if they know that their offspring will also have access to secondary education, where the seed of the initial investment in education begins to bear fruit.

Increased investment in expanding educational opportunities also appears to have an important intergenerational impact. A longitudinal study of the experiences of Brazil and Mexico in reducing child labour indicates that long-term changes in adult education levels, driven by substantial investments in education starting in the 1970s and 1980s, were critical. As the younger and more educated generation of Brazilian and Mexican parents...
began to have school-aged children, this apparently induced a substantial reduction in the number of children sent to work, perhaps because of these parents’ greater awareness of the benefits of education and dangers associated with child labour. This result, it should be noted, is net of the effect due to the fact that better-educated parents are wealthier and therefore less in need of their children’s labour.102

While we know that children become available for child labour when there is no school available, better school access does not always translate into reduced levels of child labour. In some cases, attendance gains resulting from improved access come from “inactive” children (i.e. those neither in school nor in employment) more than from children in child labour (e.g. in Tanzania,103 and some sub-groups in Yemen,104 Morocco,105 and Cambodia106). And in at least one instance, nearer schools and the resulting shorter journey times may have freed additional children’s time for greater involvement in work.107 This suggests that the decision to send children to work cannot always be reversed simply by improving school access. Nonetheless, school proximity seems to matter, especially for girls, and appropriate targeting of school construction can go a long way in generating the conditions for children to leave work for school.

Also important is the amount of time each day that children have access to schooling. The school day should be of sufficient duration to reduce the possibility that children work after school. Access to after-school programmes and extra-curricular activities can be important in this regard by providing parents with alternatives to work for their children outside of official schooling hours. In Brazil, for instance, a conditional cash transfer programme that included a mandatory after-school programme108 had a much larger impact in terms of reducing child labour compared to an otherwise similar programme than did not include the after-school component,109 suggesting that the extended school day associated with the former programme was instrumental in keeping children out of work.

Improving school quality

While access to schooling clearly matters, in many countries it is only a part of the problem. Greater access needs to be complemented by policies to raise school quality, the relevance of which to child labour is theoretically well established. The allocation of children’s time across different activities depends, among other things, on the relative returns of such activities. To the extent that school quality affects returns from education, it influences household decisions concerning investment in children’s education.

Simple correlations between available indicators of quality and child labour provide an initial suggestive picture of how the former affects the latter. As illustrated in Figure 13a, there is a clear and negative correlation between child labour and the level of public expenditure on primary education. Overcrowding in the classroom also appears relevant. The percentage of working children rises as the number of students per teacher increases (Figure 13b). Feedback from out-of-school children also points to quality concerns. In countries such as Tanzania, Ghana, and Ecuador, for instance, out-of-school children cite lack of interest in school as an important motive, a response likely driven in important part by negative perceptions of school quality and relevance.110

This evidence suggests that factors that compromise education quality can play a role in pushing children into child labour. It follows that policies designed to raise education quality are an important part of the solution to child labour. Empirical evidence also bears this out. A study covering Cambodia and Yemen, for instance, indicates that the impact of improved school quality on reducing child labour is significant even when compared to the impact of expanded school availability.111 In Mexico, the impact of a specific school quality improvement programme (CONAFE112) shows that quality enhancement can be an effective strategy for both encouraging schooling and
FIGURE 13: Inputs to educational quality and child labour, female children

Source: ILO calculations based on data from UNESCO Institute of Statistics (accessed October 2017)

Factors that compromise education quality, such as low public expenditures or crowded classrooms, can play a role in pushing children into child labour.

discouraging children’s work, especially for children of secondary school age, and even when enacted alongside a major demand-side programme like Progresa.\(^{113}\)

Raising school quality requires as a first step an investment in quality teaching through national teacher policies adopted in consultation with stakeholders. Quality teachers are one of the most important factors in achieving education outcomes, and clear policies on training, recruitment, deployment, and decent working conditions for teachers are essential for developing the workforce that can provide quality education.\(^{114}\) Recruiting well-trained teachers and teacher assistants from the local community and ensuring gender balance in the teaching corps can help encourage girls to attend school. Involving parents more directly in the life of the school can also produce important quality benefits at minimal cost.

And protection of all children, girls and boys, against violence, including sexual violence at school, is a human rights obligation in its own right. Schools must be safe places for children if students are to stay the course and complete at least compulsory education. Moreover, buildings must be able to protect children against natural disasters.

Not to be underestimated are the challenges facing teachers — and teacher recruitment and retention — often most especially in isolated rural areas. The ILO has been party, with UNESCO, to the joint Committee of Experts on the Application of the Recommendation concerning Teachers (CEART) since its inception. It tackles, among other things, working conditions, academic freedom, violence affecting teachers, teacher migration and mobility, and institutional independence.

Just as the parents of children in child labour need secure and decent work if the root causes of child labour are to be addressed, so also does quality education for all children require decent work for teachers and other education personnel.
Education and the future of work

Even with the vast backlog of deficits in education access and quality that must be overcome to ensure quality education for all children, it is also timely, given the ILO’s Future of Work Centenary Initiative, to ask questions about the future of education in the context of a changing world of work. Technological innovation, changing production modes, and economic restructuring are just some of the global forces that are causing fundamental shifts in the nature of work. The prospect of one lifelong job in one enterprise using one set of vocational skills, a pattern that was prevalent in a number of industrialized countries for several decades, is increasingly a thing of the past.

These changes have profound implications for the education and skills needs of tomorrow’s school leavers. Flexible skills and lifelong learning that are conducive to what we have called “lifelong employability” are growing in importance. But the changing world of work is also placing increased focus on the wider purpose of education. Education needs to remain relevant in a world in which many of today’s children, when they grow up, may not have productive work as has long been understood.

| TABLE 5: Policy options for strengthening education as an alternative to child labour |
|-----------------------------------------------|-----------------------------------------------|
| **Policy goal/targets**                       | **Strategies and measures**                   |
| **Expanded access to early childhood development opportunities for vulnerable households** | Targeted introduction/expansion of local centre-based preschool programmes.  |
| | Targeted introduction/expansion of home outreach programmes on better parenting and care-giving. |
| | Targeted introduction/expansion of comprehensive early children care programmes. |
| **Reduced direct and indirect schooling costs** | Elimination of school fees.                   |
| | Provision of free uniforms and textbooks.   |
| | Provision of free school transportation.    |
| | Introduction of conditional cash transfer programmes. |
| | Introduction of in-kind transfer schemes, including food for education schemes. |
| **Improved school quality**                   | Address teachers’ working conditions, academic freedom, violence affecting teachers, teacher migration and mobility, and institutional independence. |
| | Recruit well-trained teachers and teacher assistants from the local community, and ensure gender balance in the teaching corps to help encourage girls to attend school. |
| | Promote the involvement of parents and communities in the life of the school. |
| | Ensure the protection of all children, girls and boys, against violence, including sexual violence, at school. |
| | Curriculum reform aimed at improving relevance. |
| **Expanded school access**                    | Targeted school and classroom expansion based on needs assessment (including of children with learning difficulties or with physical disabilities). |
| | Expanded schooling hours and after-hours activities as an alternative to child labour. |
Addressing child labour in supply chains

THE RATIONALE

While global supply chains can be an “engine of development” — promoting technology transfer, new production practices, and a way for enterprises to move into higher value added activities bringing increased productivity, skills development, and enhanced competitiveness — failures of governance at all levels within global supply chains have contributed to decent work deficits, and the presence of child labour in some global supply chains is acute in their lower segments.115

Research on child labour has been conducted in a number of supply chains such as cocoa and tobacco, at times following media reports exposing child labour in supply chains. However, to date it has not been the subject of systematic, quantitative research covering all major affected supply chains. While reliable numbers are therefore difficult to come by, it is safe to say that the issue of child labour in supply chains extends to most sectors and most regions of the world. Beyond child labour in high profile global supply chains, many children in child labour are also found in supply chains producing for local and national consumption, where there is often even less — or no — scrutiny and oversight.

With the recent updates to the ILO Tripartite Declaration of Principles Concerning Multinational Enterprises and Social Policy (MNE Declaration) and the OECD Guidelines for Multinational Enterprises, and most recently the adoption of the UN Guiding Principles on Business and Human Rights, there is now broad international consensus on both the need to address child labour and other violations of fundamental labour rights in global supply chains and on the guiding principles and standards for doing so. This consensus was further strengthened with the G20 Leaders Declaration issued in 2017, which states “We will work towards establishing adequate policy frameworks in our countries such as national action plans on business and human rights and underline the responsibility of businesses to exercise due diligence. We will take immediate and effective measures to eliminate child labour by 2025, forced labour, human trafficking and all forms of modern slavery”.

In parallel, there has been a surge of regulations adopted by governments requiring companies to conduct due diligence in their supply chains. As a result, global business has come under increasing pressure to demonstrate respect for human rights, including children’s right to be free from child labour. But serious governance gaps, including inadequate enforcement of laws against child labour and forced labour, the widespread absence of effective systems of labour relations — often fuelled by policies and practices that seek to deny the right of freedom of association and collective bargaining — as well as widespread informality, present formidable challenges to businesses seeking to ensure that their supply chains are free of forced and child labour. At the same time, for public authorities, the challenge of effectively monitoring and enforcing national laws, already significant in the face of limited resources and capacity, is compounded by complicated subcontracting arrangements and labour supply chains crossing national jurisdictions.

POLICY APPROACHES

Addressing root causes — area-based approaches

Progress in addressing child labour in global supply chains — as with child labour generally — depends firstly on addressing the factors leading households to involve their children in work. This in turn brings the discussion back to the preceding sections of this chapter. Better social protection is needed to avoid a reliance on child labour as a negative household coping mechanism. Access to free and good
The Child Labour Platform is the leading cross-sectoral initiative to tackle child labour in supply chains. Co-chaired by the International Organisation of Employers and the International Trade Union Confederation, with affiliates in 150 and 156 countries, respectively, it is a forum for exchange of good practice globally, and direct action locally. It is part of the ILO’s contribution towards business engagement under Alliance 8.7.

The Child Labour Platform provides concrete solutions for buyers, factory owners, and suppliers by supporting member companies through a comprehensive process of due diligence. This includes support for embedding strong policies and good business practices, measuring impact, and engaging in meaningful dialogue with workers’ organizations and other stakeholders.

With complex and geographically diverse supply chains becoming the norm for global companies, the business risks from failing to address child labour in supply chains are escalating. Major scandals now break routinely with enormous costs to business. In these circumstances, there is both a strong ethical and business case to act and there is no more authoritative global body on the issue than the ILO.

The main activities of the Child Labour Platform include:

1. Hosting regular in-person meetings and webinars, and engaging with member companies in frank discussions on practical approaches to tackling child labour in supply chains, including cocoa, seafood, apparel, forestry, and telecommunications. With meetings held under the Chatham House Rule, companies save time and money by learning from each other about what works.

2. Developing innovative company collaboration models to tackle child labour in specific geographic zones and industries.

3. Producing practical guidance for child labour due diligence and good practice reports.

4. Assisting member companies in improving company policies and practice in light of the ILO child labour Conventions and UN Guiding Principles on Business and Human Rights.

5. Training members in the use of easy-to-replicate materials that convey essential messages on the identification, prevention, and remediation of child labour in supply chains.

6. Connecting members with ILO initiatives to prevent and remediate child labour in sourcing countries.

7. Ensuring members are up to date on emerging trends, risks, and issues through regular alerts.

quality education at least until the minimum working age is critical to providing households with a worthwhile alternative to child labour for their children. Expanding decent work opportunities for adults is vital for ensuring adequate livelihoods and providing income security without resorting to children’s labour. “Formalizing” production in the informal economy and ensuring fundamental labour rights, including freedom of association and freedom from discrimination, are critical to broader efforts towards decent work.

A recognition that there is a common set of root causes of child labour is the logic behind area-based approaches for addressing child labour in supply chains. **Rather than focus specifically on supply chains, area-based approaches address factors driving all types of child labour in a given geographic area. This broader approach helps prevent children simply moving from one supply chain to another, or into a more hidden form of child labour.** It is also consistent with government policies and commitments under ILO child labour Conventions, which are not limited to child labour within a specific sector.

The number of industries and enterprises adopting an area-based approach is on the rise, and this is a positive sign for the future. While individual enterprises and groups of enterprises may start from particular concerns they have about the use of child labour in specific products in their supply chains, there is nonetheless increasing recognition that child labour should not be displaced from one type of work or product to another and that sustainable solutions require the deployment of integrated area-based approaches in which the goal is to support the creation of child labour-free communities.

The child-labour free community approach is not restricted to the global supply chains of multinational enterprises. It has been deployed through similar strategies with other names such as “child-friendly villages” in Africa and South Asia and could be replicated on a wider scale.

**Strengthening regulation and enforcement**

The establishment and enforcement of an adequate regulatory framework is critical to the creation of an enabling environment for addressing child labour in supply chains and, more broadly, to ensuring sustainable supply chains. Such a framework should clearly establish the expectation that all business enterprises domiciled in the national territory or jurisdiction respect human rights throughout their operations. It should be part of a coherent policy approach designed to ensure that investment treaties and corporate governance law enable, rather than hinder, business respect for these rights. Governments can also play an important role in promoting and guiding business enterprises on means of compliance. Governments themselves can set a good example by taking extra steps to conduct due diligence against child labour and other labour rights abuses by business enterprises that are owned or controlled by the State and in their own public procurement activities.

Establishing adequate means of enforcement is also critical. Labour inspection services everywhere still need greater resources — and in some cases, capacity — to fulfil their essential role of transposing the authority and obligations of the State into practical measures to ensure prevention, enforcement of the law, and protection of adults, youth, and children in the world of work.

**Promoting industry compliance**

Translating the international frameworks and national regulations into concrete progress against child labour in global supply chains will require continued support to industry in meeting its compliance responsibilities. Several promising models for intervention have emerged in recent years, offering an important foundation and guidance for future efforts in this regard.
Part 2. Identifying a policy response to child labour

**International Framework Agreements.** Of relevance are the increasing number of global framework agreements between multinational enterprises and sectoral global trade union federations, which include all fundamental rights at work. These agreements rely on the ILO’s principal means of action — social dialogue between those that represent the economic actors — for their effectiveness, and they reflect the integrated deployment of all fundamental rights at work to combat both the symptoms and the root causes of child labour.

**Industry-wide collaboration initiatives.** Business-led, voluntary initiatives focused on child labour in supply chains demonstrate the value of industry-wide collaboration to ensure a level playing field in which child labour in supply chains is not a source of competitive advantage. Prominent examples include the International Cocoa Initiative and the Eliminating Child Labour in Tobacco Growing Initiative. The International Cocoa Initiative, for example, works with the cocoa industry in Côte d’Ivoire and Ghana — alongside civil society, farmers’ organizations, communities, and the national governments — in addressing child labour in the cocoa supply chain as part of a broader holistic approach to child protection.

**Cross-industry collaboration initiatives.** Cross-sectoral cooperation between industries takes such collaboration a step further to ensure that when child labour is addressed in one supply chain it is not simply displaced into another. This cross-sectoral collaboration can be especially useful in accelerating progress deep in supply chains in the informal economy, where monitoring and follow-up can be a particular challenge. One prominent example is the ILO-UN Global Compact Child Labour Platform as mentioned above.116 The Platform facilitates the exchange of experience and know-how and promotes cross-industry collective action to tackle child labour in supply chains.

**Public-private partnership.** Public-private partnerships help promote more effective interaction between private compliance initiatives and public enforcement activities, which too often are disconnected, resulting in fragmentation and inefficiency. They address the urgent need for remedy while at the same time laying the foundation for improved governance and enforcement. The public-private partnerships established in the cocoa-growing areas of Ghana and Côte d’Ivoire represent a successful example. These partnerships saw the cocoa industry work with the governments and the ILO to reduce reliance on child labour by improving yields and agronomy practices and at the same time to strengthen enforcement by introducing national child labour monitoring systems.

**Multi-stakeholder engagement.** The issue of child labour in global supply chains concerns a variety of parties — government, industry, international buyers, employers’ and workers’ organizations, and civil society — and bringing these parties together to identify and coordinate actions can be critical to their ultimate effectiveness and sustainability. The importance of such additional measures by enterprises to fulfil their obligations has been enhanced by the UN Guiding Principles on Business and Human Rights. Voluntary measures are neither a substitute for the rule of law, nor for social dialogue, and should be deployed responsibly to support both the obligations of States to ensure that the rule of law “protects” and the realization of the fundamental rights of freedom of association and the right to collective bargaining, which are the bedrock of well-functioning labour relations systems.
Protecting children in situations of fragility and crisis

THE RATIONALE
Globally, more than 1.5 billion people live in countries that are affected by conflict, violence, and fragility. At the same time, each year disasters affect around 200 million people, a third of whom are children — figures that are likely to grow in the future. These fragile situations — characterized by income shocks, a breakdown in formal and family social support networks, migration, and disruptions in basic services provision — create the conditions for further violations of fundamental labour rights, including an elevated risk of child labour. We know from a large body of research that households can use their children’s labour as a coping mechanism in situations of heightened vulnerability.117 We also know that children, once pulled out of the classroom to work, often do not go back to school, so that even short-term crises can have enduring adverse consequences for children.

In view of these facts, it is not surprising that there is a correlation between child labour and state fragility. The Fragile States Index (FSI) produced by the Fund for Peace (FFP) is a tool for measuring the array of social, economic, and political pressures contributing to state fragility.118 As shown in Figure 14, there is a strong correlation between fragility and child labour. States that are more fragile, in other words, tend to have higher levels of child labour than States that are more stable.119

There is a strong positive correlation between state fragility and child labour.

**FIGURE 14: Fragile States Index (FSI) and child labour, children aged 5-14 years, multiple countries**

The link between child labour and situations of armed conflict appears especially strong. An analysis of child labour data for countries listed in the Report of the Secretary-General on Children and Armed Conflict (S/2015/409), submitted to the UN Security Council in 2015, indicates that the share of children in employment, child labour, and hazardous work is significantly higher in countries affected by armed conflict than global averages. As reported in Figure 15, the incidence of child labour in countries affected by armed conflict is 77 per cent higher than the global average, while the incidence of hazardous work is 50 per cent higher in countries affected by armed conflict than in the world as a whole. The Syria crisis represents one of the most tragic contemporary examples of this link. A recent ILO study of Syrian refugees in Jordan shows poor Syrian children are much more exposed to child labour than are their Jordanian peers. Other studies also suggest that the Syria crisis is associated with an alarming rise in child labour.

Natural disasters are also associated with an increased risk of child labour. A qualitative study undertaken by ILO Sri Lanka points to the link between child labour and natural disasters such as drought, floods, and landslides. The study, which focused on three Districts that have been affected by recurrent natural disasters, also indicates a greater risk of permanent school dropout and a major deterioration of school quality as a result of disasters. Numerous other studies, for example, in Guatemala and Cambodia, also indicate an increase in child labour as a result of natural disasters and related shocks.

**POLICY APPROACHES**

**Mainstreaming child labour concerns in all phases of humanitarian action**

Child labour must be treated as a priority in crisis preparedness and contingency plans, humanitarian responses, and in post-crisis reconstruction and recovery efforts. Governments, workers’ and employers’
Ending child labour by 2025: A review of policies and programmes

organizations, and humanitarian actors all have a critical role to play in this context. Rapid assessment tools need to be regularly updated in evolving and increasingly complex crises to quickly determine the risks of child labour and other fundamental labour rights violations. At the same time, new intervention models need to be developed and tested to address child labour in crisis or in fragile situations and to strengthen protection and remedies for children and other affected groups. The Child Labour in Emergencies Toolkit produced by the Child Labour in Emergencies Task Force, co-chaired by ILO and Plan International, represents an important resource in this regard.24

Building on national systems

Humanitarian responses addressing child labour should, to the greatest extent possible, engage public authorities and build upon existing national systems. Parallel systems targeting only those communities affected by the crisis, with minimal involvement of the actors who have traditionally taken the lead on the issue of child labour (e.g., ministries of labour and agriculture and employers’ and workers’ organizations), tend to be difficult to reconcile with time and to contribute less to post-conflict recovery and development.

In instances where the children concerned are refugees or internally-displaced persons, effectively building on national systems is contingent on agreement from state authorities to accommodate these groups of children within national systems. The ILO’s Employment and Decent Work for Peace and Resilience Recommendation, 2017 (No. 205) acknowledges that such accommodation should be within the limits of national resources and capacity and with acknowledgement on the part of the international community of the importance of equitable burden- and responsibility-sharing.125

Collective efforts and coordination

The complexity of crisis and fragile situations, and the many overlapping mandates for responding to them, means that ensuring close coordination around the issue of child

FIGURE 15: Percentage of children aged 5-17 in employment, child labour, and hazardous work globally and in countries affected by armed conflict

Note: countries classified as “affected by armed conflict” are taken from the Report of the Secretary-General on children and armed conflict, submitted to the UN Security Council in 2015. The category “countries affected by armed conflict” includes Afghanistan, the Central African Republic, Colombia, Iraq, Mali, Nigeria, the Philippines, South Sudan, Ukraine, Yemen, and the Democratic Republic of the Congo. Countries affected by armed conflict for which child labour data is not available in the current Global Estimates include Libya, Myanmar, Somalia, Sudan, and the Syrian Arab Republic.
labour is another important priority. There are a number of existing mechanisms, including the Inter Agency Standing Committee, the Paris Principles Steering Group on children associated with armed forces and groups, the Child Labour Task Force of the inter-agency Alliance for Child Protection in Humanitarian Action, and the Global Partnership to End Violence against Children, that are relevant in this context. Alliance 8.7’s Action Group on Conflict and Humanitarian Settings also provides an important vehicle for collaboration around protecting children from child labour in situations of fragility and crisis. While these multiple mechanisms and forums are playing important roles, careful attention must be paid to their respective mandates so that each addresses elements of the response for which it is most competent.

Collaboration among development and humanitarian actors in addressing child labour also needs to be made more effective and rapid in emergencies with the aim of ensuring that short-term emergency measures are consistent with, and help support, longer-term efforts to combat child labour.

**Link to livelihoods**

The sudden loss of livelihoods and heavy economic burdens faced by families in crisis situations can make them extremely vulnerable to child labour. It is therefore important to ensure that recovery efforts in emergencies not only address immediate child protection needs but also provide opportunities to support children and families in rebuilding their livelihoods.

Protected children from child labour in emergencies: Child Labour Task Force of the Alliance for Child Protection in Humanitarian Action

The Child Labour Task Force,126 co-led by Plan International and the ILO, was formally re-established in March 2017 under the Alliance for Child Protection in Humanitarian Action.

The Task Force seeks to address the widely recognized need to improve responses to child labour in emergencies.127 Its overall goal is to ensure practical coordination and collaboration on the issue of child labour among humanitarian responders and development actors at all levels. It also is a vehicle for ensuring child labour concerns are effectively “mainstreamed” in emergency preparedness plans, prevention efforts, emergency responses, and in humanitarian standard setting.

Specific taskforce objectives include:

1. **Technical tools and guidance.** Humanitarian responders have access to and use inter-agency guidance to prevent and respond to child labour in emergencies with a specific focus on its worst forms.

2. **Capacity building.** Humanitarian responders have enhanced knowledge, skills, and behaviours to prevent and respond to child labour in emergencies with a specific focus on its worst forms.

**continued on next page**
and lead to child labour as a negative coping mechanism, and this link between child labour and economic vulnerability is especially apparent in conflict and disaster situations. The sooner affected populations are given access to livelihoods the more effectively child labour can be prevented and addressed. The ILO’s Recommendation 205 emphasizes the importance of ensuring livelihoods in crisis situations and provides a framework for actions in this regard. Based on a coordinated and inclusive needs assessment with a clear gender perspective, the Recommendation calls for “immediate employment measures and income-generation opportunities for population groups and individuals who have been made particularly vulnerable by the crisis”.

With the global population of forcibly displaced persons exceeding 65 million — a significant percentage of them refugees who have moved to another country — addressing the legal and regulatory impediments facing refugees in accessing the labour market and gaining decent work in host communities is of particular importance. ILO Recommendation 205 calls for measures to “promote the access of refugees to formal job opportunities, income-generation schemes and entrepreneurship, by providing vocational training and guidance, job placement assistance, and access to work permits, as appropriate, thereby preventing informalization of labour markets in host communities.” These measures should take place as part of broader efforts to build the resilience and strengthen the capacity of host communities by investing in local economies and promoting full, productive, freely chosen employment and decent work, and skills development of the local population.

**Children in armed conflict**

Some of the most egregious violations of children’s rights occur in contexts of armed conflict. **Children in conflict zones are recruited as combatants, used as human shields, sexual slaves, and suicide bombers, or forced to commit acts of extreme violence. In addition, they may be forced to perform extremely hazardous child labour in the**
production of conflict minerals. All of these horrific violations continue to be practiced with impunity in many situations of armed conflict. More attention is urgently needed to these worst forms of child labor. Efforts should be made to ensure that children associated with armed forces and groups, and other children caught up in armed conflict, are prioritized in peace plans and processes and in demobilization efforts. Special advocacy efforts directed towards armed groups and aimed at the release of these children must also continue.

ILO Recommendation 205 also calls for specific youth employment components in disarmament, demobilization, and reintegration programmes. Providing sustainable work opportunities for young people of legal working age formerly associated with armed forces and armed groups can be critical to their successful reintegration into society. The provision of psychosocial counselling and other interventions to address anti-social behaviour and post-traumatic stress is also vital in many instances.

### TABLE 7: Policies to protect children from child labour in situations of state fragility and crisis

</table>
Achiving a world free of child labour remains as urgent today as ever. But our pace must be faster and our efforts more ambitious if we are to make such a world a reality. The latest estimates indicate that 152 million children are still engaged in child labour, accounting for almost one in ten of all children worldwide. The global community has clearly acknowledged that the persistence of child labour in the 21st century is unacceptable and has renewed its commitment in the Sustainable Development Goals (SDGs) to eliminate all forms of child labour by 2025 (SDG Target 8.7). Now we must turn this renewed commitment into accelerated action and consign child labour to the dustbin of history, once and for all.
A growing consensus to address child labour through an integrated rights-based approach

The extensive body of knowledge and experience reviewed in the previous chapters of this report underscores the importance of an active policy response to child labour and sheds important light on the contents of such a policy response. Measures in four main policy areas — legal standards and regulation, labour markets, social protection and education — underpinned by social dialogue, emerge from this review as especially important pillars of a policy response to child labour. These pillars for addressing child labour are linked not only to SDGs on poverty eradication, quality education, and decent work (SDG Goals 1, 4, and 8, respectively), but also to the struggle to achieve and maintain “peaceful, just, and inclusive” societies — an integral and foundational element of the 2030 Agenda.

The rationale for each of the four pillars is straightforward. International standards and national labour laws and regulations articulate and formalize the State’s duty to protect its children. They set out an unambiguous definition of child labour and the principles and framework for national action against it. Properly designed labour market policies focused on where most children in child labour are found — the rural economy and the informal economy — can help curb the demand for child labour and improve the prospects for decent work for youth of legal working age and for adults. Social protection helps prevent households from having to rely on child labour as a negative coping strategy in the face of poverty and economic uncertainty. Quality education helps break intergenerational cycles of poverty and child labour reliance and provides a worthwhile alternative to child labour.

The increasingly wide consensus concerning these main pillars has developed over the years, in particular since the 2008-2012 period, during which the greatest acceleration of progress was achieved since the ILO began collating global statistics. Taken together, they reflect a major shift towards more coherent and integrated policy approaches directed to systemic change and the eradication of root causes. They also reflect a recognition that child labour cannot be effectively addressed in narrow sectoral terms as an isolated issue or through limited-scale project-based approaches, but rather must be viewed as an integral part of broader economic and social development policies.

Addressing child labour is critical to the achievement of broader social development goals, which in turn is critical to addressing child labour. Policies need to reflect this interrelationship.

The implicit recognition of the limits of enforcement also underpins this emerging consensus. Raid and rescue approaches have a place in the right circumstances and at the right time; however, with 152 million children in child labour, most of them performing unpaid contributing work in their own families, it is essential that adequate resources are devoted to combating the root causes of child labour. Enforcement must also be directed appropriately and not further harm the children or penalize parents and families who are themselves victims of poverty, inequality, and social exclusion.

The consensus around a common set of policy priorities does not and cannot mean that there also exists a common set of measures for addressing child labour that are equally applicable everywhere. In other words, there is no one-size-fits-all approach to addressing child labour. Rather, the specific measures that make up policy responses need to be tailored to the variety of contexts in which child labour persists, based on social dialogue at the national and local level and on the policy building blocks already in place. These contexts include situations of state fragility and armed conflict, in which a large share of children in child labour is found, natural disaster related to climate change, widespread economic informality, and the contexts of global supply chains. Each of these presents its own special challenges in terms of protecting children from child labour.
Progress in the ratification of the two principal ILO legal standards relating to child labour has been dramatic. ILO Convention No. 182 (on the worst forms of child labour), with 181 ratifications, is the most rapidly and most ratified Convention in the history of the ILO. More than 99.9 per cent of the world’s children aged 5-17 years are now covered by it. Convention No. 138 (on minimum age), with 170 ratifications, now covers 80 per cent of the world’s children.

But the challenge of creating an adequate legal architecture for addressing child labour does not end with ratification. Transposing these international standards into national laws and regulations is also critical. We noted earlier in this report that important progress has been made in this regard but that important challenges remain. Incoherencies, for example, persist in a number of countries between laws governing the minimum age for admission to employment and those dealing with the age range for compulsory schooling. Many countries have also been slow in honouring their commitment made upon ratification of ILO Conventions Nos 138 and 182 to publish or review national lists of hazardous work prohibited to people under 18 years of age. Labour inspection systems remain generally weak, owing to both capacity and resource constraints, and rarely reach workplaces in the informal economy where most child labour is found.

On a broader strategic level, while there has been a growing understanding of the complementarity of the two child labour Conventions, ensuring an integrated approach to their application remains a challenge in many countries. This requires, first and foremost, a recognition that the priority of combating worst forms of child labour does not override the need to continue to combat child labour involving those who are not in hazardous work or other worst forms. An integrated approach to the application of the two child labour Conventions, recognized and reinforced in the Brasilia Declaration, is crucial to ensuring the human rights of all children to be free of child labour and to have access to free, quality education; it is also crucial to avoid the displacement of children below the minimum age from worst forms to “non-worst” forms.

More progress is also needed in integrating the application of child labour laws with those relating to other fundamental labour rights, in keeping with the 1998 ILO Declaration on Fundamental Principles and Rights at Work and reinforced by the 2008 Declaration on Social Justice for a Fair Globalization and the 2012 and 2017 ILO Conference resolutions on Fundamental Principles and Rights at Work. These instruments proclaim, more clearly than ever, that eliminating all forms of child labour also requires the realization of the other fundamental rights: of freedom of association and the right to bargain collectively, and freedom from forced labour and from discrimination in the world of work. This integrated fundamental principles and decent work approach is also reflected in the 2030 Agenda for Sustainable Development.

Labour market policies to promote decent rural livelihoods and address the informal economy

The Global Estimates indicate that most children in child labour work unpaid on family farms or in other family enterprises. Typically, they do so because the family depends on the additional income that their work generates or because the family enterprise depends on their work in order to function. These basic facts underscore the importance of improving rural livelihoods and incomes, along with the functioning of small family farms and enterprises, in order to reduce family dependence on child labour. Alongside the need for fair pay for waged work to redress the family poverty gap, family enterprises need fair prices for what they produce. And those that are “functionally dependent” on the unpaid work of their children in order to perform all the tasks required for the enterprise to operate also
need to become viable enough to replace the unpaid labour of their children with adults and youth of working age in decent work and/or with appropriate labour-saving technologies.

We also know that child labour is concentrated in the informal economy — both urban and rural — and is closely related to working conditions there. Workers in the informal economy commonly face the denial of rights at work, including the right to organize and bargain collectively (and thus also face a lack of wider social dialogue), limited or no assurances of occupational safety and health, and inadequate social protection, all of which run contrary to the concept of decent work and increase the likelihood that working households must rely on their children’s child labour as a negative coping strategy. Labour market policies promoting the transition from the informal to the formal economy — many of which overlap with efforts to improve rural livelihoods — are therefore also critical in the fight against child labour.

Promoting the self-organization of women and men who earn their living in the informal urban and rural economies is also critical to furthering this transition. In addition to wage workers, who need to be able to exercise their rights to freedom of association and collective bargaining, this group also includes, for example, own-account workers, smallholder farmers, and artisanal fishers. Several innovative approaches have proven effective, not least among domestic workers, who now have an international federation of their trade unions. Widening the collective, representative voice, sometimes also through the establishment of cooperatives, enables those who are not in employment relationships with an identifiable employer to influence their working conditions, productivity, and incomes. At the community level, too, it can help strengthen the “village voice” in dealings with public authorities, for example, about the provision of public service obligations, including education for all.

Building and extending social protection systems, including floors

Social protection measures that seek to provide income replacement and security to families that are dependent for part of their family income on the labour of their children have proved successful and must be extended. The ILO Social Protection Floors Recommendation, 2012 (No. 202) provides a key framework for achieving this. We saw earlier that cash transfer schemes appear to hold particular promise in keeping children in school and out of child labour. However, social protection extends beyond cash transfers. There are a number of other instruments identified in the ILO Recommendation that need to be implemented in a way that enhances their capacity to address child labour. The more limited evidence concerning public employment programmes, social health protection, and unemployment protection to income security in old age are all potentially relevant within a well-designed social security system. Social finance schemes, such as microcredit and microinsurance, can also play an important complementary role in making sure that vulnerable families have access to the financial market and are able to hedge against part of the risks they face.

Design considerations are, however, critical in all of these areas. A key conclusion emerging from the evidence to date is that close attention must be paid to avoiding unintended negative consequences relating to child labour. Even in instances when some social protection instruments or complementary social finance schemes are achieving their broader social goals, they can increase child labour if they create new opportunities for children’s work in the family enterprise or if they lead to children undertaking work that would have otherwise been undertaken by adults in the household. This risk comes out most clearly in the initial evidence relating to the child labour impact of public employment programmes. Provisions, therefore, should be included in the design of social protection instruments and complementary social finance schemes to address possible unintended negative consequences regarding child labour.
Expanding access to free, quality public education

The latest Global Estimates indicate that the overall decline in child labour masks a stagnation of progress against child labour among children of primary school age. This means, simply, that the withdrawal of children from child labour is not being matched by the prevention of their entry into child labour in the first place. Ending entry of children into child labour requires a number of measures. Among them, most obviously, is to ensure that the 36 million children aged 5-14 engaged in child labour and not attending school are able to go to school, stay at school, and complete their education, and that the 78 million who are combining child labour and school are able to devote their childhood to their education and no longer have it undermined by child labour. To paraphrase the words of Nobel Peace Laureate Kailash Satyarthi, we will not end child labour until every child is in school, and we not will not succeed in ensuring every child is in school until we eradicate child labour.

This discussion points to the need for massive investment in what we know works in getting children out of work and into the classroom — or, better still, into preschool and primary school at the outset and preventing them from entering child labour in the first place. This includes ensuring a good start by promoting early childhood development, care, and primary education. It also includes offsetting the direct and indirect costs associated with schooling with measures such as abolishing school fees and providing cash transfers to poor families. Other priorities include ensuring a professional and competent teaching force with rights at work and decent working conditions; ensuring that all girls and boys have a safe and quality learning environment; and providing second-chance learning opportunities for older children who have so far missed out on formal schooling, including through targeted vocational training programmes that also offer basic education support. Ensuring coherence and enforcement of laws on child labour and school attendance, including coherence between the minimum age for work and the minimum school leaving age, as noted above, is critical.

At the same time, we must take into account that the “Fourth Industrial Revolution” will entail a vast restructuring of the global economy and of labour markets, which, in different ways, will affect working lives and the lives of children in all parts of the global economy. A narrow “business as usual” approach to school to work transition needs to be widened, not only to pay appropriate attention to transition from early childhood to school but also to an open and thoughtful debate about the purpose and nature of education — as a human right and as a preparation for a fulfilling adult life — in economies that, in the coming decades, may see a major decline in the availability of “jobs” as we commonly think of them today.

Addressing child labour in supply chains

Reliable numbers are difficult to come by, but we know that children in child labour are found in supply chains in most sectors and most regions of the world. Effectively addressing this issue will therefore also be critical along the road to 2025. Particularly important in this regard will be promoting the continued growth of integrated, area-based approaches on the part of enterprises seeking to ensure that their supply and value chains are free of child labour. This means supporting the creation of child labour-free communities in the areas where their supply chains operate, rather than approaches limited solely to the products they source or to worst forms of child labour. Such an approach takes into account that children performing child labour in their supply chains may also be engaged in child labour in other sectors — for example, combining child labour in agriculture with child labour in artisanal mining, in brick kilns, or in domestic work. The wider vision that underpins this approach also helps support the development of strategies to address child labour — often performed in the same communities, sometimes even by the same
children — relating to the production of goods for family and local consumption, which represents the majority of child labour in the world. Development assistance targeted only at internationally traded goods needs to be recalibrated to support integrated approaches aimed at realizing the human rights of all children in child labour.

A number of other strategies and models of intervention for addressing child labour in supply chains are also identified in this report. The establishment and enforcement of an adequate regulatory framework is critical to the creation of an enabling environment for addressing child labour in supply chains and, more broadly, to ensuring sustainable supply chains. Business-led, voluntary initiatives focused on child labour in supply chains demonstrate the value of industry-wide collaboration to ensure a level playing field in which child labour is not a source of competitive advantage. Cross-sectoral collaboration between industries takes this approach a step further to ensure that when child labour is tackled in one supply chain it is not simply displaced into another. Public-private partnerships help promote more effective interaction between private compliance initiatives and public enforcement activities. Too often, these efforts are disconnected, resulting in fragmentation and inefficiency. Finally, multi-stakeholder engagement recognizes the importance of bringing together all parties concerned — government, industry, international buyers, employers’ and workers’ organizations, and civil society — to the effectiveness of actions to rid supply chains of child labour.

**Child labour in situations of state fragility and crisis**

Major regional and national conflicts during the 2012-2016 period — as well as natural and climate change related disasters — have continued to dislocate economies and communities and destroy or diminish family incomes and livelihoods, and have created the greatest flows of refugees — including of children — that the world has seen for decades. According to UNICEF, an estimated 535 million children (almost one in four children) live in countries affected by conflict or disaster. Children also comprise more than half of the 65 million people presently displaced by war. Whether children affected by conflict and disaster are trapped in their home communities or on the move in search of safety and refuge, they are more vulnerable to child labour. Indeed, we saw earlier that there is a strong correlation between child labour and situations of state fragility and that the link between child labour and situations of armed conflict appears especially strong.

This report has identified a number of urgent priorities for addressing the risk of child labour in situations of state fragility and crisis. First and foremost, child labour concerns need to be integrated into all phases of humanitarian action — crisis preparedness and contingency plans, humanitarian responses, and post-crisis reconstruction and recovery efforts. Rapid assessment tools need to be regularly updated in evolving and increasingly complex crises to determine quickly the risks of child labour and other fundamental labour rights violations. At the same time, new intervention models need to be developed and tested to address child labour in crisis or in fragile situations and to strengthen protection and remedies. The complexity of crisis and fragile situations, and the many overlapping mandates for responding to them, means that ensuring close coordination around the issue of child labour is another important priority. Ensuring the livelihoods of families in crisis situations is essential to avoiding their reliance on child labour as a negative coping mechanism.
Some of the most egregious forms of child labour occur in contexts of armed conflict, and efforts should be made to ensure that children associated with armed forces and groups and other children affected by armed conflict are prioritized in peace processes and demobilization efforts and are provided necessary support for their reintegration into society. The ILO’s founding motto “if you want peace, cultivate justice” is more relevant than ever for the children affected by conflict and for every one of the 152 million of our children who are still in child labour.

**Building knowledge to guide action**

Filling key knowledge gaps on child labour, the forces underpinning it, and the best approaches for addressing it will be important to informing and guiding actions on the road to 2025.

The nature of the functional dependence of family enterprises on the unpaid labour of their children is an especially important knowledge gap. As 72 per cent of all child labour (and 85 per cent of child labour in Africa) is in agriculture and 69 per cent is performed as unpaid contributing family work, this is not a peripheral matter. If we are to have coherent and comprehensive policies to address the systemic root causes of child labour, a clearer understanding of the nature of that dependence, and of the support such enterprises require to be able to replace that child labour by adults engaged in decent work, is urgently required.

Although there are still fewer girls than boys in child labour and in hazardous work, the proportional decline among girls is now slower than among boys. In addition, girls’ work may still be undercounted and we need to improve our statistical research and measurement to capture better the child labour that girls, in particular, perform. That concerns, not least, our need to understand better the threshold at which household chores cease to be normal family activity for children and, because of their harmful effects on the child’s development, become analogous to child labour.

There is an ongoing need for information on the impact of policies and interventions in the child labour sphere. With the exception of cash transfers, too little is known about the effectiveness of interventions in policy areas of relevance to child labour. This knowledge gap, in turn, impedes policy development, makes it difficult to demonstrate to the international community that money invested has been well spent, and hampers future resource allocation decisions.

There is a general need for more knowledge about the implications for child labour of broader global challenges, including climate change, migration, inequality, and the future of work. We also need to know more about how child labour is linked to other violations of fundamental labour rights, including discrimination in the workplace and restrictions on freedom of association and collective bargaining. Better information on children in the worst forms of child labour other than hazardous work is another important continuing priority, building on the research work already undertaken in the field of child forced labour and utilizing the measurement tools already developed by the ILO and other groups for this purpose.

Some gaps also remain in child labour data and statistics, despite the large strides that have already been made. Data on child labour is now available for much of the less-industrialized world, but there is still a need in many countries to ensure the regularity and consistency of data gathering for the purpose of monitoring progress. The need for more and better data also extends beyond the less-industrialized world, as some middle-income countries have ceased to collect or publish data on work below the minimum working age and many high-income countries have never collected data on child labour, despite the fact that we know child labour persists in countries of all income levels.
In 2016, Alliance 8.7 was launched as a global partnership to end forced labour, modern slavery, human trafficking, and child labour, in accordance with SDG Target 8.7. Alliance 8.7 recognizes that no single actor can solve these challenges alone and that eradication can be accelerated only through efforts that leverage expertise across a wide range of stakeholders. The ILO has supported Alliance 8.7 since its inception and remains committed to working with like-minded partners to accelerate the eradication of child labour. It currently serves as the secretariat for Alliance 8.7 and, in that capacity, has supported a range of Alliance 8.7 meetings around the world. The ILO is working with Alliance 8.7 members across all four of the partnership’s goals: accelerating action towards compliance with the target, conducting research and sharing knowledge, driving innovation, and increasing and leveraging resources.

The ILO involvement with Alliance 8.7 is part of its broader commitment to partnership in efforts to end child labour and achieve related goals. Previous sections of this report have highlighted a number of other key partnerships in this context. The International Partnership for Cooperation on Child Labour in Agriculture brings together the United Nations Food and Agriculture Organization, the ILO, the International Fund for Agricultural Development, the International Union of Food, Agricultural, Hotel, Restaurant, Catering, Tobacco and Allied Workers’ Associations, and a variety of other organizations and stakeholders in global efforts to eliminate child labour in agriculture. The Social Protection Initiative of the ILO and the World Bank is aimed at promoting the shared vision of the two agencies of universal social protection to ensure that no one is left behind. The SDG-Education 2030 Steering Committee is the global multi-stakeholder coordination mechanism for education in the 2030 Agenda. The Child Labour Platform, co-chaired by the International Organisation of Employers and the International Trade Union Confederation, is a forum to tackle child labour in supply chains. Finally, the Child Labour Task Force of the Alliance for Child Protection in Humanitarian Action, co-led by Plan International and the ILO, is a response to the widely recognized need to improve responses to child labour in emergencies. The Global Partnership to End Violence Against Children also supports the elimination of child labour.

International development cooperation will continue to be critical to success in achieving child labour goals. In many countries, the cost of required action far exceeds available government resources, meaning that governments will not be able to achieve child labour targets if they are left to act unassisted. International development cooperation is therefore imperative within the spirit of Article 8 of ILO Convention No. 182. UN agencies, other multilateral and bilateral organizations, international non-governmental organizations, and a variety of other groups involved all have an important role to play in this regard. The returns on the investment in ending child labour are incalculable. Children who are free from the burden of child labour are able to fully realize their rights to education, leisure, and healthy development, in turn providing the essential foundation for broader social and economic development, poverty eradication, and human rights.
Ending child labour by 2025: A review of policies and programmes

© Lisa Kristine
Annex: Statistical concepts and definitions used in this report

Three main international Conventions — the UN Convention on the Rights of the Child and ILO Conventions Nos 138 and 182 — together set the legal boundaries for child labour and provide the legal grounds for national and international action against it. Resolution II concerning statistics of child labour approved in 2008 at the 18th International Conference of Labour Statisticians (ICLS) translates these legal standards into statistical terms for the purpose of child labour measurement. The statistical concepts and definitions used in this report are consistent with this ICLS resolution.
Children in employment are those working in any form of market production and certain types of non-market production (principally, the production of goods such as agricultural produce for own use). This group includes children in forms of work in both the formal and informal economy; inside and outside family settings; for pay or profit (in cash or in kind, part-time or full-time); and domestic work outside the child’s own household for an employer (paid or unpaid). It includes children who are engaged in child labour, as well as children above the relevant minimum age who are engaged in forms of work that are permitted for children of that age.

Children in child labour constitute a narrower category than children in employment. It excludes children in employment who are in permitted light work and those above the minimum age for work whose work is not classified as a worst form of child labour, or, in particular, as “hazardous work”.

Children in the worst forms of child labour are those in the categories of child labour set out in Article 3 of ILO Convention No. 182. These categories comprise: (a) all forms of slavery or practices similar to slavery, such as the sale and trafficking of children, debt bondage and serfdom, and forced or compulsory labour, including forced or compulsory recruitment of children for use in armed conflict; (b) the use, procuring, or offering of a child for prostitution, for the production of pornography, or for pornographic performances; (c) the use, procuring, or offering of a child for illicit activities, in particular for the production and trafficking of drugs as defined in the relevant international treaties; and (d) work which, by its nature or the circumstances in which it is carried out, is likely to harm the health, safety, or morals of children.
Children in hazardous work are those involved in any activity or occupation that, by its nature or the circumstances in which it is carried out, is likely to harm their health, safety, or morals. In general, hazardous work may include night work and long hours of work, exposure to physical, psychological, or sexual abuse; work underground, under water, at dangerous heights, or in confined spaces; work with dangerous machinery, equipment, and tools, or which involves the manual handling or transport of heavy loads; and work in an unhealthy environment which may, for example, expose children to hazardous substances, agents, or processes, or to temperatures, noise levels, or vibrations damaging their health. Hazardous work by children is often treated as a proxy category for the worst forms of child labour. This is for three reasons. First, reliable national data on the worst forms of child labour other than hazardous work, such as children in bonded and forced labour or in commercial sexual exploitation, are still difficult to come by. Second, children in hazardous work account for the overwhelming majority of those in the worst forms of child labour. Third, children in the three other worst forms of child labour are also commonly exposed to hazards likely to harm their health, safety, or morals.

Children in light work. According to Article 7 of ILO Convention No. 138, national laws or regulations may permit the employment or work of persons from 13 years of age (or 12 years in countries that have, as an interim measure, specified the general minimum working age as 14 years) in light work which is: (a) not likely to be harmful to their health or development; and (b) not such as to prejudice their attendance at school, their participation in vocational orientation or training programmes approved by the competent authority or their capacity to benefit from the instruction received. For the purpose of statistical measurement, in this report light work includes children 12-14 years old in employment who work in non-hazardous work for less than 14 hours a week.

Children performing household chores refers to those performing domestic and personal services for consumption within their own households. Household chores include caring for household members; cleaning and minor household repairs; cooking and serving meals; washing and ironing clothes; and transporting or accompanying family members to and from work and school. In more technical terms, these tasks constitute a “non-economic” form of production and are excluded from consideration in the UN System of National Accounts (UNSNA), the internationally agreed standard set of guidelines for measuring national economic activity, as well from the ILO Global Estimates of Child Labour. However, if such chores are performed for an excessive number of hours, in an unhealthy environment, involving unsafe equipment or heavy loads, or in dangerous locations, they may result in harm to the child that make them analogous to child labour.
Endnotes

4. Household chores refer to activities that are performed for and within one’s own household such as caring for siblings or sick, infirm, disabled, or elderly household members; cleaning and carrying out minor household repairs; cooking and serving meals; washing and ironing clothes; and transporting or accompanying family members to and from work and school. In more technical terms, household chores are defined as the production of domestic and personal services by a household member for consumption within their own household. They are a “non-economic” form of production and are excluded from consideration in the UN System of National Accounts, the internationally agreed standard set of guidelines for measuring national economic activity. For further information, see (a) ILO: *Unpaid household services and child labour, 19th International Conference of Labour Statisticians* (ILO, Geneva, 2013); and (b) Resolution II concerning statistics of child labour in ILO: *Report of the Conference, 18th International Conference of Labour Statisticians, Geneva, 24 November—5 December 2008. ICLS/18/2008/IV/FINAL* (ILO, Geneva, 2009).

5. See, for example, Duygu, M.: *Impact of Unpaid Household Services on the Measurement of Child Labour*, MICS Methodological Papers, No. 2, Statistics and Monitoring Section, Division of Policy and Strategy, (UNICEF, New York, 2013); and S. Lyon, M. Ranzani, and F.C. Rosati, *Unpaid household services and child labour, Understanding Children’s Work Project (UCW)*, working paper series, (Rome, 2013). It should be stressed, however, that there are no agreed legal or statistical norms governing work-hour thresholds in the measurement of household chores.

27 Ibid.

28 Minimum wages have been a recurrent subject at the ILO since its creation in 1919. Based on the view that “universal and lasting peace can be established only if it is based upon social justice”, the ILO Constitution called in its Preamble for an urgent improvement of conditions of labour, including “the provision of an adequate living wage”. In 1944, the ILO Declaration of Philadelphia referred to the importance of wage policies “to ensure a just share of the fruits of progress to all, and a minimum living wage to all employed and in need of such protection”. This was reiterated in the 2008 ILO Declaration on Social Justice for a Fair Globalization. The Minimum Wage Fixing Convention, 1970 (No. 131) calls for minimum wage levels that take into consideration both the needs of workers and their families as well as economic factors, and that are set after full consultation of social partners on an equal basis.

34 A recent learning package to support trade unions, employment services, education and training institutions, as well as youth organizations, in their initiatives aimed at raising young people’s awareness of their rights at work, see ILO: *Rights@Work 4 Youth: Decent work for young people: Facilitators’ guide and toolkit* (Geneva, 2014).

37 It is important to reiterate that Convention Nos 138 and 182 state that the specific types of employment or work constituting hazardous work are determined by national laws or regulations or by the competent authority. When countries ratify Convention No. 182 and Convention No. 138, they commit themselves to determining work to be prohibited to persons under 18 years of age. Article 4 of Convention No. 182 in this context says: “The types of work referred to under Article 3(d) [work which, by its nature or the circumstances in which it is carried out, is likely to harm the health, safety, or morals of children] shall be determined by national laws or regulations or by the competent authority, after consultation with the organizations of employers and workers concerned, taking into consideration relevant international standards, in particular Paragraphs 3 and 4 of the Worst Forms of Child Labour Recommendation, 1999.”

40 According to the ILO Social Protection Floors Recommendation, 2012 (No. 202), social protection floors constitute nationally-defined sets of basic social security guarantees, ensuring at least effective access to essential health care and basic income security throughout the life course, which secure protection aimed at preventing or alleviating poverty, vulnerability, and social exclusion.

41 This is reflected in SDG target 1.3 on the commitment to “implement nationally appropriate social protection systems and measures for all, including floors, and by 2030 achieve substantial coverage of the poor and the vulnerable.”

Ending child labour by 2025: A review of policies and programmes

57 The programme provided a quota of up to 30 days of work in labour-intensive projects (such as road and school construction) to individuals from selected beneficiary households residing in chronically food insecure areas. The program was complemented by other activities such as access to credit, agricultural extension services, irrigation, and harvesting schemes, among others. J. Hoddinott, D. O. Gilligan, and A. S. Tassesse: The Impact of Ethiopia’s Productive Safety Net Program on Schooling and Child Labour, Working Paper, 2009; and A. R. Quisumbing and Y. Yohannes: How fair is workfare? Gender, public works, and employment in rural Ethiopia, World Bank Policy Research Working Paper, 2005.

58 The programme providing a guarantee of up to 100 days of annual employment at the minimum wage rate in rural employment projects (e.g. road construction, water conservation, among others) suggested mixed effects for younger children (5-12 years) but significant ones for adolescents (13-16 years) who are old enough to substitute for adult labour but ineligible to participate in the programme. Shah, M. and B. Steinberg (2015) “Workfare and Human Capital Investment: Evidence from India” Mimeo.

59 Part of the broader Youth Employment Support Project, the objective of the Cash for Work programme was to provide additional income and temporary employment opportunities to vulnerable youth. Beneficiaries were entitled to a minimum of 50 days and a maximum of 75 days of work at a daily wage rate of Le 7,500 (or US$1.80 in 2012). Rosas, N. and Sabarwal, S. (2016) “Public Works as a Productive Safety Net in a Post-Conflict Setting Evidence from a Randomized Evaluation in Sierra Leone” Policy Research Working Paper No 7580. World Bank.

60 Entitled “Programa Jefes y Jefas de Hogar Desocupados”, the programme was introduced in 2002 as a response to the severe economic crisis. The programme required eligible unemployed household heads with dependents to work a minimum of 20 hours per week in training activities, basic community work, school attendance, or employment in a private company with a wage subsidy for six months. Juras, R (2014) “The effect of public employment on children’s work and school attendance: evidence from a social protection program in Argentina” IZA Journal of Labor and Development, 3(1):1-20.

61 The programme provides short-term work on labour intensive projects. The projects primarily consist of the construction and “upgrading” of roads, afforestation, and irrigation. Within districts, the programme is targeted to the poorest and most vulnerable villages. In 2012, beneficiaries were paid a lump-sum of 3600 Malawi Kwacha (approximately US$11) for 12 days of full-time work. De Hoop, J. and Rosati, F. C. (2016). Labor intensive public works and children’s activities: the case of Malawi. UCW Working Paper, Rome.

Case studies of three other school feeding programmes — in Uganda, Burkina Faso, and Laos — were limited to their impact on enrolment. The programmes in Uganda and Burkina Faso contributed to substantial enrolment gains; the impact on attendance of in-school meals (as opposed to take home rations) was especially large. The impact of the Laos programme was more limited, although this result was attributed in important part to difficulties in food distribution. Source: Do School Feeding Programs Help Children? From evidence to policy, A note series on learning what works, from the Human Development Network, World Bank, January 2012. http://siteresources.worldbank.org/INTHDOFFICE/Resources/SchoolFeedE2P.pdf.

97  The Programa de Ampliación de Cobertura de la Educación Secundaria (PACES) programme provided vouchers to children from families in the lowest income strata. The vouchers covered slightly more than half of the cost of private secondary school fees and were renewable conditional on satisfactory academic performance. Cities and towns used lotteries to allocate vouchers when demand exceeded supply. J. Angrist, E. Bettinger, E. Bloom, E. King, and M. Kremer: "Vouchers for Private Schooling in Colombia: Evidence from a Randomized Natural Experiment". American Economic Review, 2002, 92 (5): 1535-1558.

Endnotes

112 Mexico started to address the challenge of providing access to quality education in the 1970s with the establishment of a National Council of Education Promotion (CONAFE). In the early 1990s, CONAFE initiated the Compensatory Education programme (referred to hereafter as the CONAFE programme) with the aims of improving the quality of education in disadvantaged communities and reducing schooling inequalities. The CONAFE programme targets those schools with the lowest educational performance in highly disadvantaged communities. It now serves about 4 million students in preschool and primary education, and about 300,000 students in secondary education, in 44,165 marginalized rural and urban areas in all 31 States in Mexico.

116 The ILO-UN Global Compact Child Labour Platform (CLP), chaired by the International Organization of Employers and the International Trade Union Confederation, is comprised of companies from a wide range of sectors including telecommunications, garments, cocoa, cotton, and mining.

119 A similar exercise plotting child labour rates against some of the specific indicators making up the composite FSI index shows that each is positively correlated with child labour. These specific indicators include: external intervention, demographic pressure, refugees and internally displaced persons, group grievance, human flight, uneven development, poverty and economic decline, state legitimacy, public services, human rights, security apparatus, and factionalised elites.

121 See, for example, UNICEF and Save the Children Foundation, Small hands heavy burden: How the Syria conflict is driving more children into the workforce, 2 July 2015.

127 In 2012, a survey among country child protection coordinators showed that child labour had the highest average rating of gravity chosen from all fields of child protection in emergencies. Yet, only 18 per cent of practitioners felt that child labour issues were adequately addressed in early response activities.
